Lutron™

Introducing The Avant Collection™ by Lutron®

Letting light into our homes and controlling it with the touch of a button is powerful. It acknowledges daylight as a practical, sustainable light source and recognizes that technology has advanced to allow for its precision control.

Lutron, the world leader in light control, has once again brought innovation to the world of electronically controlled shades by creating new shading systems, new technologies, and by providing a palette of shading materials that brings complete solutions to life.

The Avant Collection by Lutron is a new chapter in precision control of shades that are innovative, customizable, and stylish.

Roman shades featuring CERUS™ safety technology
Style: Flat   Woven wood: Cheras - Walnut

Lutron® has taken drapery
in a whole new direction

An industry first – this entirely new type of window
treatment smoothly pulls the drapery up and
completely out of the way at the touch of a button.
The Kirbé™ vertical drapery system captivates with
its unique and unexpected motion.
NEW Kirbé™ vertical drapery system

Style

The Kirbé is currently offered with sheer fabrics that range from traditional neutrals to bold shimmering patterns.

Kirbé pleat
Unique, yet most similar to a ripplefold sheer.

Optional integrated Lutron® roller shade
Pair with a Lutron blackout roller shade for privacy and light blocking capability.

The finishing touch
Top with a Lutron cornice (pg. 16) to easily finish the look without the need for a recessed pocket.

Lutron® innovation

Kirbé™ eliminates "stackback" – the mass of fabric left when a traditional drapery is opened. The Kirbé can be used over French and sliding doors, windows alongside fireplaces or at the end of a hallway – anywhere one would wish to eliminate stackback.

The Kirbé vertical drapery system features a number of innovations that make rolling pleated fabric in a window treatment possible.

Header mechanism
Reliably and delicately smooths and pleats fabric as it is taken into and let out of the mechanism

Perma-pleat bottom bar™
Weights fabric and maintains a smooth and even pleat to keep drape uniform
Header mechanism   With optional roller shade

Header mechanism

Perma-pleat bottom bar

Kirbé sheer in Touch - Seafoam fabric shown above (also shown on cover)

NEW Roman shades with CERUS™ safety technology

Lutron® has revolutionized the design of Roman shades

Lutron has revolutionized the design of Roman shades by introducing CERUS™—Cord-Eliminating Roman Uptake System. This innovation allows for safer Roman shades by eliminating lifting cords typically associated with their construction.
Style

Roman shades are popular window treatments that offer an elegant use of
soft fabrics to not only control light, but to add a decorative element to a home.

Four styles allow for a customized look.

Flat
A simple, flat structure
with no seams or
horizontal stitching.
Best showcases a
fabric with pattern.

Hobbled
A tailored, cascaded
design with a waterfall
effect. Adds softness to
a space and showcases
how light plays off the
cascade of fabric.

Knife
A clean, modern,
flat style with distinct
horizontal seams.
Structured look lends
itself to formal spaces or
contemporary settings.
Casual
A softer, unstructured
shade. Looks best
with light-colored fabrics
with little or no pattern.

Depending on fabric and style, Roman shades can have a wide range of looks and applications.
They can have a formal appearance for a dining or living room or they may take on a casual look
in kitchens and bedrooms.

Lutron® innovation

About CERUS™ safety technology.
Eliminating cords from the traditional construction of
Roman shades has two major advantages.

Safer
CERUS safety technology allows for a safer Roman
shade system by utilizing uptake bands in place
of exposed inner cords. Inner cords may pose a
strangulation hazard to small children.

Improved performance
CERUS safety technology also allows for a quiet,
smoother, more even travel of the shade since a
cord is not stacking and slipping as it rolls.

CERUS uptake bands are color coordinated
to virtually disappear against Roman shade
linings when viewed from outside a home.

NEW Roman shades with CERUS™ safety technology

Style

Woven wood Roman shades can look casual for an informal setting or can equally suit a sophisiticated, contemporary space.
Flat
Flat style is offered, and allows for an appreciation of these intricate materials.

Edge binding
Edge binding is an option that involves wrapping the ends of a woven wood shade with twill or fabric. This option protects the ends of delicate grasses and reeds from fraying and adds a decorative flair.

Lutron® innovation

CERUS™ safety technology is standard for all Lutron Roman shades – soft fabric and woven wood construction.

CERUS uptake bands are light-permeable and have been paired to each woven wood so as to minimize disruption of light through the material.

Many woven woods permit views to the exterior, but function to shade an interior from solar heat and light. This is an intriguing optical effect similar to polarizing light.

Flat Roman shade in Cheras - Walnut woven wood shown above

NEW Lutron® finished draperies

Lutron® now offers finished drapery panels for use on our electronically controlled drapery track.

Lutron drapery systems are perfect for bedrooms. Use a dual drapery system — sheers provide light with privacy, and draperies darken a room for a good night's sleep.

Drapery systems also make a home more energy efficient by providing added insulation around windows when closed.

Specifying a drapery solution just got easier now that all components are available from Lutron – your single source.

NEW Lutron® finished draperies

Manual open carrier

Style

Pinch pleat is named for the pleated look created by pinched gatherings of fabric at the top of the drapery. Pins on the back of the drapery are simply looped through the carriers on the track when installed.

Ripplefold pleat style is named for the soft, consistent ripples created by the drapery as it hangs from the track. It offers an elegant, contemporary look.
The finishing touch: Top with a Lutron cornice (page 16) to easily finish the look without the need for a recessed pocket.

Lutron® innovation

Lutron drapery track systems feature a number of innovations:

Manual open carrier
The Lutron patented spring release system is field-adjustable to customize the force necessary to manually open a drapery. This provides access to the outside in the event of a power loss.

Self-aligning splice bar
Precision engineering aligns tracks within 1/16 inch tolerance. This allows for easier shipment of long drapery tracks in sections that are then assembled on the job site.

Custom curved track
Standard arcs as well as custom bends – up to 90° curves possible with a minimum bend radius of 20 inches.

Please refer to Lutron drapery catalog for a complete listing of features and system capacities: P/N 367-1527.

Self-aligning splice bar

Custom curved track

Lutron® now offers top treatments to easily finish a shading solution

Cornices may be used on the Kirbé™ vertical drapery system, traditional drapery systems, as well as Lutron roller shades. They afford flexibility as they permit outside mounts for shading systems with no need for construction of pockets.

Clean lines of a straight cornice lend themselves to a contemporary or transitional space. Select a shaped cornice for traditional décor.

The Avant Collection™ fabrics

Style made easy – Innovation made beautiful

The Avant Collection includes a new line of sheers, soft fabrics, and woven woods to finish your Lutron® shading system.

This new selection of over 100 new fabrics and woods offers a mixture of contemporary and traditional fashions. These materials can be used to construct your Roman shade, Kirbé™ vertical drapery, cornice or traditional drapery.

The following details can aid in ordering and installing The Avant Collection window treatments.

Privacy

Please note that some materials have open weaves. Although they may block outside views during the day, at night they may not provide sufficient privacy. To achieve privacy for the Kirbe™ vertical drapery system, pair with the optional roller shade feature. For woven wood Roman shades, use a fabric lining.
Roman shades

Soft fabric Romans must be lined. Woven wood Roman shades do not require lining.

Railroading

Railroading fabric is an option for applications that require shades wider than the usable roll width. Railroading rotates fabric 90 degrees from its typical orientation. Please note: If the fabric has a distinct pattern, this pattern will be rotated 90 degrees, thereby altering the final appearance of the shade.

Standard fabric orientation

For applications within the usable roll width

Railroaded fabric orientation

For applications wider than the usable roll width
Customer's Own Material (COM)

COM may be used to create Roman shades, drapery panels and cornices. Contact Customer Service for more information on submitting COM for testing and approval.

Fabric relaxation

Soft fabrics have not experienced gravity. They have been stored on a roll until made into a drapery or Roman shade. It is natural for fabrics to "relax" and sometimes lengthen over time. When measuring for drapery length, please allow proper clearances for sills and floors. Lining drapery adds structure and can minimize relaxation.

Woven woods are a natural and sometimes heavy shading material. These materials may relax over time as well.

Consolidating orders

Fabric and woven wood samples aid in material selection. Fabric runs and woven wood dye lots are subject to subtle variation. When ordering multiple shades for a room or home, it is best to place the entire order at one time, as opposed to breaking up the order. This will ensure consistent color across all shades on a project.

The Avant Collection™ binder

Avant Collection soft fabrics, woven woods, sheers and liners are showcased in the fabric binder. Soft fabrics are separated by color group and sheers, and linings in order to simplify the selection process. Each section indicates which style of window treatment will work best with each material. All samples are easily removable and include key material information.

Additional material samples

Larger material samples are available for order by the yard, to assist with the final decision process.

The Avant Collection binder and larger samples may be ordered from the SCT or by contacting Lutron® Customer Service at 1.888.LUTRON1.

Total light control

Single room solution:
GRAFIK Eye® QS with wireless technology

(not actual size)

The GRAFIK Eye QS is a fully customizable preset light and shade control system, providing convenient control, energy savings, and enhancement of the visual environment, now incorporating Lutron's Clear Connect™ RF Technology for effortless communication.

Visit **www.lutron.com/grafikeyeqs**

Whole-home control:
RadioRA® 2

(not actual size)

RadioRA 2 is a wireless control system that provides convenient and intuitive control of lights, shades, audio-visual devices and temperature in a single room or throughout an entire home. What's more, because it uses Lutron's Clear Connect RF Technology, you can rest assured that it will work every time.

Visit **www.lutron.com/radiora2**

Lutron® has been the world's leading manufacturer of lighting controls and systems for over 45 years. With the addition of shading solutions, Lutron has opened a new world of possibilities by seamlessly integrating electric and daylight control with a focus on innovation, world-class engineering, and customer service. Lutron blends technology with design and environmental sensitivity to provide the ideal solution for total light control.
