

Soltice® II Recliner ■

Enhanced versatility for healthcare facilities.

- Durable
- Intuitive
- Elegant

Furnishing Knowledge®

■ **Soltice: The versatile recliner for ever-changing patient needs.**

**One recliner. Many applications.**

The Soltice II Recliner has ample proportions and sturdy construction allowing it to accommodate all body types up to 750 pounds. Its recline release feature is fingertip-activated, making it easy to use. With a full range of options including a tablet arm, IV pole, catheter hook and magazine pouch, it suits the needs of various treatment areas within a healthcare facility. By combining KI's palette of wood finishes with unlimited upholstery options, the Soltice II Recliner offers a visually pleasing aesthetic.

The footrest stows neatly out of the way when not in use.

Central-locking casters allow caregivers to simultaneously lock casters ensuring stability.

The 360-degree rotation stays within the recliner's footprint, allowing it to fit in corners and other tight spaces.

Applied to the back of the recliner, Seam Saver™ protects seams from daily use, damage or wear and tear, extending the life of the upholstery.

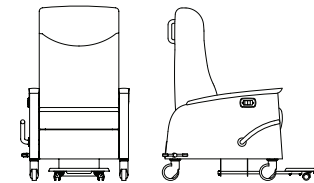

**Soltice® II Recliner**

The environment in a healthcare facility is constantly changing, and the needs of patients, their families and medical staff change with it. That is the inspiration behind the new Soltice II Recliner.

The Soltice II Recliner accommodates the need for comfort and safety. With its 360-degree rotation and central-locking casters, it also allows caregivers to do their jobs more easily. Its simple, elegant design coordinates with other Soltice products to create a consistent look throughout a healthcare facility.

Designed by Daniel Cramer and Paul James, the versatile Soltice II Recliner can be configured for use in various areas within a healthcare facility. The result is a responsive healthcare solution that is durable, intuitive and elegant.
