

Shown: Unison Casegood

Unique by nature, distinctly yours

Every piece of wood is unique, like a fingerprint. No two pieces are exactly alike and each has its own characteristics. Wood is strong and beautiful, warm and familiar, always distinctly individual. More than any other material, wood creates furniture that grows more beautiful the longer it's enjoyed. For nearly a century, we've built wood furniture that celebrates those qualities, and respects their natural origins.

Our lifelong passion

We carefully analyze the environmental impact of every phase of the product life-cycle, from raw materials through the end of a product's useful life. The results are environmentally responsible methods of wood furniture craftsmanship that have set the standard for the industry.

Life-cycle thinking

Materials

We carefully select our wood suppliers and conduct regular environmental and quality audits. FSC and SFI certified woods are available. Particle board is 100% recycled content, and wheatboard is available. Our material usage is designed to minimize waste.

Production

Our wood manufacturing facility in Michigan is the first manufacturing facility in the U.S. to receive LEED® certification from the U.S. Green Building Council. Our water-based glues, stains, topcoats and UV finishes are nearly VOC-free.

Transportation

We source almost all of our wood from forests in North America, reducing shipping distances for raw materials. Products can be shipped to customers blanket and stretch wrapped to minimize packaging. Pallets enable more products per shipment.

Use

Designed for a long life, furniture is reconfigurable for reuse and modular segments can be replaced. Water-based UV finish technology gives an extremely durable finish that is repairable should anything happen. Steelcase offers many products that carry the Scientific Certification Systems Indoor Advantage™ certification for indoor air quality in North America.

End of Life

The Steelcase Environmental Partnership Program helps connect customers to environmentally responsible methods of managing products at the end of life phase, keeping our products out of landfills.

LEED certification

Wood products from Steelcase can help companies earn LEED® certification for their building or interior project (the U.S. Green Building Council's Leadership in Energy and Environmental Design). Steelcase will work with you individually towards your LEED® application.

Environmental leadership is an ongoing commitment and encompasses much more than just our wood solutions. To learn more visit www.steelcase.com.

Design with purpose

Behind every wood solution from Steelcase, is a deep commitment to understanding our customers' needs. We observe, we question, we listen and we learn about how people work. Why are we so inquisitive? Because this knowledge enables us to design office solutions that create a better work experience. We'll even tailor a solution if one of our standard products isn't exactly what you desire. The result is beautiful wood solutions that can help to attract and retain valuable knowledge workers and help them to be more effective and efficient.

The most comprehensive wood offering in the industry

With the most extensive wood offering in the industry, you have the freedom to create a wood solution that truly reflects who you are. For nearly a century, Steelcase Inc. has been creating wood solutions that satisfy a broad range of design-sensitive styles – from contemporary to traditional. Our offering supports solutions in open plans, private offices, meeting rooms and in-between spaces for a wide array of businesses. Our extensive palette of high-quality veneers, finishes and detailing allows you to create a solution that is distinctly yours.
