

## STATE OF THE ART CONSTRUCTION

### Crystallized Line of Furniture by RWLUX

RWLUX manufactures its line of furniture in Argentina with the support of one of the most renowned manufacturer in the country by combining different elements in our construction process where we have achieved a comfort level that characterizes our furniture not only for its beauty but with some elements that add true comfort to our furniture such as:

**FRAMES:** Frame construction is a vital key to lasting strength and durability. We use 5/4" solid, engineered or a solid/engineered combination of kiln dried hardwoods (maple, poplar, among others). For added solidity our frames /joints are double-doweled, wood glued, and high-pressure stapled, with corner blocks screwed into place.

**CUSHIONS:** We feel cushioning is the true source of any chair's power to please. Our Product Development team directed by PEDRO RIVERA WIENER, the Line's designer is obsessed with creating the most luxurious cushioning. We offer cushions in standard, comfortable filled, and are ready to deliver our cushions hand-stuffed for pure comfort. We offer the right blend for softness and durability.

**THE SWAROVSKY element in our Crystallized Furniture Collection:** Swarovski is the world leader in precision cut crystal. The company which has remained fully independent since its foundation in Austria, in 1895, employs around 20,000 people to create and maintain a presence in more than 120 countries. The company, supports RWLUX and our Furniture Line's creator, Pedro Rivera Wiener since the conception of the line and continues supporting him for future product development to guarantee the richness and exclusivity of the Crystallized furniture collection.
