Propeller[®] Finishes

The Propeller[®] palette of paints, laminates and veneers ensures a harmonized aesthetic throughout the entire workplace. Use this guide to develop a rational and comprehensive approach to designing a Propeller workplace from a single, unified palette.

Balancing materials and enhancing the character in any architectural setting, the Propeller finishes palette includes three metallic paints, nineteen laminates and twelve natural and Techgrain[®] veneers as well as ten molded, translucent and opaque accent edgebands.

The Propeller finish palette has been created using environmentally-friendly technologies, including water-based and powder coating paint methods, and can help to achieve U.S. Green Building Council LEED[®] credits.

The samples shown here are representative of our paint, laminate and veneer finishes. For further information, or a Propeller brochure, please consult a Knoll dealer or KnollStudio sales representative.
