AFG Solarshield™ Tinted Glass

AFG offers tinted glass products for commercial and architectural glazing and for automotive applications. The lower solar light transmission of AFG's Solarshield™ Bronze, Gray, and Green glass helps reduce glare. By absorbing the sun's heat, it reduces energy consumption, creating a more comfortable interior without obscuring the view outside. It's ideal for warmer climates where air conditioning costs are greater than heating costs, helping you stay cooler and save energy dollars. Now, you can count on glass as your window to the world and as an energy saver.

Applications:

- Windows
- Storm windows
- Storm doors
- Patio doors
- Skylights
- Atriums
- Insulated Glass
- Entrances and Storefronts
- Spandrel Glass
- In conjunction with Low-E glass
