

Up. Down.
All around.

Up's patented center post facilitates multiple set-ups and maximizes opportunities for configuration. In tandem with the system's unique cantilever support, the possibilities seem endless. Up gives you the flexibility to go in any direction and to work at the height you choose.

Start here. Go anywhere.

up
post-and-beam system

The shape of the modern workplace.
Up is post and beam.
Done right.

Innovation

Up incorporates a unique cantilever support system. Components can be configured in multiple positions and heights, and the system is designed for simplicity in shipping and assembly.

Function

Up provides options and features that go beyond those of other desk, panel and post-and-beam systems. Up is an all-in-one design solution that creates a combination of work environments and product solutions for any direction.

Aesthetics

Up is a contemporary office furniture solution designed to incorporate fine details that provide a sense of continuity throughout the workspace.

Up is flexible. Up is attractive. Up is open.
Up is adaptable. Up is sturdy. Up is sleek.
Up makes the workplace better.

Plan for any direction.
Because good work happens in
great spaces. And the right angle
doesn't have to be 90 degrees.

Integration for a collaborative workplace.
Up is post and beam.
Done right.

Right where you want it.

Integration
Up is practical, with storage that integrates seamlessly into the workspace. Space planning is optimized with worksurfaces that connect directly to the storage.

Intelligence
Up facilitates maximum storage in a minimal footprint using innovative space management solutions. Tackboards, whiteboards, and accessory panels ensure that no vertical surface goes unused. Horizontal surfaces serve as seating, space dividers, and secondary work areas.

Plan it. Move it. Connect it. Adjust it. Organize it.
Integrate it. Change it. Store it. Divide it. Use it.
Up makes it all easy.

Interactive
Up is organization simplified. Towers include integrated power and data troughs that carry cables between workstations. Plus, power and data can be accessed at key locations within the storage.

Ergonomic

Up storage accommodates the full range of worksurface height adjustability with integrated worksurface support. Compact storage areas are easily accessible via tambour doors and drawers with flush handles.

Personal

Up is not all business. Secondary drawers and cabinets offer private storage space for personal items.

Let your vision take shape.
Your work has integrity, inspiration, and style.
So should your workplace.

Adaptable

The trunk has an optional and reversible top cabinet that resolves many storage tasks while transmitting natural light.

Up is the highest
common denominator.

Comfort and aesthetics are factors in
performance because people do more
in environments that treat them well.
Versatile, functional, and attractive, Up is
the meeting place of form and function.

Minimal components.
Maximized potential.

Versatile

The Up system builds on
a surprisingly small array of
components for a broad range of
configurations. Beyond desking
and divisions, the system includes
peripherals that enhance flexibility
and functionality in the workplace.
From individual workstations and
team environments to reception
and the boardroom... the look
is consistent and the effect is
considerable.

Right for you.
Right for the world.

Tayco is dedicated to increasing workplace productivity through systems and solutions that show a genuine concern for the environment.

Up's support structure, frame, and support components are manufactured entirely from recyclable materials. Its worksurfaces and solid privacy screens are made with low-VOC materials. Throughout the system, plastic components are used sparingly. Up is assembled with water-soluble adhesives and mechanical fasteners. Up is GREENGUARD Certified for indoor air quality and complies with low-emitting materials LEED credit 4.5 (systems furniture and seating). The way we see it, caring about the world is essential to feeling good about the workspace.

Designed at Tayco.
By Dakota Kasdorf.

Canadian designer Dakota Kasdorf, BID, studied architecture, engineering and industrial design at Carleton University in Ottawa. Graduating with a bachelor of industrial design with high distinction in 1990, he has dedicated his career to office furniture design.

Dakota's approach begins with the simple philosophy that everyone has the right to be happy and that the objects we interact with on a daily basis should contribute to our happiness. Furniture, by design, has a direct impact on people's lives. It is both functional and decorative. It performs a task and defines a space. Furniture should have significance beyond its physical presence.

With Tayco's patented and award-winning Up post-and-beam system, Dakota created something that breaks with the utilitarian aesthetic that defines most of the current market. It's a system that is greater than the sum of its parts. Up is beautiful from a distance, but also stands up to close contact and exploration. It achieves a working balance of comfort and visual appeal.
