SIOUX is a family of lights made up of table, floor and suspension lights of different sizes. Its shade, made up of several sheets of wood veneer strips, gives it a look similar to those found in feathered headdresses of the North American Indians. These pieces can be made in seven different colours allowing you to create mono colour, bi colour and multi coloured shades.

The relationship between the shade and the metallic structure is a relationship of contrasts, the lightness of the shade against the weight of the structure, warmth and coldness, craftwork verses techno.

The SIOUX family has a modular program, which allows for the construction of large clusters of lamps for public spaces. This program takes advantage of both walls and as ceilings an coring points, and of joints of 90° and 120° as well as variable angle joints, which gives it great versatility in creating lamp clusters adjustable to all types of environments.
