PLEASE TOUCH PILLOW

THERMOSENSITIVE

The Please Touch Pillow brings an interactive dimension to contemporary living. It is a unique thermosensitive object that shifts color in response to body heat. A simple touch activates its color-changing properties and leaves behind a temporary mark of the hand or body in a new and unforeseen color. The mark lingers for several seconds and then shifts through multiple shades of color before gradually fading away, (1). A warm environment will also initiate the color-changing process and cause the pillow to shift from brown to green and blue (2).

PLEASE TOUCH PILLOW

THERMOSENSITIVE
