

Ideal alternative
to perc and other
flammable solvents.

- Uses water and complies with OSHA, EPA and other environmental, anti-pollution regulations.
- No polluting fumes vented into the atmosphere.
- No hazardous waste to haul away.
- Satisfies landlord pollution concerns by eliminating ground, air or aquifer contamination caused by spills or solvent emissions.
- Eliminates filter, still, button trap and water separator maintenance and record keeping.
- Produces exceptional results and fresher, cleaner garments.

Comply with environmental
regulations with a Wascomat
Wetclean System.

**"My landlord would not renew my lease until I installed
a Wascomat Wetclean System."**

"After 11 years my landlord made a decision not to renew leases to drycleaners that use Perc. I installed a Wascomat Wetclean System and my landlord renewed my lease. I saved my business and also protect my health and the health of my workers. I am very pleased with the wetcleaning results." - Yong Chon, One Day Cleaners

**"I could not operate our business without Wascomat
wetcleaning machines."**

"We have three 80-pound Wascomat wetcleaning machines in constant use. Our Wascomat Wetclean Systems are essential to our cleaning and laundry business." - Michael Anthony Jones, Highland Cleaners

"The results are superior."

"We are using two Wascomat Wetclean Systems and the results are superior." - Victoria Aviles, Bridge Cleaners

Wetcleaning by Wascomat

Grow your business and increase your profits!

Wascomat Wetclean Systems eliminate the need to pre-spot since the majority of stains are water-based. Even dry-side stains can be removed by batching with the aid of modern water-based biodegradable paint, oil and grease removers. Setting stains with heat is not a concern because you can examine and treat problem garments before transferring to the dryer.

The Wascomat difference.

Wascomat was first to address solvent-free cleaning by developing a way to tame water. With a Wascomat Wetclean System, you don't need to worry about shrinkage, felting or dye bleeds. For most garments, our specialized equipment can handle all aspects of the cleaning and drying process.

Wascomat's wetcleaning washer combines the gentle process of hand-washing with the efficiency of professional cleaning. With a Wascomat Wetclean System you'll be able to clean garments that until now were considered dryclean only.

Best of both worlds.

Wascomat dual-use Wetclean Systems are an environmentally safe, non-polluting complement to drycleaning. With the push of a button, the Wascomat Wetclean Washer converts to an ideal washer for laundering shirts, comforters, drapes and "wash-dry-fold" laundry.

Environmentally safe.

A smart addition to conventional drycleaning methods, Wascomat's Wetclean Systems comply with OSHA, EPA and other environmental regulations while producing outstanding results. Gone are the solvents, toxic fumes and waste treatment problems associated with the drycleaning process. Expensive ventilation systems are no longer needed.

Customers prefer wetcleaning.

Your customers will immediately see, feel and smell the difference in their clothing: colors are brighter, fabrics softer, and the smell is delightful.

95% of all stains are water-based and respond better to wetcleaning. You can even wetclean leather and garments with beads and sequins!

No need to sub-contract specialty work!

With a Wascomat Wetclean System, you will have the ability to clean most garments in-house:

- Wedding gowns
- Delicate hand wash items
- Garmet restoration
- Waterproofing
- Leather and suede
- Full service shirt laundering
- Traditional laundry - bed sheets, blankets, comforters and more.

TD Dryer with RMC

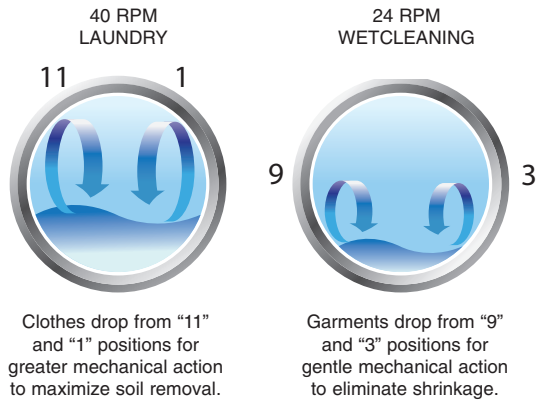

Dual-use Wetclean Washer

It's about precise control of the cleaning process.

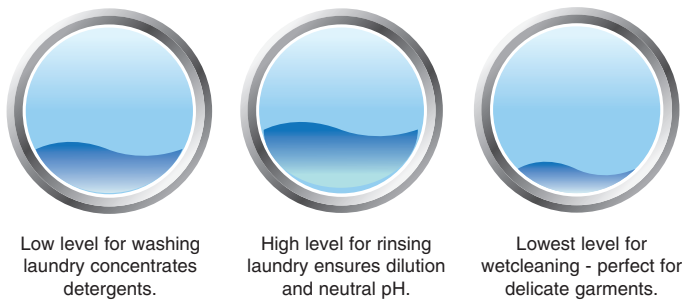

Wascomat's "Dual-use" Wetclean washers are equipped with Clarus® Control for superior cleaning results and flexibility. Clarus manages wetcleaning and laundry washing processes by precisely controlling all important functions:

Control exact cylinder rotation in washing, rinsing and extracting.

Clarus Control lets professional cleaners program the washer for the exact desired rotation speed to safely wetclean and launder the broadest range of garments and fabrics.

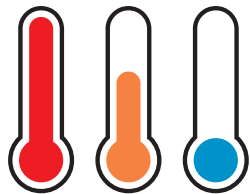

Control exact water level.

Control exact temperature.

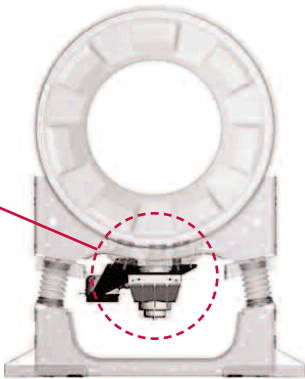

- 150 degrees: Higher temperature for better soil removal and proper bleaching.
- 80 degrees: Ideal for wetcleaning.

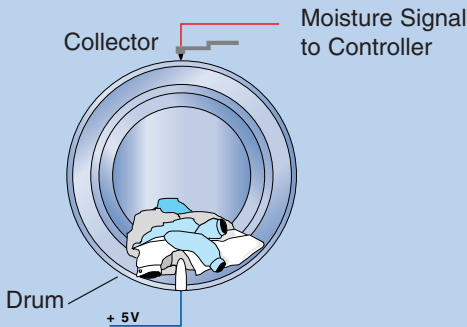

Control exact usage of chemicals.

Regulate the wetcleaning and laundry chemicals to the exact ounce for maximum protection and soil removal without wasting money on excessive chemical agents.

Wascomat wetcleaning washers feature larger sumps to thoroughly mix water and additives prior to coming in contact with the garments.

Wascomat's **Wetclean TD Dryers** include our exclusive and fully-automatic Residual Moisture Control (RMC) system.

A low voltage current is passed through the laundry by specially insulated lifters. The moisture is measured 400 times per second and the drying process stops when the precise pre-set moisture level is reached.

RMC prevents damage to garments caused by overdrying and reduces lint and wrinkles. The amount of residual moisture in the fabric is important for proper finishing. By not overdrying, you'll benefit from longer linen life and significant labor and energy savings!
