

Glimmer™ Seating ■

Visually exciting seating at an affordable price.

- Simple yet dramatic design
- Unexpected comfort
- Remarkable durability

■ **Strong design. Strong value.**

Glimmer™ Seating

Glimmer is designed to maximize both visual excitement and physical comfort. Yet, it is tough enough for rigorous use.

Dramatic Design

Unique back angles and surface planes are a pleasant surprise. The strongly angled back introduces architectural interest in a most uncommon chair. The seat's front lip and pillar arm provide finishing touches.

Comfort

The curved back comfortably fits your back while the sculpted seat minimizes pressure points. A generously sized seat is a welcome feature. Leg room is maximized by the set-back arms. Plus, slanted arm caps provide a more natural armrest.

Durability

Glimmer is designed to withstand hard use. Heavy-duty polypropylene with greater rigidity creates a strong and durable chair.

Bring energy to any environment

Designed by Francisco Romero, Glimmer seating is available as 4-leg chairs with casters or glides, task chairs, and task stools. Select all poly, poly backs with upholstered seats, or upholstered seats and backs. Choose either arm or armless.

Glides

Glides blend with the frame and are field replaceable with locking casters.

Locking Casters

Nylon casters provide easy mobility.

Stacking

4-leg chairs stack up to eight high on the dolly for efficient use of space.

Arm Caps

Slanted arm caps provide a more natural armrest.
