Christner, Inc.
St. Louis, MO

Creating a cost-effective, contemporary facility that supported a liberal arts mission was a critical objective in the design of the St. Louis College of Pharmacy's 35,000 square foot academic building. The college, one of the oldest of its kind in the United States, is located in a historic section of St. Louis, MO. ■ The new, state-of-the-art academic building plays an integral role in enhancing the college's overall image and provides students with high-quality educational space. According to Beth Worthington of Christner, Inc.

and Interior Designer on the project. "Our approach to the project was to create an academic space that not only supported educational development, but an environment that students would be proud to call home." ■ The resulting building houses classrooms, seminar rooms, conference spaces, faculty offices and a multi-purpose auditorium. KI furniture was used throughout the facility. Worthington cites product reliability and KI's commitment to stand behind its product as important factors in selecting the furniture.

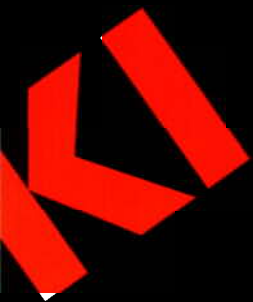

Product flexibility for easy reconfiguration and product durability in heavy use areas were also important to the college. ■ Kl chairs were chosen specifically by instructors and students during an independent testing of several chairs for comfort. Worthington added, "The college really put the needs of the students first. Student comfort that promotes the learning effort was very important."
