Moonstone multisize package

Moonstone uses digital inkjet technology to convey the warmth of stone, reproducing scanned images of the original material on the ceramic surface. To create the various 40x80 cm tiles, 40 different types of stone were scanned (>12 sq.m); for 50x50 cm (20"x20") tiles, 70 types were scanned (>17 sq.m). Moonstone can be used as a floor tile.
