950 Series Custom File Specifications

General Guidelines for Component Arrangement

- The total of drawer and door heights cannot exceed the interior height of the case.
- If total component heights do not equal the available vertical space in a custom file case, 3''(76mm)-high filler panels are used to fill the remaining space. These must be specified and assigned a component position number within the case.
- Individual components should be specified in descending order, starting at the top position in the case.
- **No more than four (4) 3''(76mm)-high drawers or roll-out shelves can be placed in one file case.**
- **Receding doors are used to cover roll-out or stationary shelves, and must be specified separately.**
- **3''(76mm) drawers or roll-out shelves cannot be configured in the bottom location.**

Receding Door / Shelf Configurations

Multiple roll-out or stationary shelves may be stacked behind one receding door.

A single-shelf or a multiple-shelf combination must be specified for the space behind each 6''(152mm)-, 9''(229mm)-, 12''(305mm)-, or 15''(381mm)-high receding door.

Shelves within each configuration must be specified individually, beginning with the top-most shelf position.

In some cases, the single shelf or total configuration dimension will be less than the available vertical space. In each case, the remaining 3''(76mm) space will be at the top, behind the receding door. **A 3''(76mm)-high roll-out shelf cannot be specified as the top component behind a receding door.**

Example: 6''(152mm) receding door can be specified with one 6''(152mm) roll-out shelf or one 3''(76mm) roll-out shelf only.

6''(152mm)-, 9''(229mm)-, 12''(305mm)-, or 15''(381mm)-high shelves must be individually specified as either **roll-out** or **stationary**. 3''(76mm)-high shelves are available in roll-out style only.

The chart below lists the suggested shelf configurations that are possible behind receding doors of various heights.

Receding Door Height	Shelf Configurations
6''(152mm)	3''(76mm)-high roll-out shelf OR 6''(152mm)-high single shelf
9''(229mm)	6''(152mm)-high single shelf OR 9''(229mm)-high single shelf OR 3''(76mm)- and 3''(76mm)-high combination stack OR 6''(152mm)- and 3''(76mm)-high combination stack (in this order)
12''(305mm)	9''(229mm)-high single shelf OR 12''(305mm)-high single shelf OR 3''(76mm)-, 3''(76mm)-, and 3''(76mm)-high combination stack OR 6''(152mm)-, 3''(76mm)-, and 3''(76mm)-high combination stack (in this order) OR 6''(152mm)- and 6''(152mm)-high combination stack OR 9''(229mm)- and 3''(76mm)-high combination stack (in this order)
15''(381mm)	12''(305mm)-high single shelf OR 15''(381mm)-high single shelf OR 3''(76mm)-, 3''(76mm)-, 3''(76mm)-, and 3''(76mm)-high combination stack OR 6''(152mm)- and 6''(152mm)-high combination stack OR 6''(152mm)-, 6''(152mm)-, and 3''(76mm)-high combination stack OR 6''(152mm)-, 3''(76mm)-, 3''(76mm)-, 3''(76mm)-high combination stack (in this order) OR 12''(305mm)- and 3''(76mm)-high combination stack (in this order) OR 6''(152mm)- and 9''(229mm)-high combination stack OR 9''(229mm)- and 6''(152mm)-high combination stack

950 Series Custom File Specifications

Tie-Bar / Posting Shelf	<p>The tie-bar is a 1''(25mm)-high structural member located on the file unit front under the case top or between components. It contains the lock or the lock knock-out. A posting shelf option, which replaces the tie-bar, is available on four-high and five-high files only. This feature is available in select combination files or is specified in custom files when selecting the desired case.</p> <p>A structural tie-bar or optional posting shelf on a custom unit will automatically be placed in the first available space starting at 36''(914mm) from the bottom of the case. Depending on how the file is configured, the tie bar/posting shelf could be located as low as 24''(610mm) from the case bottom.</p> <p>For instance, in a five-high case with two (2) 12''(305mm)-high components in positions one and two (counting from the top), the posting shelf will be located 36''(914mm) from the bottom of the case.</p> <p>In a five-high case with one (1) 15''(381mm)-high component and one (1) 12''(305mm)-high component in positions one and two, the posting shelf will be 33''(838mm) from the bottom.</p> <p>THERE IS NO OPTION FOR SPECIFYING THE POSITION OF THE STRUCTURAL TIE-BAR OR POSTING SHELF WITHIN THE LATERAL FILE CASE. THE POSITION WILL BE ASSIGNED BY HAWORTH BASED UPON THE DRAWER CONFIGURATION SPECIFIED.</p>
Custom File Order Form	<p>Use the Haworth custom file order form on page 372 and make a photocopy for each custom file size and component configuration required. Complete the custom file order form(s) and attach to a Haworth order form with all other information completed. Enter the words "custom file" on the Haworth order form under "description." Transfer unit and total prices for each complete file unit from the custom file order form to the Haworth order form.</p> <p>The custom file order form contains a simplified elevation diagram showing the file interior heights and outside width dimensions. This scaled guide may be used for indicating the positions and heights of interior components. Completing the diagram is optional.</p>

Custom File Order Form Instructions

1. Enter Quantity

One order form must be prepared for each file type, edge detail, size, finish color, and component configuration. Enter quantity of like units in the box provided.

2. Draw File Elevation

- A. As an option, use the file front elevation diagram on the order form to indicate the height and width of the file case you are specifying. Use the three-inch spaced incremental marks to identify the component heights and locations within the file case. This will help you in step 4 to list the components in descending order from the top of the case to the bottom.
- B. A horizontal tie bar, which contains the optional lock, or a specified posting shelf will automatically be placed within the stack of components and does not need to be included in your drawing. The tie bar or posting shelf will be placed between components in the first available position down from the top within the 36"(914mm) to 24"(610mm) space above the floor of the case.

3. Specify Case and Trim Color

- A. Select a file case from pages 369-375 and complete the specification number on the line provided. Be sure to consider the following:
 Radius- or Square-edged case
 Locking or Non-locking
 Factory-installed counterweights (two-high standard and credenza cases only)
 Posting shelf (four- and five-high cases only)
- B. Indicate trim color for the case in the space provided. The tie bar or posting shelf will automatically be finished in the trim color selected for the components (4C., below).
- C. If building a custom credenza file, specify credenza file top if it is not being installed under a systems or freestanding steel worksurface. Enter selection on your purchase order, not the custom file order form.

4. Specify Components and Trim Color

- A. Select interior components from product options on pages 376-383. List the component specification numbers in order on the lines provided beginning with the top of the case and working toward the bottom. The top component will be in position 1, the next component down will be in position 2, and so on.
- B. A receding door and the shelf or shelves behind it should all be listed with the same position number. In the list, always place the receding door first, followed by the shelf or multiple shelves in descending order. When specifying 3"(76mm) roll-out shelves, see page 372 for additional instructions.
- C. Indicate one trim color for all receding doors, drawer fronts, or filler panels. This color can match the case color specified or can contrast with it. Shelves behind receding doors will always be finished in standard black paint and color need not be specified. Drawer bodies and all accessories will also be black. The tie bar or posting shelf will automatically match the external trim color of the components.

HAWORTH®

Photocopy and attach completed form to Haworth Order Form or your purchase order. Enter line item as "custom file." Enter unit costs and extension. Follow instructions provided in the price list for specifying custom files.

1. Enter Quantity

- Indicate quantity for each custom file of the same size, component configuration, and trim colors.

2. Draw File Elevation

- As an optional step, draw lines to indicate case width and height. Use the 3''(76mm) incremental marks as guides for placing components within the case.
