

3-Diculous

Interlam is pleased to announce the debut of an exciting and versatile product named "3-Diculous". This product is available in sizes up to 48" x 96" and is fully customizable in color and image type. The combinations of improved digital technology, cutting edge computer programs and recent advances in large format presses have come together to form a product specifically designed to offer an innovative and dynamic way to communicate your advertising or display concepts.

3-Diculous utilizes only "UV Ink" which has the following guarantees for color fastness and durability:

- > Raw exposed to direct sunlight - 2 years
- > Laminated – 5 years
- > Behind glass –Interior 5 + years

All of the 3-Diculous products are treated prior to printing to allow the UV Inks full adhesion to the substrate and finished with multiple layers of varying degrees of opaque white UV Ink. This creates a scratch proof, peel proof product second to none in the industry.

Examples of product use:

- > POP Displays
- > Backlit displays- Perfect alternative to neon signage
- > Light fixture Diffuser
- > Wall mounted displays (Lobbies, Kiosks & Store Fronts)
- > Ceiling Panels
- > Window Privacy Screens
- > Shoji Japanese Door Panels
- > Corporate entry ways

3-Diculous cannot exactly be replicated on a computer screen. Our sample gallery will allow you to view the concept by way of anaglyph files viewed through 3D glasses (which we will supply free of charge request glasses). The black & white files can be viewed using the supplied glasses. The files provided in color are merely a representation of the finished product and can be manipulated to include any combination of colors from the known spectrum. Flame spread rating & smoke development is currently being tested and is not yet available. We will post the data as it becomes available.
