CONTURA

INSPIRED SOLUTIONS REQUIRE TOTAL CREATIVE FREEDOM AND RELIABLE COLLABORATION.

- CONTURA is designed to finish the edges and transitions of suspended acoustical or drywall ceilings.
- CONTURA provides an extensive offering of standard shapes and we encourage the development of custom solutions.
- CONTURA can be curved in both planes and twisted through space.
- CONTURA defines ceiling edges with clean crisp lines or subtle movement.
- CONTURA is Green by Design. Extruded with 66% recycled Aluminum - 33% post-consumer and 33% post-industrial content. CONTURA can provide (2) U.S. Green Building Council LEED® 1 points for Credits 4.1 & 4.2. In addition, CONTURA's standard finish contains no VOC's, heavy metals, or hazardous waste.

Finishes

- Acrylic "Wet" Paint
- Standard Powder Coat
- ACROGUARD™ High Performance Powder Coat
- Kynar® 2

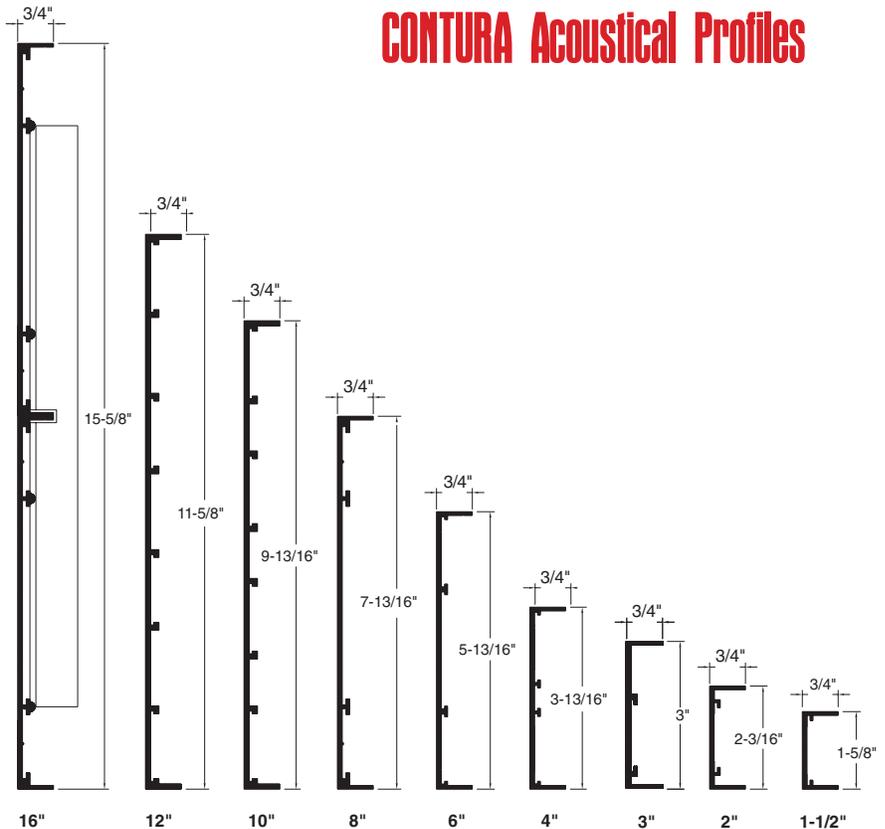

ACOUSTICAL

A large selection of trim heights from 1-1/2 to 16 inches is available to create innovative designs ranging from streamlined and graceful to bold and powerful. Extruded aluminum profiles offer the necessary curving flexibility, yet provide the durability required for handling and installation.

Gordon offers custom fabrication of CONTURA profiles, from curving and corners to combining different profile heights by stacking and welding. When curved or arched, CONTURA provides an attractive finish for open plenum systems such as BEAM•MATE and curved metal ceiling systems such as ALUMA•VAULT. Factory finishing is available in any standard Gordon paint color and custom color matching is readily available.

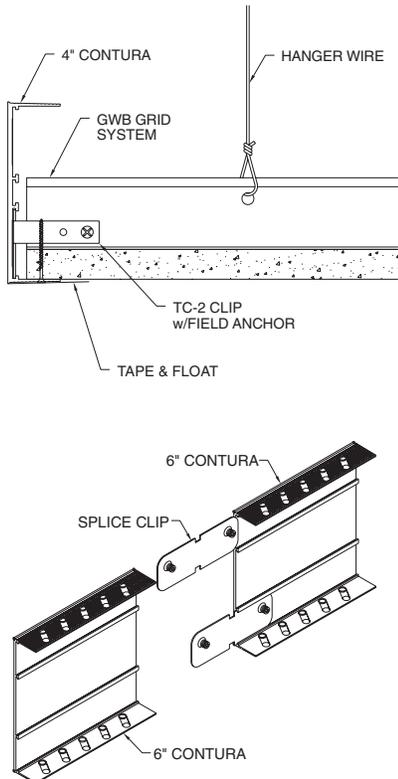

CONTURA Acoustical Profiles

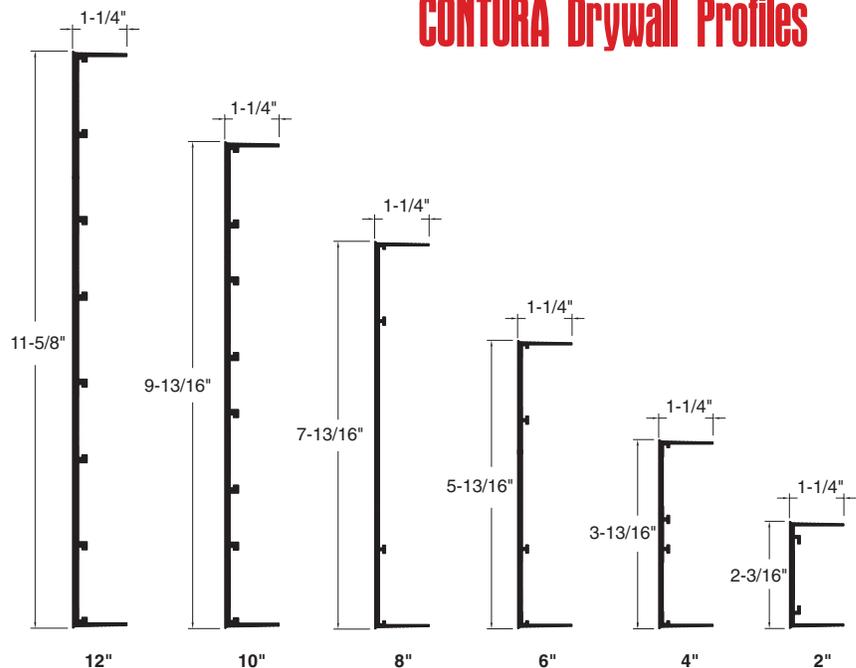

DRYWALL

Gordon offers a unique extruded aluminum drywall trim that provides easy installation and a seamless appearance that can only be achieved with a one-piece profile. Drywall CONTURA is provided with pre-punched tapping flanges that can easily be taped and floated into an existing drywall soffit or ceiling condition. Custom fabrication is available with all drywall profiles including straight, curved and corner configurations.

Drywall profiles are pre-coated in an alodine finish for field painting. Factory finishing is also available in any standard Gordon paint color and custom color matching is readily available.

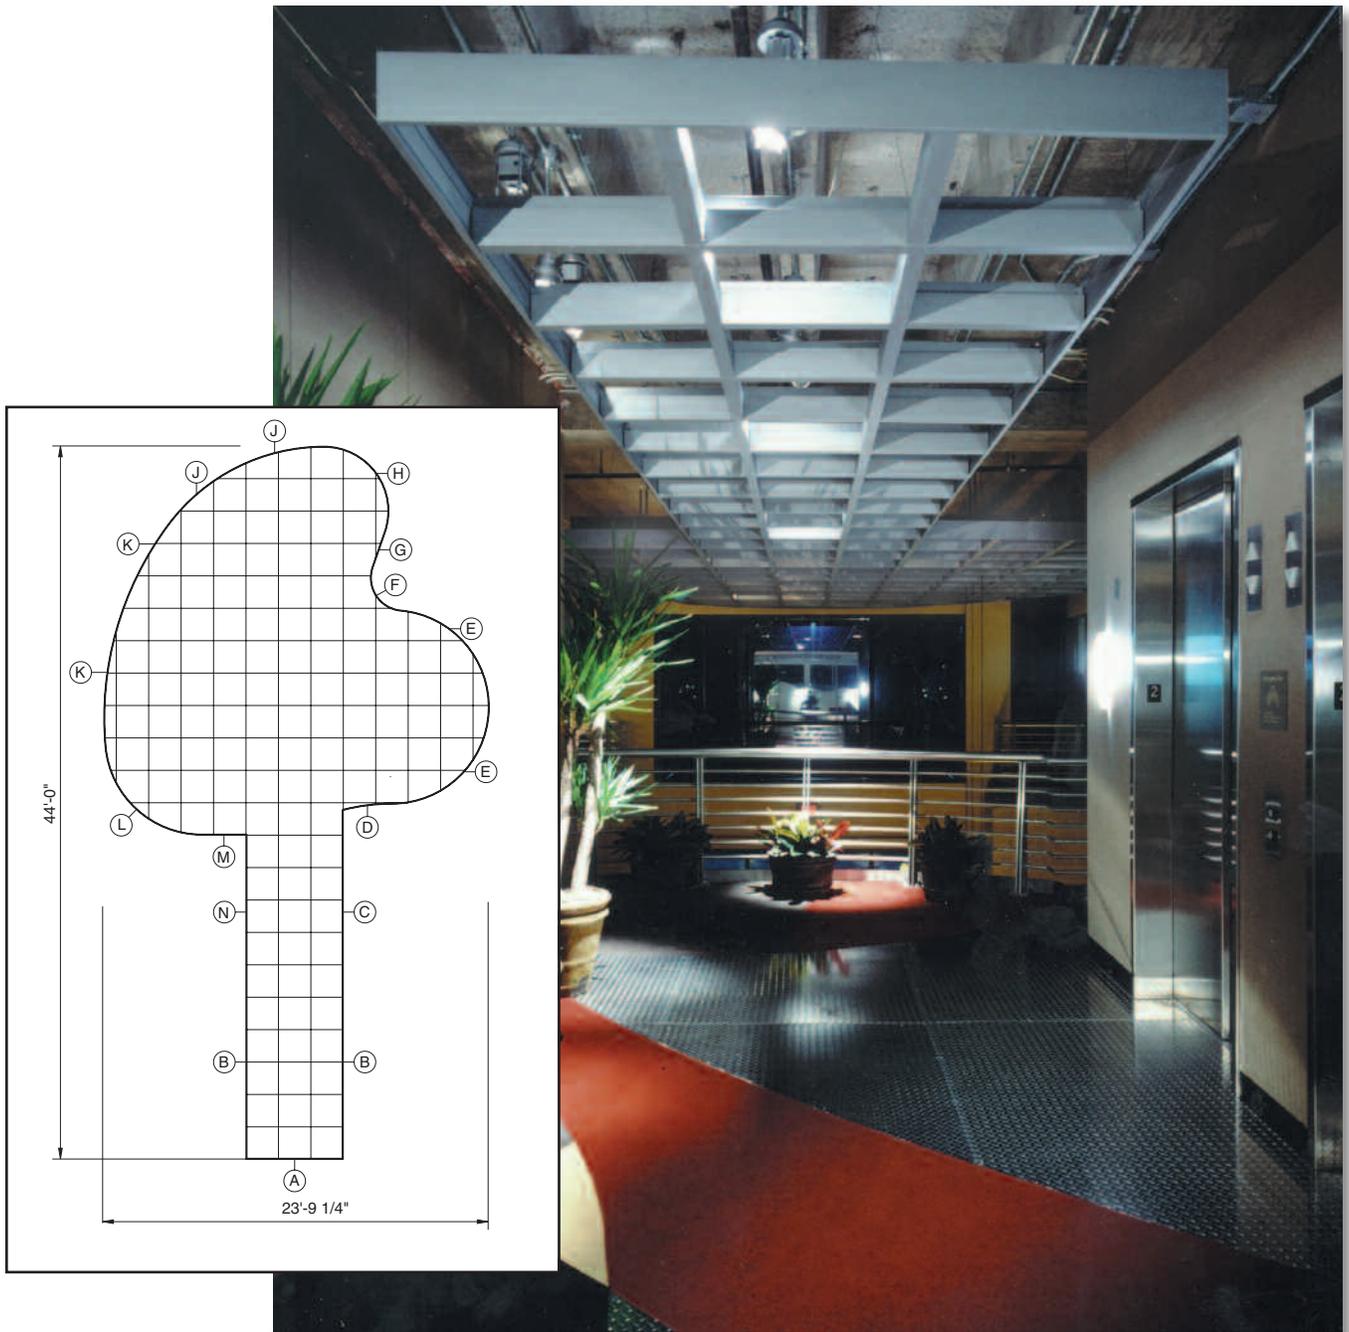

CONTURA Drywall Profiles

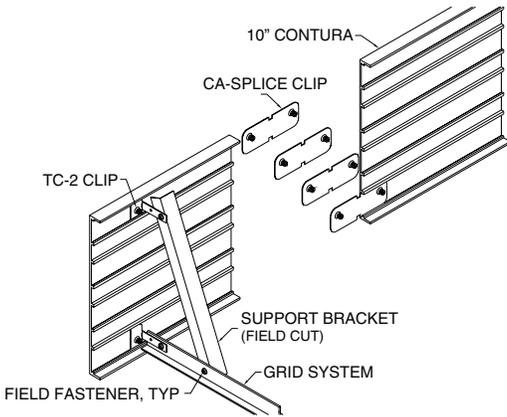

DESIGNING

A reflected ceiling plan marked with specified radii and dimensions is required to begin shop drawings. Before the CONTURA is produced, shop drawings are provided for final approval along with any custom color matches.

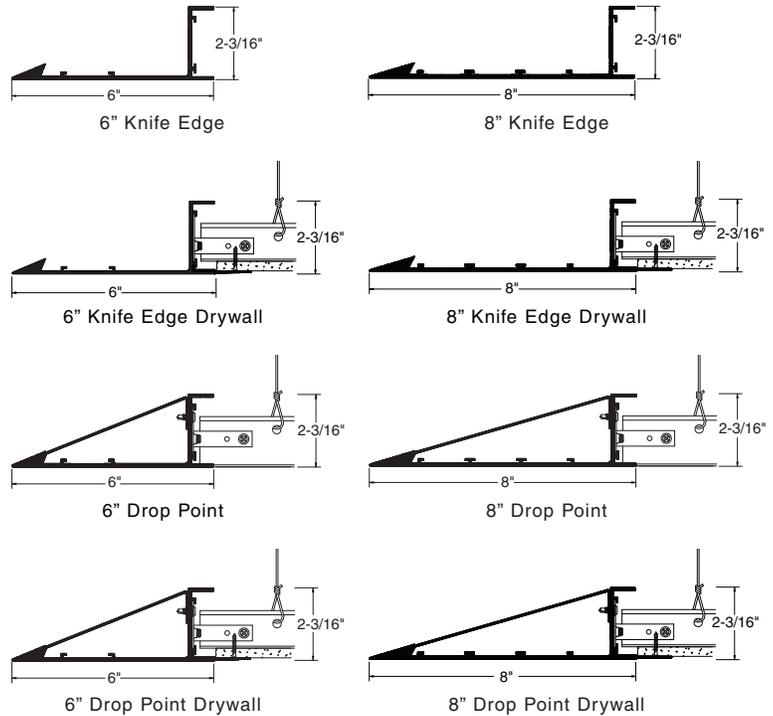

INSTALLATION

Positive locking splices with set screw attachment insure a tight joint between CONTURA sections. A special Twist-In clip simply rotates into the clip boss wherever grid attachment is required. It can be field attached to any manufacturer's grid system.

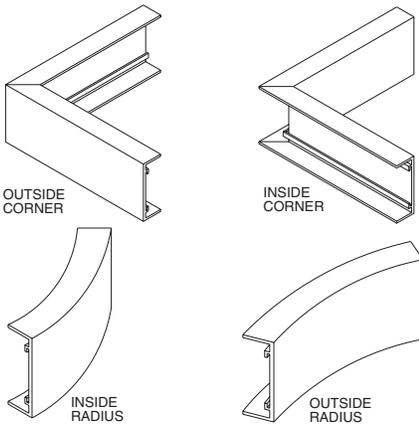

OPTIONS

Optional profiles are shown below. Contact Gordon for pricing, lead times and fabrication capabilities.

FABRICATION

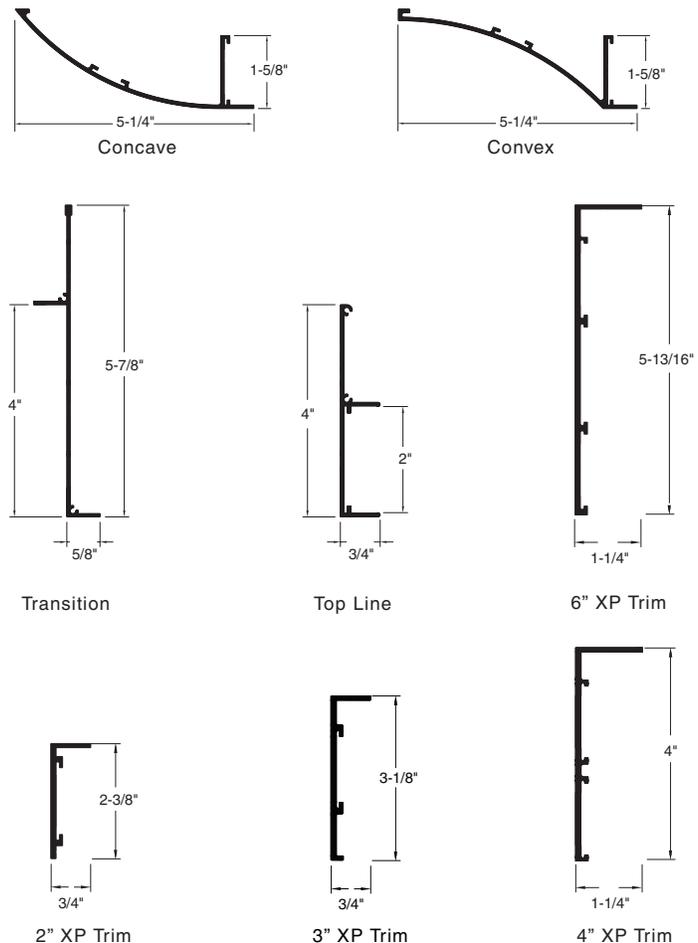

CORNERS

CONTURA corners are available factory mitered in a welded assembly or in straight mitered sections with clips for field assembly.

CURVING

All CONTURA may be curved in both directions (inside or outside). 1-1/2" through 8" CONTURA can be curved to a minimum radius of 24". 10" through 16" CONTURA can be curved to a minimum radius of 48". Please contact us for arching, twisting and tighter radii.

Gordon, Inc. is represented by independent sales representatives throughout the world. We stand ready to assist you in design, pricing and coordination. Contact our headquarters for the name of your representative.

Detailed CONTURA specifications on all products described in this brochure are available in AIA Masterspec® format. Contact our headquarters or website, gordonceilings.com.
