

*The smart and supportive intersection
between information and individuals*

TECHNOLOGY

DESIGN INSPIRATION

Clever and compact, InfoLink™ 5 is an ergonomic computing touchdown station that cares for healthcare workers while they're caring for their patients. It instantly adjusts to alleviate the stress of improper posture as it meets the height range of the many users – doctors, nurses, dieticians, social workers – who input and reference critical information. The smart design and proportions allow InfoLink 5 to be wall mounted to meet the limited square footage of patient threshold areas in most healthcare facilities. It's also ideal for other compact spaces including academic and financial environments, libraries and more.

FEATURES AND BENEFITS

STRONG Powder-coated worksurface is 1" thick and supports up to 25 pounds. FYI...Flat Panel Monitor Arm supports monitors up to 20 pounds.

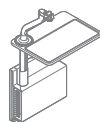

SMART Specially designed to control cables, minimizing technology tangles.

ACCOMMODATING Wall mount plate installs quickly and securely to studs without need for backing.

SECURE Powder-coated steel CPU enclosure keeps hardware and information safe from damage by mobile equipment. Perforated access door disperses CPU heat.

USER-CENTRIC Easy one-handed adjustment covers an 18" range and instantly responds to the height demands of any user.

STATEMENT OF LINE

Refer to Nurture specification guide for complete product details.
