

# SIDEWALK

Sidewalk Mobile with wood veneer tablets.  
Shown with Sidewalk Ottoman and  
Diekman Tables (Best of NeoCon Gold).

### EFFECTIVE EFFICIENT SPACE

A key issue affecting business – save time, save money. A suite of Sidewalk is quickly and easily rearranged for various activity settings in a way that allows for the unpredictability of worker interaction and changing organizational needs. Time is also saved because Sidewalk allows for the integration of mobile technology in a user defined way. The design enhances how the technology will be used, it does

not tie users down to specific utility locations. Money is saved because the collection allows better use of square footage due to the slip-fit and nesting characteristics versus hard-docking. Multi-purpose use decreases cost duplications and increases utilization per square foot. The collection is not designed for a discreet activity, but rather a multitude of activities, individual and group.

### CUSTOM SPACE

Tomorrow's office is about challenging the notion that you need to do everything at a desk. Empower employees to define how they work by giving them options to create comfortable environments through lightly scaled portable furniture. Their work should define their space, not the other way around.

Sidewalk Lounge and Sidewalk Table with "Go Glides."

Go Glide

No Go Glide

### SHARE SPACE

Organizations continue to flatten and become much more flexible – new space planning models including team spaces, and hoteling will become more important.

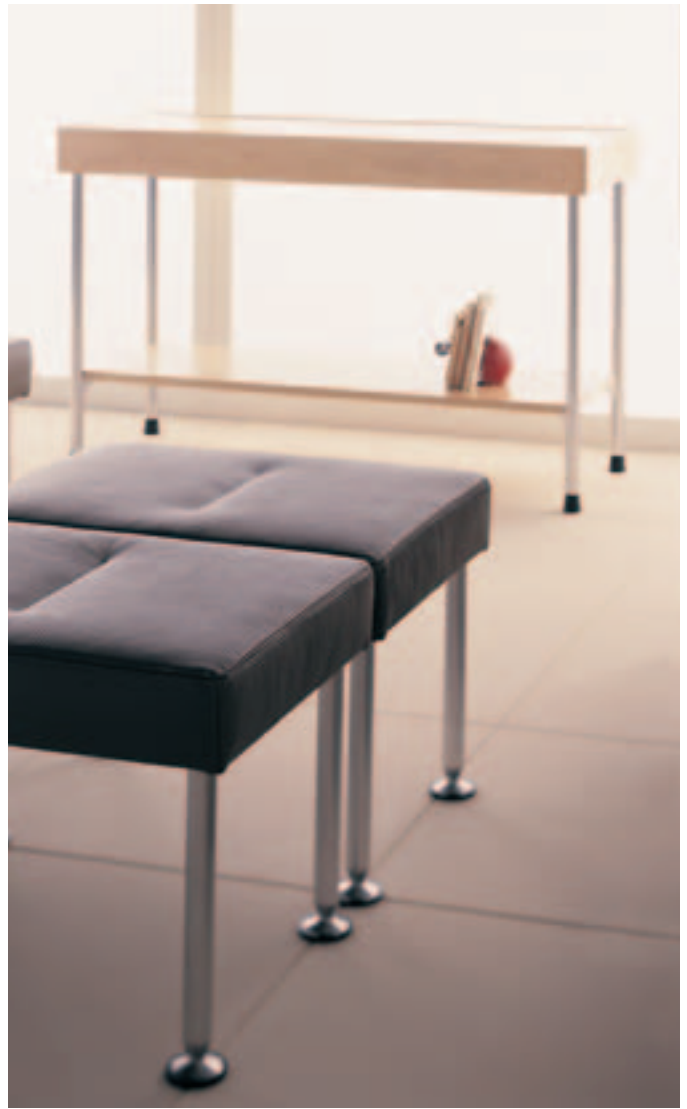

Rather than make all spaces smaller, we can choose to make them more versatile so they respond to a variety of needs. "Slip fit" tables slide under tables, ottomans slide under tables, and benches slide under

credenzas. "Go Glides" and casters allow the users to easily access what they need and manipulate the space in a user-defined way.

### HOTELING SPACE

As technology allows for more and more freedom, people will seek out more comfortable places in which to work. Non-traditional work spaces will become the norm, giving freedom that makes it difficult to relegate

space to single use settings. Sidewalk allows the opportunity to create comfortable work spaces by empowering people to choose and define the necessary elements. An ottoman may be used as an ottoman, but may also be used as a table, a chair, or desk.

## QUALITY OF WORKLIFE

With an increased demand for talented employees, it is no wonder companies are rethinking what attracts and retains top people and what type of corporate culture they want to cultivate. The way a business feels can facilitate employee satisfaction. People are looking for comfort that goes beyond ergonomics. By helping employees feel comfortable in the office in which they are spending more and

more time, they in turn, will be more helpful to the business.

Just as the office has affected the home, the home is impacting the office. Businesses that provide people-centered, rather than technology centered environments, will be more productive. Office design that provides a reprieve from the acceleration of modern day stress is

important. Natural materials and attention to details makes the setting less formal and more relaxing. Simple enough to fit into many environments creating a casual, welcoming appearance, yet strong enough to stand on its own. The occupant is invited to sit in a variety of postures from formal to casual, even sideways.

## **TEAMWORK**

As companies have become more reliant on team-based structures and more participative management styles, open communication is becoming more important. Relaxed and comfortable and relaxed environments have proven that they can foster communication and interaction. The office has shifted from a place to work as an individual to a place to work as a team. Sidewalk allows the users the satisfaction of controlling their environment so that it responds to the group's unique and unpredictable needs. "Go glides" and casters facilitate movement, "slip fit" allows for fluid spaces, and abutting multiple pieces allow for enclosure or division of space.

## **COOPERATION**

Working more efficiently means working smarter - involving good, open communication. Sidewalk creates a group sanctuary, bringing individuals together in a soft space.

## **COMMUNICATION**

Pervasive technology has changed the way we work. Rather than allowing it to determine the way we work, we are choosing how we fit it in. Sidewalk's design facilitates social interaction. Successful companies are ones in which employees work together. The needs of the group are driven by the space and its limitations, the feel of the furniture, and the unpredictable nature of the group and its interaction.

## **VALUE**

Working in an environment that supports productivity and efficiency results in satisfied employees and potentially higher retention rates. The greater impact has to do with increasing the effectiveness of how people work in isolation and in groups to add long term value to their enterprise.

Sidewalk can add long-term value creation to an enterprise by creating an environment in which creative interaction occurs, and well designed teams can operate at an optimum. It helps people do the right thing with environments that enhance employee performance in alignment with corporate goals. Sidewalk fits.
