ID Chair Concept

Developed by Vitra in Switzerland
Design: **Antonio Citterio**

Antonio Citterio and Vitra have applied more than 25 years’ experience in the development of office seating while creating the new office swivel chair range called ID Chair Concept. The ID Chair brings a subtle, elegant design and light colour tones to office spaces – and provides countless possibilities for people to adapt it to their own individual needs in terms of function, comfort and look. However, all design versions are based on the same technical and aesthetic vision. In addition to having a positive impact on the overall aesthetic of an office environment, this is also an invaluable help when it comes to maintenance and service. The ID Chair Concept empowers companies and their employees to define their seating to suit their own personal identity.

Individuality and identity

The office swivel chair range ID Chair Concept consists of many components that are designed to meet all manner of demands regarding aesthetics, materials, purpose and price. The following models form the basis for the custom ID Chair:
ID Mesh with padded mesh backrest
ID Soft with classic padded backrest
ID Trim with slim backrest
ID Trim L with high backrest

Health and biomechanics

The patented technology behind the ID Chair caters to healthy, comfortable seating. The synchronous mechanism "FlowMotion" supports users according to their personal weight – but not just when they are leaning back in their chair: the so-called negative tilt feature straightens the spine when sitting forward on the edge of the seat, thereby taking the strain off of it. The ID Chair enables a dynamic range of motion and provides support with individual resistance when tilting both backwards and forwards.

Sustainability and costs

ID Chair Concept is both exceptionally easy to maintain and sustainable. An above-average lifespan is achieved through its technical, material and aesthetic quality. With the Green User Agreement, Vitra also makes it possible for project customers to use the chairs for up to 15 years - with their subsequent return free of cost. Two service calls will be made after 5 and after 10 years under predetermined conditions.

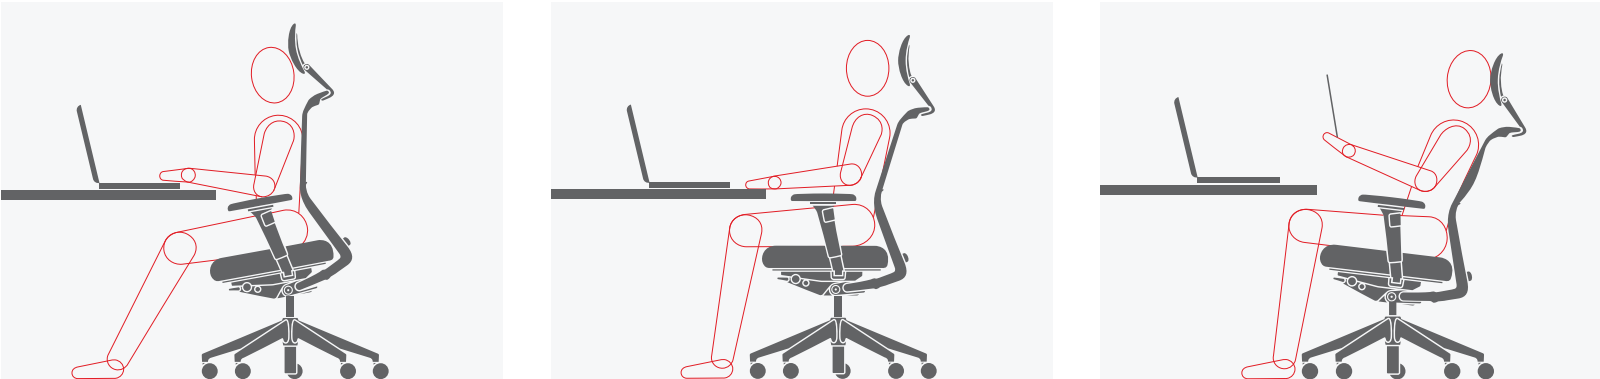

Antonio Citterio
*1950, Italy

Antonio Citterio is an architect and designer who lives and works in Milan. He has been working with Vitra since 1985, during which time he has helped to design a number of popular office chairs and office systems. The Citterio collection is expanding continuously, including the addition of products for the Vitra Home Collection.

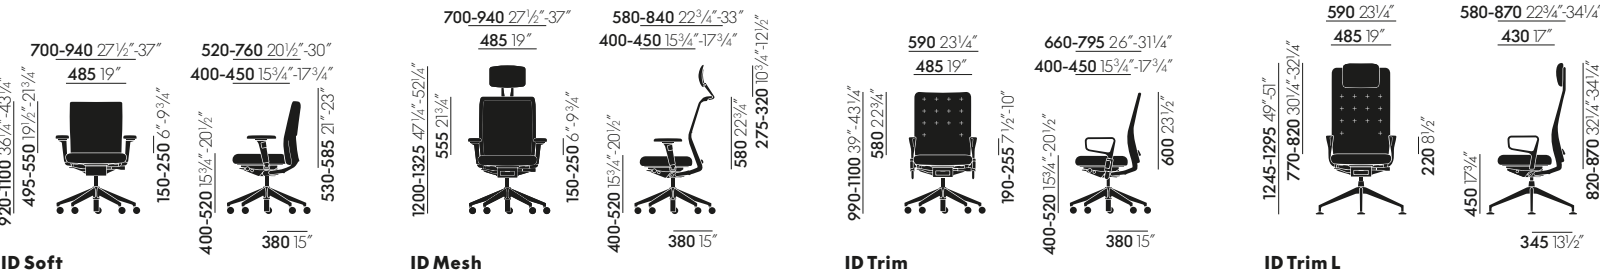

Starting with the main models, the right ID Chair can be configured to meet the customer’s needs and wishes

The Institute of Biomechanics at the ETH in Zurich – one of the world’s leading universities – has used MRI and EMG measurements to prove that using the synchronised forward tilt of the patented “FlowMotion” mechanism leads to increased muscle activity and sets all segments of the lower spine in motion, which has a particularly positive effect on promoting healthy seating

Configuration examples

All measurements are in mm and inches, established pursuant to EN 1335-1
