

Wood Solutions overview

# Steelcase

## Beauty with purpose

Wood is strong and beautiful, warm and familiar, always distinctly individual. For nearly a century, we've built wood furniture that celebrates those qualities and respects their natural origins. We're committed to understanding your needs and developing solutions that better support the way you work. Satisfying a broad range of styles – from **traditional to progressive** – in the **open plan, private offices, meeting rooms** and any other spaces designed to inspire.

Take a look at the following pages and discover the blend of high performance and beauty that's right for you.

- Available with open or closed back design
- Certain models available as a SCS Indoor Advantage certified product

Groove™ | lounge seating

- Complements contemporary and transitional styling, designed by Kirt Martin
- Lounge seating applications
- Modular lounge seating which offers functional and aesthetic variety

**Love** – We combine the desire to do what’s right with tools that help us identify ways we can continuously improve our environmental performance. Our wood harvesting practices include working with managed forests, non-endangered woods and use of natural veneers versus composites.

**Materials Chemistry** – Analysis by MBDC allows us to understand the chemical makeup of our products and production processes, and their safety to human and environmental health. It flags materials to avoid in new products and eliminate from existing products. Our wood manufacturing uses primarily water-borne glues, stains and topcoats, resulting in greatly reduced levels of VOC emissions and hazardous waste.

**Lifecycle Assessment (LCA)** – An LCA measures the environmental impact of a product’s materials, production, transport, use, and end of life. LCAs help us identify ways to improve our environmental performance at every phase of a product’s life.

**Recycling & Reuse** – Products are designed to facilitate disassembly and maximum recyclability. This includes the use of 100% recycled wood fiber content in particleboard and secondary uses for scrap in landscaping or as a fuel source. When a wood product reaches the final phase in its lifecycle, the Steelcase Environmental Partnership Program can connect you with resources to recycle or reuse that product.

Following this formula helps make all of our wood products environmentally responsible at every stage of manufacturing and use. Many Steelcase Wood products are Cradle to Cradle™ certified; see [steelcase.com/environment](http://steelcase.com/environment) for a complete list. This formula, combined with our LEED® certified plant—the first in the World—helps show our love for both wood furniture and the environment.

Love how you work.®
