MILLENNIO

MILLENNIO
Pole Mounted Luminaire

MILLENNIO’s futuristic appearance coupled with revolutionary LED illumination embodies the future of pedestrian scale lighting. The sleek linear design of the extruded aluminum housing casts a strikingly simple silhouette.

A precision engineered, teardrop shaped acrylic lens projects wide angle illumination in a long narrow beam ideally suited for public pathways or parks. Adjustable fitting allows the fixture to be up-tilted to increase light projection.

Luminaire is available in single or twin mount configurations. Vertical T-slots extruded into the rectangular aluminum pole provide linear shadow lines, while serving as integrated luminaire mounting. MILLENNIO’s natural anodized

finish personifies its advanced design and technology. All hardware is stainless steel. Requires soil insert.
