

The Leading Edge® since 1945

Shadowline Coping

Shadowline Coping features an indented profile providing visual depth at the parapet edge. Shadowline Coping combines anchor-clip and gutter support units at the joints. The product consists of a metal coping cap with holds down clips and drain support chairs for capping most any parapet wall. The system is designed to be leak proof and maintenance free with concealed splice plates and no exposed fasteners.

Product Feature	Product Benefit
Free floating coping cap design	Design allows for full thermal cycle movement at each expansion joint without compromising perimeter roof integrity.
Performed channel in splice plate	A preformed channel on top of the concealed splice conducts water from coping section joints to the roof. Eliminates caulking and future maintenance at the coping joint, and prevents water infiltration.
Concealed joint splice, anchor clips and fasteners	Creates a smooth unbroken and color-matched sight line for a professional appearance on the building exterior.
20-Gauge galvanized steel anchor clip	20-Gauge galvanized steel for strong uplift performance.
Full internal concealed splice.	The full internal splice plate is made from the same metal and finish as the coping cap creating a smooth unbroken and color-matched professional appearance from the face, top and back of the coping.
Pre-punched holes	Pre-punched holes allow proper attachment of clip and quick installation.
Factory Fabricated accessories	Corners, end caps, and other accessories are factory fabricated.
UL Classified, ANSI/SPRIES-1 tested and fully warranted against leaks and blow off.	Tested, certified, and approved to withstand peeling effects of strong winds. Manufacturer's blow-off and watertight 20-year Excel, 110 mph warranty.
