

LOWBOARD

(Designer E.Arosio)

Modular structure with drawers in natural anodized or matt white lacquered aluminium finish: Available in two options:

- with servo drive equipped drawers
- with manually opened drawers

The structure is made with boards of natural anodized aluminium or with MD-wood fibreboards (2 cm thick) covered both sides with a matt white lacquered aluminium sheet. This system is composed of units containing 2, 3 or 4 compartments for drawers provided with a whole front with a groove for opening at the bottom.

At the back of the bottoms of each storage unit there is a 4.5 cm large space to let wires in at full length plus a counterweight which avoids overturning with an open drawer.

Storage units are stackable by using in between a 2.5 cm high spacer recessed by 2.5 cm compared to the unit and by 7 cm at the back.

The 7.5 or 2.5 cm high ground-resting plinth, recessed by 7 cm compared to the unit, is provided with adjustment feet.

With back-to-back units, a shim element of the required size is supplied. This must be requested in the purchase the order.

Besides being stackable, the units can be modular in depth also. In this case shim elements are provided in order to fill the gap between the plinths.

Selection and sizes

The structure is 70 cm deep. The units are 20.5 cm high and available in 4 lengths: 100, 150, 200 and 250 cm.

The 100 cm large unit contains two drawers (for 60.4 and 34.6 cm large compartments). The 150 cm large unit contains two drawers (for 72.5 cm large compartments).

The 200 cm large unit contains three drawers (for 64.4 cm large compartments).

The 250 cm large unit contains four drawers (for 60.4 cm large compartments).

Internal drawers, required to complete the composition are in aluminium or white according to the specified finish, and must be selected among the following options:

- non-equipped
- equipped : with CDs rack, with DVDs rack, with video recorder/DVDs rack (only for manually opened drawers), with decoder/DVDs plus remote controls rack.

Drawers are always equipped with fully-extractable Blum guides.

In the white lacquered version, drawers come with sides in white lacquered steel, bottom and back in chipboard melamine-coated wood in white.

WITH SERVO DRIVE EQUIPPED DRAWERS

The storage unit is equipped with a high quality and technologically- innovative electric mechanism designed to open even large and heavy drawers by a light pressure on them.

The system consists of an electric motor (24 V, 2 A - CE compliance), a universal 100W transformer (CE compliance). Voltage: 220 V (Europe) and 110 V (USA). While ordering, please specify always which voltage is required.

The drawer gets open by pushing its front gently and can be stopped in any position. It is highly safe for the end user and, in the event of a blackout, the drawer can be opened or closed easily.

Of great functionality, extremely noiseless, the system is installed on the back.

The unit comes with a drill on the bottom for cable access.

WITH MANUALLY OPENED DRAWERS

Drawers are always equipped with the closing-shock absorber "Motion".

1 Storage unit

2 Spacer.

Height 2.5 cm. Recessed by 2.5 cm compared to the unit at the three sides and by 7 cm at the back side.

3 Shim element for modular plinths

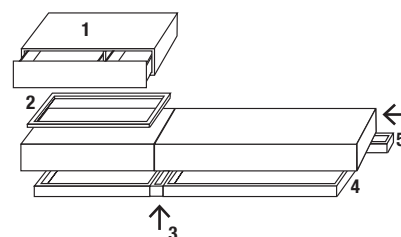

Height 7.5 cm, length 14 cm, Depth 56 cm.

4 Plinth

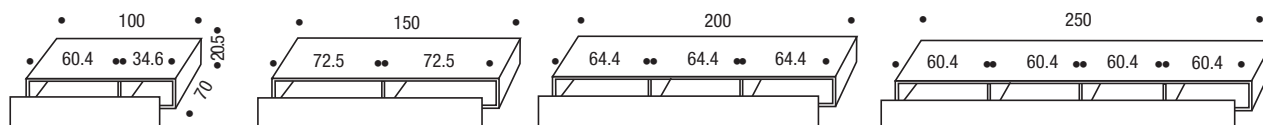

7.5 or 2.5 cm high, recessed by 7 cm at the four sides, with adjustment feet.

5 Depth shim element

7.5 or 2.5 cm high
