

TABLE LABELS

Each Byrne Electrical Unit comes with a self-apply label showing the number of the unit – numbers 1 through 8.

Attach the label to the underside of the Rhombii Table for easy identification.

Having the Identification Number Label in place helps you find the appropriate table when reconfiguring the room for a different application.

Rhombii // Byrne Interlink® Power System

- Interlink and the Electrical Unit stay with the table folded up in the Modesty Panel, out of the way and protected
- The cables and power system become an integral part of the table, even when the tables are folded for transport & storage
- Since the Interlink System must be connected in sequence, you will need to keep the tables together by number, a kind of “Table Stable”
- Remember, each row of tables will require its own circuit!

TABLE STABLE

Showing 5 groups of 60” tables, with each groups’ Interlink color codes
