The Company Design Philosophy

By participating in more advanced design scenarios and innovative concept models, Segis produces objects that are both functional and aesthetically versatile. This is one of the main aspects of the group's activities. Partecipando agli scenari più avanzati del design ed innovandone i paradigmi, Segis crea oggetti che hanno una versatilità sia funzionale che estetica. Questo è uno degli aspetti principali del campo di azione del gruppo.

To live life means to move from one residential or public space to the other, interacting with the objects that inhabit those places and spaces. At any moment, you can choose to either make use of or to simply admire a chair, a sofa, a table or an occasional furnishing simply by interacting with it.

Segis presents its dynamic, tangible and functional designs that are the result of different technical, productive and creative skills that have been blended into a rich and original energy. All of this made possible as a result of its excellent collaboration with prominent designers.

Each product must have a reason to exist. This in the truth that emerges from the selection of exemplary products which represent best the success that Segis has realized.

The balance between ability and sensibility has created useful and ergonomic everyday objects that have changed the world around us and our way of living life.

Vivere significa passare da uno spazio all'altro, domestico o pubblico, interagendo con gli oggetti che abitano gli ambienti ed i luoghi.

Ogni passaggio è dunque un momento per usare o semplicemente ammirare una seduta, un divano, un tavolo, un complemento interagendo con loro.

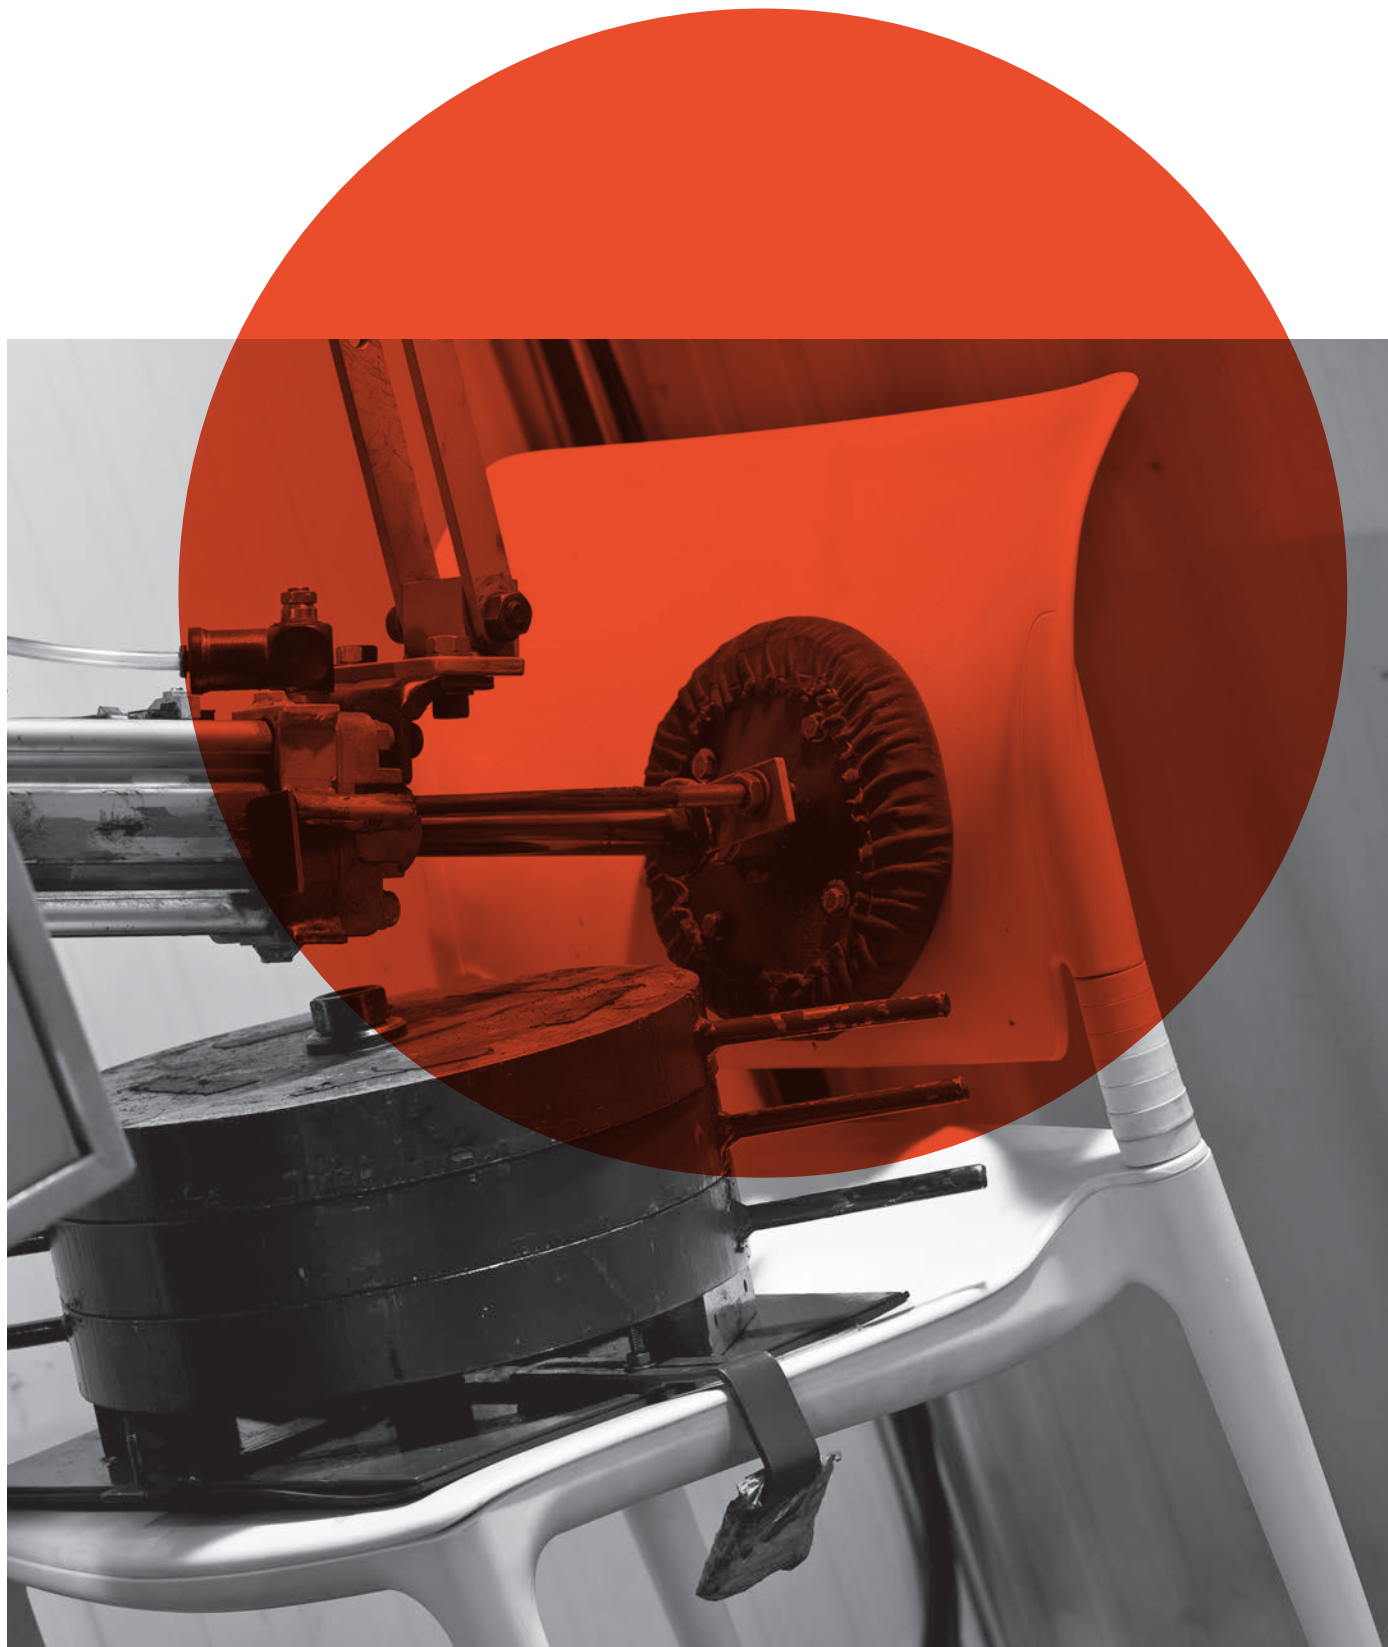

Segis presenta il suo design "vivo", concreto e funzionale dove le diverse competenze tecniche, produttive e creative si fondono in una energia ricca ed originale, scaturita dalla collaborazione con i designers.

Ogni prodotto deve avere una ragione per esistere, questo è il senso più vero che traspare dai prodotti icona che rappresentano il successo di Segis.

Dall'equilibrio tra abilità e sensibilità sono nati oggetti quotidiani, necessari, ergonomici che cambiano il mondo circostante ed il modo di viverlo.

Why Segis?

Segis is a worldwide leader in the design and production of innovative, quality seating products for the contract furniture industry. The company was established in 1983 close to Florence, Italy a region rich in history and the production of furniture and furnishings. The company presently has state of the art manufacturing facilities of about 15,000 m2 (170,000 sq. ft.) in Italy and 7,000 m2 (78,000 sq.ft) in Vietnam; with an additional assembly, upholstery & distribution facility in the United States. These locations have increased Segis's worldwide competitive reach in the market place and permitted it to have better control over lead times with respect to world geographies without any sacrifice to its level of quality. Both manufacturing facilities are equipped with the latest robotic bending and welding technologies capable of addressing any particular client request from individual orders for offices and restaurants to entire fit outs for large scale projects such as hotels, public spaces and cruise ship lines where the type and quality of seating is a direct representation of the image that the particular clients wish to project. Over the years, Segis, through its products, has contributed to the overall image, branding efforts and initiatives of companies such as Grand Hyatt Hotels, Venice Laguna Palace Hotel, Marriott Hotels, Crown Casino, Group Accor Hotels, Union Bank Of Switzerland, Carnival Lines, Art & Science Museums, Royal Yacht Club, Apple Computer, Microsoft, Mercedes Benz, Daimler Chrysler, Nestlè, AT&T, Swatch, Wimbledon, Mandarin Duck, Deutsche Bank, Chase Manhattan Bank, British Airways, Costa Cruise Lines, Disney Resorts, Eriksson, Leo Burnett, Lufthansa, La Scala Theatre in Milano, Nortel Networks, in addition to numerous cafes, restaurants, food courts, shopping centers, hospitals and museums, college & university lecture halls, sporting venues and airports in many cities across the world. In addition to its award winning designs, Segis is also focused on the internal application of the highest levels of international quality standards and

a research and development program that continually strives to find the best materials, finishes and manufacturing processes that not only address basic ergonomic issues of design but also reinforce the company's commitment to sustainable, environmental controls and issues. Producing high quality products is not enough for Segis. It is equally committed to rigorous testing programs in order to provide unparalleled warranties for its products. The attention to detail extends through customer post order and service initiatives. Segis looks forward to every order as it becomes an opportunity to welcome any new clients to its growing family. It is this basic and personal human approach that will continue to allow Segis to grow as its clients are growing.

Le ragioni di una scelta

La Segis nel mondo è azienda leader nella progettazione e produzione di sedute innovative e di alta qualità per l'industria Contract. L'azienda è nata in Italia nel 1983: a Poggibonsi, paese di antica storia e con una tradizione di produzione di mobili ed arredamento, vicino a Siena. Segis dispone oggi di strutture produttive tecnologicamente avanzate, su una superficie di circa quindicimila metri quadrati in Italia e settemila in Vietnam, con una base di assemblaggio, imbottitura, tappezzeria e sua distribuzione negli Stati Uniti. Da queste locazioni Segis ha potuto espandere la sua penetrazione commerciale nei vari scenari geografici del mondo, migliorando ovunque il suo controllo sui tempi di consegna e di servizio, senza per questo sacrificare il suo livello qualitativo. Entrambe le strutture di produzione sono equipaggiate con le ultime tecnologie robotiche di piegatura e saldatura, e capaci di far fronte ad ogni particolare richiesta della clientela, da singoli ordini per uffici e ristoranti a progetti su larga scala, quali hotel, spazi pubblici e navi da crociera, dove il tipo e la qualità delle

sedute rappresenta con immediatezza l'immagine in cui ogni singolo cliente si riconosce e che desidera proiettare al mondo esterno. Nel tempo Segis, attraverso la sua produzione, ha contribuito alla immagine globale e di marchio di conglomerati quali Grand Hyatt Hotels, Venice Laguna Palace Hotel, Marriott Hotels, Crown Casino, Disney Resorts, Group Accor Hotels, Union Bank Of Switzerland, Carnival Lines, Art & Science Museums, Royal Yacht Club, Apple Computer, Microsoft, Mercedes Benz, Daimler Chrysler, Nestlè, AT&T, Swatch, Wimbledon, Mandarin Duck, Deutsche Bank, Chase Manhattan Bank, British Airways, Costa Cruise Lines, Eriksson, Leo Burnett, Lufthansa, il teatro dell'opera La Scala di Milano, Nortel Networks, oltre a numerosi ristoranti, caffè, ospedali, musei, aule universitarie ed aeroporti in ogni parte del mondo. Oltre al suo design, vincitore di numerosi premi, Segis dedica al suo interno la massima attenzione all'applicazione più rigorosa degli standard qualitativi internazionali, ed implementa un programma di ricerca e sviluppo orientato alla continua ricerca dei migliori materiali, finiture, ed al perfezionamento di un processo produttivo non solo mirato alla ergonomicità del disegno, ma anche a rinforzare l'impegno aziendale in controlli di sostenibilità ambientale. Produrre prodotti di alta qualità non è però sufficiente per Segis, che continua ad impegnarsi in rigorosi programmi di verifica e controllo, che le permettono così di estendere alla sua clientela le garanzie richieste. La sua dedizione alla cura dei dettagli include anche una particolare attenzione alla qualità di un servizio dopo vendita che riflette quella dei suoi processi produttivi e delle logistiche, perché considerata parte integrante del prodotto. La filosofia di Segis è di affrontare ogni ordine come una opportunità per accogliere nuovi clienti nel suo tessuto aziendale in continua crescita. E' esattamente questo approccio personale, diretto ed umano che continuerà a permettere a Segis di crescere assieme ed in parallelo alla sua clientela.

Management Policy

From its very beginnings, Segis has not only worked to produce and market its products within the design industry, but it has done so adhering itself to three fundamental principles: those of Quality, Environment and Ethics. The Segis Group has undertaken the path to quality which has allowed the company to be considered one of the leaders in the demanding industry sector of contract furnishings. Being that it is primarily a manufacturer, the company has had to integrate this concept at every level: quality of design, quality of process, quality of product. In order to achieve the highest quality levels, the company has aligned itself with many noted architectural and design studios, and has implemented and engineered, where appropriate, styling and other more advanced concepts in order to develop its products from their birth as a prototype to their final form. By internally performing the necessary testing according to accepted international practices, the quality process is guaranteed by the ISO 9901 Certification for Quality Systems that SEGIS received in 1993. It was one of the first companies in this sector to receive such a certification, integrating its concepts and systems at every procedural level (Design, Production, Logistics, Sales and Post Sale Customer Service Phases). Finally, the quality of each product is guaranteed by the application of the most rigorous technical testing done according to the ANSI, BIFMA and EN standards, all performed by laboratories approved and authorized by these entities.

Sustainability and Environment

Just like with the issue of quality, environmental sustainability has always been at the forefront for Segis. From the beginnings of its operation, Segis has paid the most attention to the selection of production processes with

the lowest environmental impact and with the strictest controls with regards to all aspects of emission, discharges and waste. Consistent with these basic principles, Segis was awarded the ISO 1400 certification back in 1997 for an internal environmental management system whose goal was to not only guarantee the compliance of every appropriate regulation regarding production, but also, and more importantly, that of continually bettering the limits for all departments and companies within the group. Segis is committed to research for its products that always uphold the greatest respect for the environment through the following principles:

- The study and design of products that provide energy-efficient production processes
- The use of recycled materials in whole or in part (where possible) or recyclable
- The optimization of processes and programs to reduce waste to a minimum
- The usage of non-polluting surface finishes
- The usage of wood products that are grown in certified forests
- The non usage of any glue products containing formaldehyde.

- Control over the total supply chain in order to guarantee the respect by suppliers for these same principles. Tests have also been performed to detect the presence of volatile organic compounds (VOC) on the products and research has also been done on the supply chain vendors to ensure compliance to these limits. Segis Products have been awarded numerous certifications and awards from many entities internal to the European Union, including some from Legambiente and manufacturing syndicates as well as the certificate "Good Environmental Choice Australia" (GECA).

Social Responsibility

Among the aspects that the group considers most important is the respect for the rights of employees at all levels, as well as for workers in general. To underscore this achievement, Segis was awarded the specific certification, SA8000, for social responsibility, which guarantees the organization's commitment in several areas.

- The Guarantee of a healthy workplace for all employees
- The maintenance of efficient and reliable systems with respect to security
- The non use of child labor and under age labor
- The non use or support for any form of "forced labor", ie the forcing of employees to work because of any kind of blackmail
- The assurance of the health and safety of its employees and full compliance with the rules and relative regulations;
- The guarantee to allow its members the freedom to form trade unions
- The non tolerance for discrimination of any kind towards workers or between workers
- The application of disciplinary procedures in full compliance with the law
- The establishment of working hours to meet the requirements of the law and within local and national agreements.
- The payment of salaries correspondent to national contracts and any eventual additional company contracts

- The disclosure of its commitment to external entities to respect the standards of SA 8000

- The use of suppliers who also comply with the principles of the standard SA 8000.

Politica di gestione

Da sempre Segis opera per produrre e commercializzare prodotti di design e lo fa basandosi su tre principi fondamentali: Qualità, Ambiente, Etica. Qualità e certificazioni Quality and Certifications Il gruppo Segis ha conseguito un percorso di qualità che le consente di essere leader in un mercato così esigente come quello del contract. Essendo un'azienda produttiva ha dovuto integrare questo concetto a tutti i livelli: qualità di progetto, qualità di processo e qualità di prodotto. Della prima si fa carico in collaborazione con noti studi di architettura, implementando ed ingegnerizzando dove necessario concetti stilistici e progetti più avanzati, per poi sviluppare dal prototipo alla preserie ed eseguendo internamente i test prestazionali secondo i principali standard internazionali. La qualità di processo è garantita dalla certificazione ISO 9001 del sistema qualità, che ha ottenuto nel 1993, tra le primissime aziende del settore, integrando questo sistema ad ogni livello dei suoi processi (progettazione, produzione, logistica, servizi alla vendita e post vendita). Infine la qualità di prodotto è garantita dall'applicazione delle più severe prove tecnico-prestazionali secondo gli standard ANSI Bifma e EN, tutte eseguiti da laboratori riconosciuti ed autorizzati da questi enti.

Sostenibilità ed ambiente

Come la qualità, anche la sostenibilità ambientale è sempre stata per Segis un principio fondante. Sin dalla nascita è stata fatta la massima attenzione alla scelta di processi produttivi a basso impatto ambientale e controlli severi su tutti gli aspetti di emissioni, scarichi e rifiuti. In coerenza a questi

principi, già nel 1996 Segis ha conseguito la certificazione ISO 14001 per un sistema di gestione ambientale interno, con l'obiettivo di garantire il rispetto di ogni aspetto normativo riguardante la produzione e, soprattutto, di migliorare continuamente i limiti per tutti i reparti e le aziende del gruppo. Segis è impegnata nello studio di prodotti che mantengano sempre il massimo rispetto dell'ambiente attraverso i seguenti principi:

- Lo studio e la progettazione di prodotti che prevedano processi produttivi a basso impatto energetico
- L'utilizzo di materiali riciclati totalmente o in parte (quanto possibile) o riciclabili
- L'ottimizzazione dei processi e dei programmi al fine di ridurre gli scarti al minimo
- L'utilizzo di finiture superficiali non inquinanti
- L'utilizzo di legnami provenienti da foreste certificate
- Il non impiego di colle con presenza di formaldeide

- Il controllo della filiera di fornitura al fine di garantire il rispetto degli stessi principi. Sono stati fatti anche test di controllo di presenza di sostanze volatili organiche (VOC) sui prodotti, e ricerche sulla filiera di fornitura per garantire il rispetto dei limiti. I prodotti Segis hanno ottenuto numerose certificazioni e riconoscimenti da vari enti, all'interno di progetti quadro europei, da Legambiente e da consorzi produttivi ed il certificato Good Environmental Choice Australia (GECA)

Responsabilità Sociale

Tra gli aspetti che tutto il gruppo considera più importanti c'è il rispetto dei diritti dei collaboratori a tutti i livelli, oltre che dei lavoratori in genere; per realizzare questa vocazione è stata ottenuta la specifica certificazione SA8000 per la responsabilità sociale, che garantisce l'impegno dell'organizzazione in vari ambiti:

- Garanzia un posto di lavoro salubre a tutti i dipendenti
- Mantenimento degli impianti efficienti e affidabili in ambito di sicurezza
- Non impiego di lavoro infantile e minorile;
- Non ricorso né sostegno ad alcuna forma di "lavoro obbligato", cioè di costrizione dei dipendenti a lavorare con ricatti di qualunque tipo
- Garanzia della salute e della sicurezza dei propri dipendenti e pieno rispetto delle norme di legge relative
- Garanzia della libertà delle associazioni sindacali e dei propri aderenti
- Assenza di discriminazioni di qualunque tipo dei lavoratori e fra i lavoratori
- Applicazione di procedure disciplinari nel pieno rispetto delle norme di legge
- Orario di lavoro rispondente ai requisiti di legge e agli accordi nazionali e locali
- Retribuzione rispondente al contratto nazionale e agli eventuali contratti integrativi aziendali

- Comunicazione all'esterno del proprio impegno al rispetto della norma SA 8000

- Impiego di fornitori che rispettino anch'essi i principi della norma SA 8000.
