

Natural Woodblinds

Natural Woodblinds

AMERICAN TIMBER

We choose to exclusively source premium-grade American timber slats for their superior quality. Not only do American timbers take on finishing colors and techniques more beautifully than foreign sourced wood, but because of their durability we can refinish them to their original luster through our first-of-its-kind RECRAFTING™ process.

CUSTOM FINISHES

Rather than crafting blinds with pre-finished slats, we custom mix and apply all finishes ourselves to your specifications. This allows you the opportunity to match a unique color or finish of furniture, wood work or cabinetry.

HAND FINISHED

Our master artisans finish each individual slat using a meticulous multi-step process including sanding, staining/painting, and applying multiple finishing coats. The result is a furniture quality woodblind that is unmatched in look and feel.

PRECISE SLAT ENDS AND ROUTE HOLES

Slats are trimmed for a tight fit within the window and route holes are small to minimize light leakage and preserve privacy. Each one is individually finished to maximize aesthetics and to ensure the wood slats maintain structural integrity throughout the life of the blind.

DUPLEX

For a truly finished design, we can custom finish the back of the slats separately to match a home's exterior or design elements such as trim or shutters.

HEADRAIL & COMPONENTS

Each blind is handcrafted using heavy gauge steel headrails and premium componentry ensuring it will lift and tilt effortlessly throughout its lifetime.

MAGNETIC VALANCES WITH MITERED RETURNS

Hidden magnets allow the valance to cleanly conceal blind mechanics. Side returns on outside mount blinds are mitered at the corners preserving the design aesthetic of the room.

NATURAL WOVEN TAPE

Designed to coordinate with our Natural Roman Shades and Natural Wallcoverings, our exclusive Natural Woven Tape is woven-to-size from best-in-class sustainable fibers and features unique, loom finished edges.

BRAIDED CORD

Lift cords are hand braided to keep the blinds equalized and the cords organized. It is the signature element of a HARTMANN&FORBES Natural Woodblind and an indication of the individual, hand finished quality of each Natural Woodblind.

AUTOMATION

Custom programmed lift and tilt automation enhances a lifestyle by adding effortless and intelligent functionality to the design.

RECRAFTING™

First-of-its-kind in the industry, our RECRAFTING™ process returns a HARTMANN&FORBES Natural Woodblind to its original luster. Slats are refinished to their original specifications and blinds are rebuilt with new cording and components to extend the life of the blind.
