

# Neos cantilever chair.

180 range

Appealing.  
Attractive.  
Versatile.

The cantilever models complement the Neos swivel chairs perfectly. Their superior design, high quality appearance and variety of upholstery options make them ideal candidates for a multi-purpose seating range in their own right. Perhaps as a place for a visitor to sit; as a comfortable and exclusive conference cantilever chair, or as stackable seating for seminars and presentations.

The cantilever chair consists of a slender, bright chromium-plated tubular steel frame connected to an elegant tapered outer rail. The space between the outer rail and the shell is not just simply a smart detail: the rail is also a handle and at the same time allows flexible adjustment of the back section. The single-section seat shell is invisibly attached to the seamless frame structure and combined with the suspended frame, it offers comfort par excellence.

**Neos cantilever chair**  
Design: wiege

Model 183 / 3  
backrest upholstered,  
frame bright chromium-plated

The seat shell is optionally available with exchangeable seat and back cushions, or with a non-upholstered backrest. Select upholstery from the wide range of fabrics in the Wilkhahn collection.

**183 / 3** As alternatives to the standard armrests with sleeve-like covers made of black-grey, or white elastomer, solid-wood armrests are also available to match the veneers in the table ranges. The result is an appealing set of matching tables and chairs.

**183 / 3** The cantilever's stacking capability is an integral part of the design. The classy three-dimensional curve of the frame permits stacking of up to five chairs. The v-shaped side extensions of the seat shell centre the stack and the completely smooth underside of the seat shell prevents pressure marks in the seat- and backrest-upholstery.

**183 / 5** Distinctive, classy and practical: the outer rail on the backrest acts as a grip and makes the back section of the chair flexible. The cushions on the leather versions are especially high quality, crafted to perfection and include a wool-fleece overlay.

Armrests comprise round sleeves in a black-grey or white tactile, PVC-free elastomer material. Model **183 / 5**, or optionally with solid-wood armrest pads, oak, maple or walnut natural finish.
