

KI Tables

Care and Maintenance

KI Tables require minimum maintenance.

Proper care and careful use is the best method of maintaining the finish and function of the product.

Recommended Cleaning Instructions - Laminate Tops

- To clean the laminate, use a mild solution of water and detergent. (pine cleaner and warm water works very well). Wipe clean with a dry cloth. As a last resort, stubborn dirt or grease may be removed with a lacquer thinner or other solvent. Some stains such as grape juice may be removed by wetting the table surface and sprinkling lightly with baking soda, then wipe clean with a damp cloth. (Do not allow the baking soda to remain more than two minutes.) As always, thoroughly dry the surface with a dry cloth. Never use a harsh abrasive such as Comet cleanser, scrub pads, etc., to clean the surface. To maintain a bright attractive surface, occasionally apply a coating of wax (the same you would use on your home furniture) to the table top.
- Gouges and abrasions in the vinyl “Bull Nose” edging can be removed with “000” steel wool. Apply a light coating of liquid vinyl floor wax to restore the sheen.
- Never use a water hose or spray washer to clean a table. In the event a table becomes wet, as soon as possible thoroughly dry both sides of the top with a dry cloth. Excessive moisture will cause the particleboard core to swell the top and bottom, exposing the core behind the molding. The top will appear to grow in thickness.

Recommended Maintenance Instructions - Table Frames

- It is recommended that frames be kept dry from water, rain, ice, snow and salt.
- To clean frames use warm water and a mild soap then dry thoroughly. Chrome frames can use chrome polish if additional cleaning is needed. Once clean and dry protect the coating with wax or something as equal. Wax polish retards corrosion by sealing the surface with a protective wax coat.
