

Instructions for Replacing

Element Housing CMH Ballast

ELEMENT
 a brand of TECH LIGHTING®
**CAUTION - RISK OF FIRE**

This product requires installation by a qualified electrician. Before installing be sure to read all instructions and **TURN THE POWER TO THE ELECTRICAL BOX OFF.**

1A

- 1 Turn off power to the housing.
- 2 Remove the trim.

1B

- 3 Squeeze the tabs to release the lamp housing and push the housing back.
- 4 Release the rotation lock and rotate the housing so the opening faces the access doors.

1C

- 5 Remove all three thumb nuts on the access doors.
- 6 Remove the access doors.

NOTE: The access doors are too large to fit through the fixture opening. Set them aside within the fixture during this repair.

1D

- 7 Remove the two thumb nuts inside the electrical box. These thumb nuts hold the ballast in place.
- 8 Pull the ballast out of the housing. Do not disconnect any wires at this time. The wires have enough slack to pull the ballast completely out without disconnecting.

- 9 Pull the ballast wires out until the terminals are accessible.
- 10 Disconnect the original ballast at the terminals and connect the new ballast, matching the wires by color.
- 11 Feed the wires back into the electrical box and put the new ballast in place.
- 12 Tighten the two thumb nuts on the ballast.

- 13 Install the left door first. The hook-and-loop fastener should be located in the top left corner of the door, facing into the fixture.
- 14 Slide the left access door onto the bolts.
- 15 Install the right door second. The hook-and-loop fastener should be located in the top right corner of the door, facing into the fixture.
- 16 Slide the right access door onto the bolts, making sure the lamp wire goes through the cutout in the right access door.
- 17 Install and tighten all 3 thumb nuts on the access doors.
- 18 Pull the lamp housing back into place, rotate it to the desired position, and set the rotation lock.
- 19 Reinstall the trim.
