**KI List Product Price:** \$7,710 total or  
\$257 per linear foot

(Install and freight are not included)

# Genius Wall Touchdown Booth

## **Additional Information:**

- Does not include a ceiling as a standard.
- It is recommended per NFPA 13 “standard for the installation of sprinkler systems” to have 18 inches of clearance below the sprinkler deflector. (KI further recommends working with the local authority or architect to confirm how to layout the wall in relationship to the sprinkler system.)
- Minimum product ceiling height is 84” to maintain an 80” ADA clearance.
- Combining items #2 and #3, this solution will work in open areas where the actual suspended or drywall ceiling is 102” or higher.
- Maximum office size is 120” x 120”.
- KI recommends overlapping base solutions only.
- Anchorage to the floor is necessary in order to conform to the 2012 IBC Section 1607.14 code for wall products that exceed 6 feet (1829 mm) in height, including their finish materials, and providing adequate strength to resist the loads of not less than a horizontal load of 5 psf (0.240 kN/m<sup>2</sup>).
- All current Genius Wall finishes and panel types are available.
