KNUD HOLSCHER DESIGN

“Architects have a mind for unity. Therefore with the d line series I have attempted to accommodate most of the requirements found in building interiors; not only door handles, but also wardrobes, signs, handrails, and so on. In terms of design, coherence is the word; the series forms a unity in concert with the architecture”.

*- Knud Holscher,
Professor, Architect and Designer*

Knud Holscher's philosophy of functional and minimalist design has created continuity in d line's product line for 30 years.

The series now includes six individual product groups all built around the same design philosophy and visual language which, when combined, create a “total solution”.

d line's Total Solution complements the architect's ideas. The different components of the series tie the building together. Where door handles, wardrobes and bathroom interiors can sometimes appear as trivial add-ons to a building, d line's Total Solution provides a unity for all items – a unity which provides the building with added quality and complements the architecture. Visually strong without screaming out for attention.

In Knud Holscher's own words:
“Simple ironmongery is to a building what buttons are to a shirt – both accentuate colour and design qualities when they are elegant, but disturb the unity if they are gaudy”.

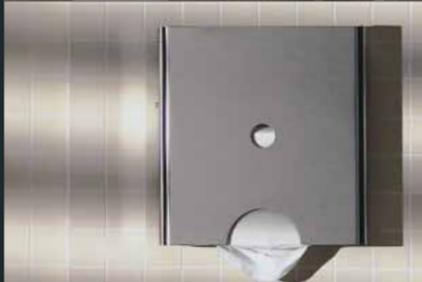

Hardware

Simple design and solid functionality are the hallmarks of all **d line** Hardware. Through co-operation with the leading architects on landmark projects over many years, **d line** has developed a complete design line that covers the many situations and solutions needed.

Behind the minimalist exterior hides cutting edge technology combined with world leading craftsmanship that ensure strength and functionality which make **d line** a life-long solution, and which have ensured that **d line** has been specified in leading buildings throughout the world. The combination of aesthetics and technology has resulted in **d line** being awarded numerous international design prizes.

Bathroom

The simplicity and functional design characterizing **d line's** Total Solution also characterise **d line's** solutions for the bathroom. In most buildings the bathroom is a confusion of different styles. With **d line's** however, it is the same consistent line that cuts through all fittings and all mountings. The acid-proof stainless steel surfaces are easy to keep clean. Hygiene is supreme. The overall impression is coherence.

Washroom

d line's prize winning washroom panels are a modular component system which implies a number of advantages both in the project phase and in use.

Separate units—from towel dispensers and waste bins to toilet roll holder and hand dryer—may be combined in more than 350 ways, so that the solution may be adapted to the individual project.

Unlike many other systems, d line's washroom panels are built into the wall. This solution accommodates all washroom needs with reduced space and one uniform location for user interface. Functional, minimalist and flexible.

Handrail

d line's handrail system is uniquely constructed of a number of standard modular components. This indicates that on site fabrication or welding is not required. Mounting is very simple with the components engineered to accommodate various on site conditions.

The strength of the system is further underlined by its approval by British Standard Institute.

The **d line** Handrail system includes an engineered concept for minimising the amount of custom bending required. The Omnibend connects individually tapered disks that can be added or subtracted to create the majority of angles encountered. Innovative connections, easy to install.

Wardrobe

The wardrobe system constitutes a simple, almost sculptural solution for storing clothes and may be adapted to any individual requirements due to its flexible design and construction.

With its visual elegance and modular assembly, the **d line** system offers a unique solution for offices, shops, lobbies, concert and conference halls.

The range is accompanied by a series of stand-alone components, hooks and hallstands, with expressive designed details. Simple and stylish.

Signs

For the first time it is possible to specify a minimalist sign system in stainless steel.

This permanence of expression is fused with all the different levels of flexibility that are needed to manage information in the modern environment. As well as offering interchangeable stainless panels combined with paper inserts, the range can also offer specialist interpretations including Braille and painted aluminium.

The modular nature of the system lends itself to free design manipulation whilst maintaining a minimalist aesthetic which unifies to different elements of the environments with superior function.
