Victor2 is a recycling solution that is appropriate for supporting larger work groups, conference rooms, and cafés. A mobile unit and two freestanding units are available.
▶ Specifying, pages 68

Mobile unit has three openings. Eight insert options are available to pick for the openings. These eight insert options contain English, Spanish, and French.

Receptacles contain features to accommodate oversized bags.

Four non-locking casters are standard. Two casters swivel, and two casters are fixed. Move unit from the swivel casters side. Unit moves from the right in the direction of the swivel casters. Receptacles fit bags from 30 gallon size and larger.

Freestanding unit has four or five openings. Eight insert options are available to pick for the openings. These eight insert options contain English, Spanish and French.

Leveling glides are fully adjustable up to 1½".

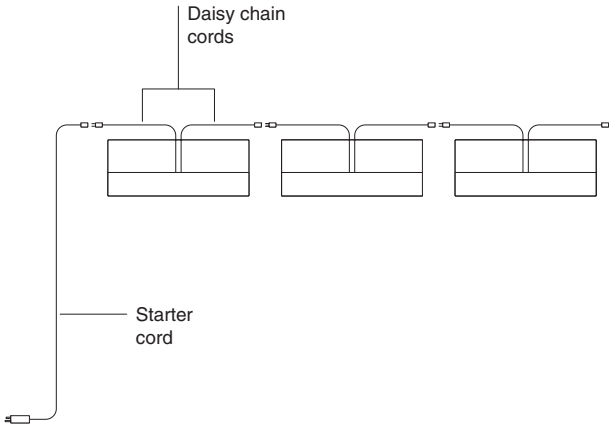
Daisy Chaining

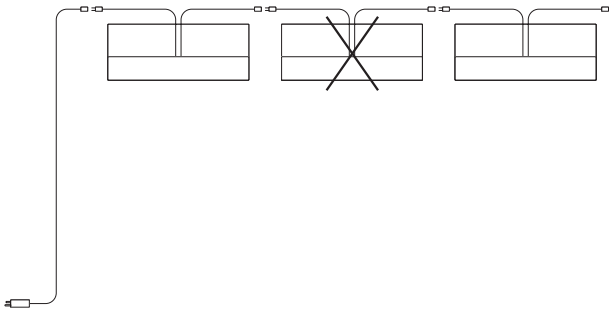
For Standard, Utility2, and Bottomline Lights

Daisy chaining shelf lights together extends power from one fixture to another within workstations to help keep receptacles clear for other uses.

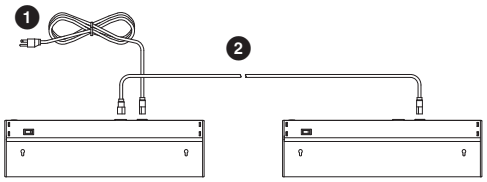
For Standard shelf lights, starter cord is required with daisy chain cords to bring power to the first shelf light in a daisy chain so there's no need to designate where each fixture will be used within the chain.



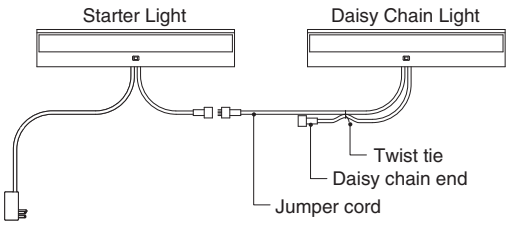
Power will not be interrupted in a chain even if one of the shelf lights is turned off or its lamp has burned out. That's because the path of power through the chain doesn't pass through the lamps or switches.



For Utility2 lights, connect the power cord ❶ between the first light and the wall receptacle. Connect the jumper cord ❷ between the lights. Maximum distance betweeen receptacles for 78" jumper is 74".
Tip: Connect up to 10 fixtures maximum. Voltage and current rating of fixture is 120 volt, .75 amps.
Starter light is required with daisy chain lights to bring power to the first light in the daisy chain.



For Bottomline lights, starter light is required with daisy chain lights to bring power to the first light in the daisy chain.



Tip: Daisy chaining is not allowed in Chicago. Local electrical codes vary, so you should consult a qualified electrical contractor or engineer for proper installation of all electrical equipment.

Tip: Overhead cabinets and shelves provide a recessed area for shelf lights. They are not designed to conceal cords when daisy chaining.

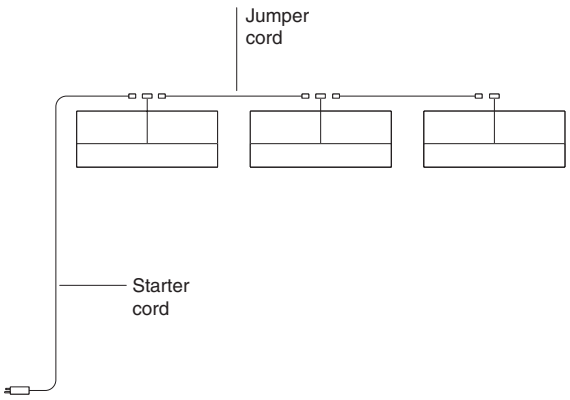
Tip: When using upmount brackets with overhead storage and daisy chaining lights, use the open design upmount bracket for better cord management.

Daisy Chaining

For Underline Lights

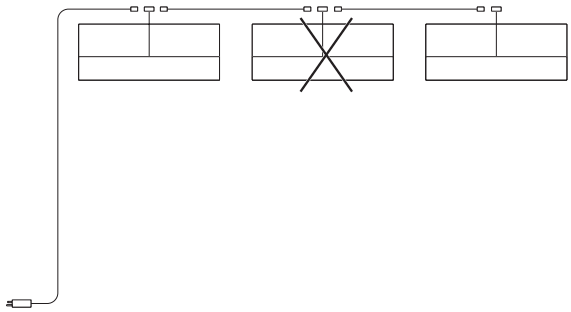
Daisy chaining lights together extends power from one shelf lights to another within workstations to help keep receptacles clear for other uses.

Starter cord is required on shelf lights with daisy chain cords to bring power to the first shelf light in a daisy chain so there's no need to designate where each fixture will be used within the chain.

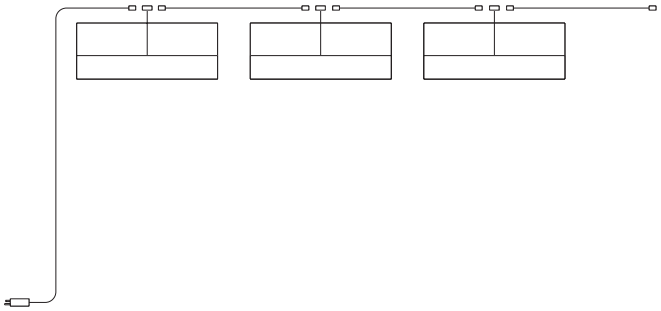


Jumper cord is required to connect daisy chain lights.

Power will not be interrupted in a chain, even if one of the shelf lights is turned off or its lamp has burned out; because the path of power through the chain does not pass through the lamps or switches.



Additions to a chain are possible at any time by adding a jumper cord.



Tip: Daisy chaining is not allowed in Chicago. Local electrical codes vary, so you should consult a qualified electrical contractor or engineer for proper installation of all electrical equipment.

Tip: Overhead bins and full-height shelves provide a recessed area for shelf lights. They are not designed to conceal cords when daisy chaining.

Tip: When using upmount brackets with overhead storage and daisy chaining lights, use the open design upmount bracket for better cord management.

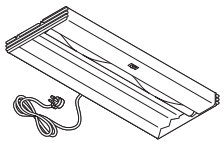
Standard Shelf Lights

Tip: Daisy chaining shelf lights together extends power from one fixture to another within workstations to help keep receptacles clear for other uses.
▶See page 120 for more information.

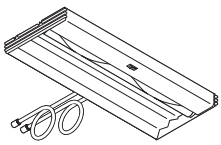
Tip: Daisy chaining is not allowed in Chicago. Local electrical codes vary, so you should consult a qualified electrical contractor or engineer for proper installation of all electrical equipment.

Tip: Because shelf lights are usually recessed, black is the standard paint color. Paint colors other than black have an upcharge.

Tip: If an optional paint color is selected for the housing, the electrical switches and end caps will remain black plastic.



Tip: When ordering with standard power cord or Chicago cord, daisy chaining is not possible.



Tip: Remember to order a daisy chain starter cord separately.

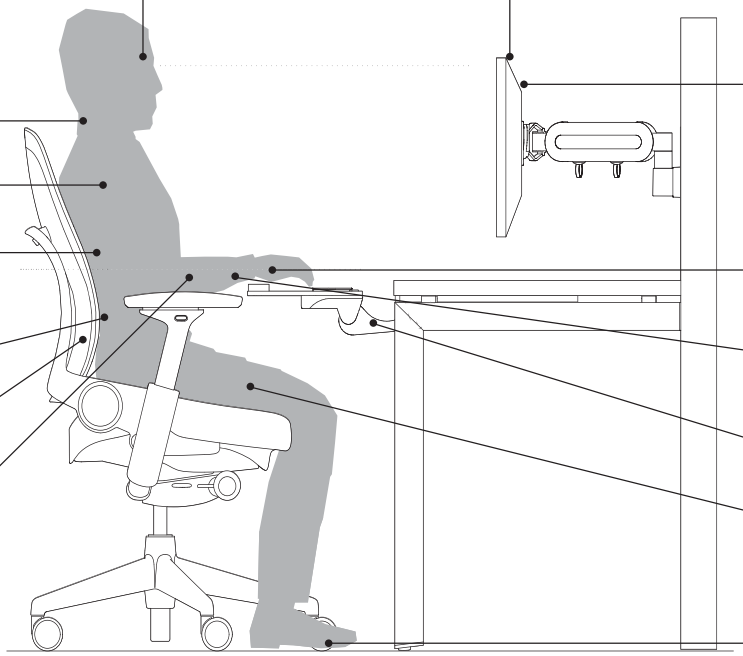
Basics of Ergonomic Computer Support Tools

Proper ergonomic worktools and seating can help workers perform more efficiently and avoid muscle and eye strain.

Screen is 20" to 30" from the eyes.

Top of monitor should be at eye level.



Neck is straight or slightly forward.

Shoulders are relaxed so arms hang naturally.

Back has full contact with the backrest (sit all the way back in your chair).

Lower back fits into curved lumbar support.

Tension is adjusted so backrest tilts easily, yet provides smooth, even support.

Elbows and forearms can rest comfortably on the arms of your chair, or on worksurfaces that are used for writing, paperwork, and other tasks.

Screen is at eye level slightly lower and directly in front of worker so head is not turned.

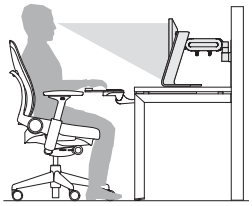
Wrists should be straight when keying or mousing, not bent up or down.

When keying or mousing, forearms are parallel to the floor.

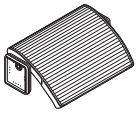
Keyboard is at elbow height.

Thighs are parallel to the floor.

Feet are flat on the floor or on a foot rest.



Keep frequently viewed objects, such as source documents, at or below the horizontal line of sight. Arrange display screen and documents to be equidistant from your eyes. See Freestanding In-Line Document Support, page 218.



If worksurfaces and keyboard support are not height-adjustable, raise your chair's seat height to achieve the appropriate relationship to your tasks. If this leaves your feet dangling above the floor, use a foot rest.
▶See page 219

Laptop Support

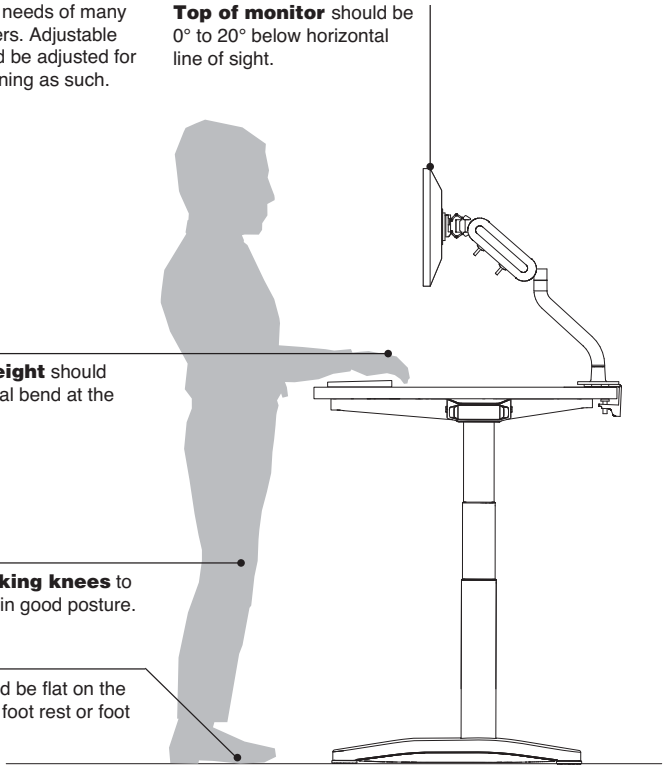
Frequent or extended use in cramped posture positions increase risk of damage to the spine, neck, shoulders, and legs.

To maintain good posture wherever you work, a separate keyboard, a mouse, and Mobile Collapsible Laptop Support are recommended.
▶See page 219

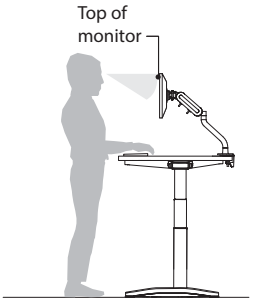
To reduce eyestrain and unhealthy postures when using laptops, an external full-size monitor with external keyboard and mouse is recommended.

Basics of Monitor Arm Positioning

Monitor arms offer varying levels of adjustability to meet the needs of many types of users. Adjustable arms should be adjusted for best positioning as such.

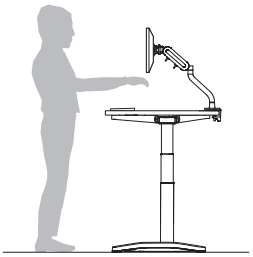


Height



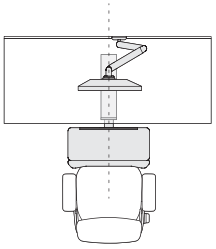
Top of the monitor should be positioned at or slightly below eye level.

Distance



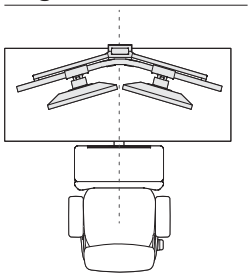
Monitor should be 20" to 30" from the eyes or approximately an arm's length away.

Alignment

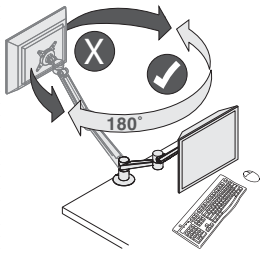


Proper alignment is the key to preventing strain. Computer monitor, keyboard, and mouse should be centered to allow user to see the display without looking downward or to either side. Mouse should be accessible without twisting or reaching. Reference documents should never be flat on desk and should be at the same height as or aligned with the monitor or above keyboard and below the monitor.

Dual Monitor Alignment



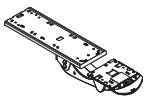
If using two monitors, position the monitor used more often closer. If equally used, center monitors directly in front and angle them in a slight inward "V" shape.



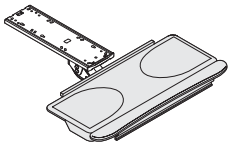
Monitor arms are not intended for use in applications where the monitor extends beyond the perimeter of the worksurface.

Keyboard Supports Basics

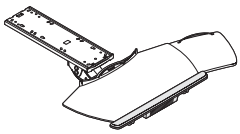
Keyboard supports are comprised of a mechanism and track, a keyboard platform that includes a variety of mouse surfaces and palm rests options. The components can be ordered individually or as assemblies. Below are illustrations to guide you in your selection.



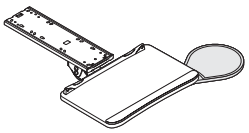
Mechanisms are orderable individually or with a standard track to insure stowing under worksurfaces. See D on chart below.
▶See *Mechanisms and Tracks,* page 154.



Keyboard platforms are available in a variety of options.
▶See *Keyboard Platforms and Palm Rests,* page 157.



Palm rests are options on all platforms or can be ordered separately.
▶See *Keyboard Platforms and Palm Rests,* page 157.



Mouse surfaces are options for all platforms.

How to Specify a Keyboard Assembly

1. Determine workstation configuration – straight, 90°, radius, or diagonal
2. Measure the depth of clearance on underside of worksurface to attach track to determine track length and mechanism to use.
3. Select platform depending on needs of the keyboard size and mouse location preference.

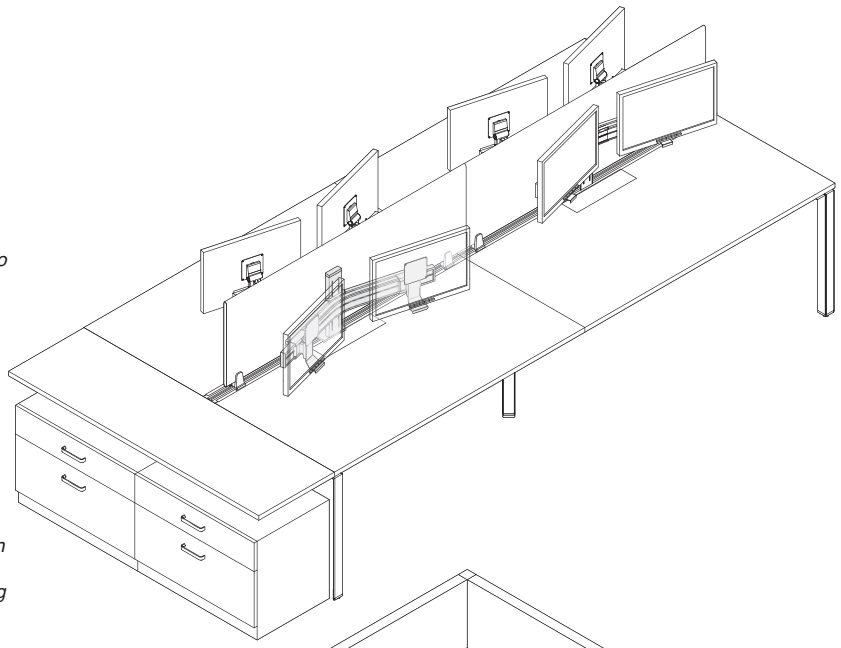
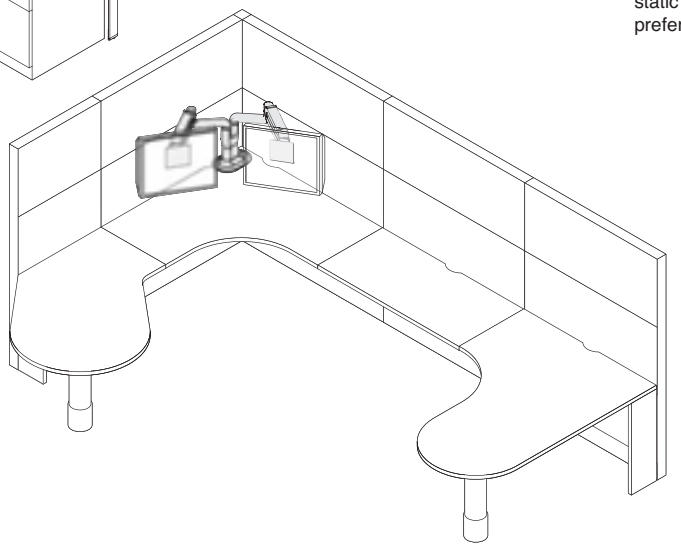
Flat panel monitor arms are available in four series: Eyesite, CF Series, FYI, and Volley. Eyesite monitor arms can support one to six monitors. CF Series monitor arms supports up to two monitors. FYI monitor arms support up to two monitors. Volley monitor arms are for single monitor use.

Tip: All Steelcase monitor arms utilize the VESA hole pattern to connect monitor to arm. Apple monitors do not connect without optional adapter plate. Plate must be acquired through Apple.

Tip: Attaching monitor arms to freestanding tables with casters or glides, including height-adjustable tables with less than three legs, is not recommended due to tipping hazards.

Tip: When attaching flat panel monitor arms to integrated rail on Ology, from either end of the rail, there is a 5½" mounting free zone.





Flat panel monitor arms are for use in C-clamp, through-mount, FrameOne, c:scape, and Ology. CF Series and FYI flat panel monitor arms are also for use with Slatwall and SlatRail applications. Volley flat panel monitor arms are available with C-clamp/through-mount, or Slatwall/SlatRail applications only.
▶See *individual series for application limitations.*

To select appropriate flat panel monitor arm, determine mounting application, number of monitors to be supported, weight of monitors to be supported, and whether a dynamic or static arm movement is preferred.

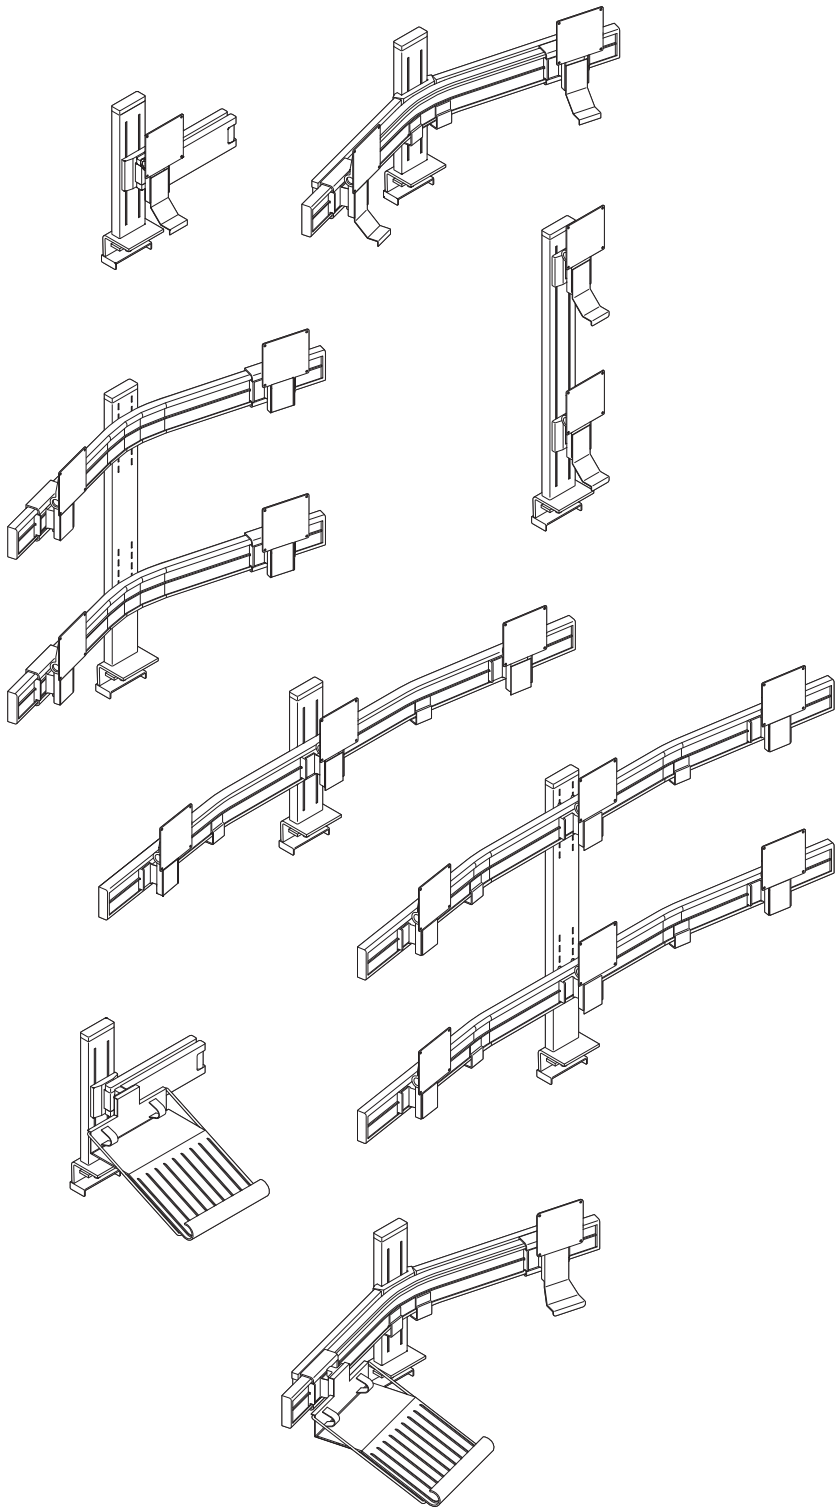
Eyesite

Eyesite display supports are available in several variations: single, dual, or triple monitor; one-over-one, two-over-two, and three-over-three; and single and dual laptop display supports.

Quick connect is standard on all Eyesite supports.

Cable management is included on all Eyesite display supports.

Tip: All Steelcase monitor arms utilize the VESA hole pattern to connect monitor to arm. Apple monitors do not connect without optional adapter plate. Plate must be acquired through Apple.



Product Details

Eyesite arms allow for monitor to rotate portrait to landscape orientation.
Tip: Eyesite is not permitted of use on Elective Elements Technology Worksurfaces.

Eyesite mounting brackets are available in C-clamp, through-mount, FrameOne, c:scape, Ology, and Bivi applications.

Mounting brackets must be ordered separately.

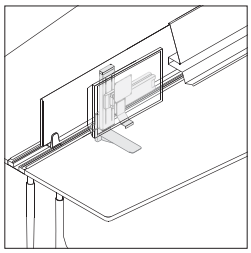
To adust the height of the monitor, use the supplied Allen wrench or use a 5/32 hex bit. Turn the adjustment nut right or left to make the monitor go up or down.

All Steelcase monitor arms utilize the VESA hole pattern to connect monitor to arm. Apple monitors do not connect without optional adapter plate. Plate must be acquire through Apple.

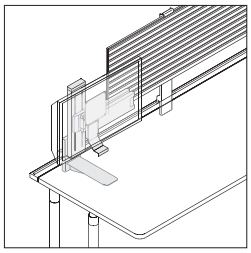
Application Topics

Standard columns can be used with monitor screens 20" or greater.

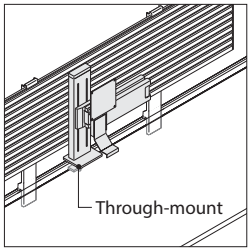
Extended columns can be used with monitor screens 17"–19".



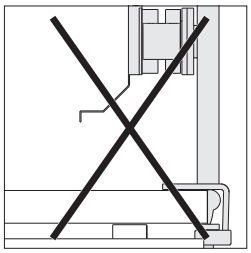
When mounting, Eyesite arms should only be mounted to c:scape desks that are tethered to either the beam, another desk, or 1½-High low storage with a connect zone.



Slatwall or SlatRail can be mounted on either side of Eyesite display supports.



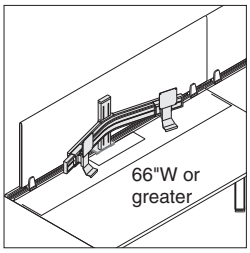
Eyesite cannot be C-clamped in front of Stanchion mounted Slatwall or SlatRail. For this application, a through-mount bracket is recommended.



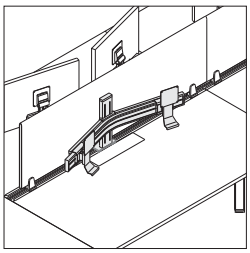
Monitor arms and supports with C-clamp brackets are not recommended on Universal Tables with P-edge as the user's edge wraps all the way around table.

C-clamp brackets can be used with Universal Systems worksurfaces with a P-edge as it is applied to the front edge only.

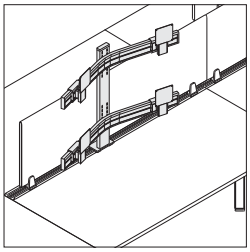
Monitor cables that connect to the rear of the monitor near the VESA plate will not fit properly with the Eyesite monitor arm. Use right angle IEC cords or choose FYI or CF Series arm.



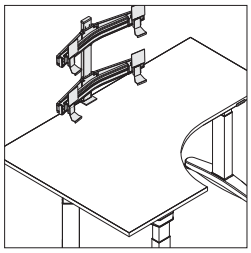
When mounting dual or triple Eyesite on standalone, single-sided FrameOne base units, the worksurface must be 66"W or greater and must be used with Eyesite standard crank adjustable column only.



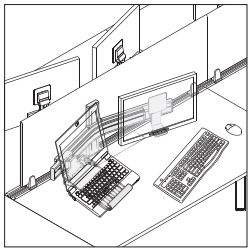
Eyesite columns may be mounted back to back on double-sided FrameOne worksurfaces when using FrameOne brackets.



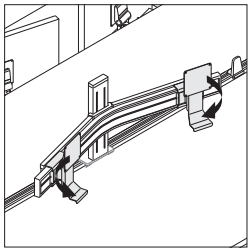
Bar-over-bar applications utilize the 26" extended static column only. Bar-over-bar is not permitted on c:scape, Bivi, or Big Table. Bar-over-bar may be used with FrameOne utilizing the static, non-focal adjusting dual and triple static yokes.



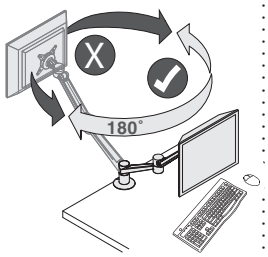
Bar-over-bar applications may be used with Ology, Series 3, 5, and 7 worksurfaces with three column base configurations. Bar-over-bar applications are not permitted for use with Airtouch, any Ology, Series 3, 5, or 7 worksurfaces with two column-base configurations, or any free-standing table with casters.



Eyesite single and dual laptop supports are not recommended for use with docking station. External keyboard and mouse are recommended.
Tip: Bivi bracket to be used with Eyesite single support, dual display support, single laptop support, and dual laptop support with extended crank adjust columns only.



Eyesite assemblies, components, and VESA bracket assembly-slide are available with a pivot option to allow greater angle flexibility of individual monitors and enable booking.



Monitor arms are not intended for use in applications where the monitor extends beyond the perimeter of the worksurface.

When using CF series single arm with CFDUALBAR dual monitor support, the heavy-duty spring tilt head is required.

CF Series pole arms and components are available to allow various configurations to meet user needs.

CF Series pole arms are standard with 75/100 VESA plate and tilt head. A heavy-duty spring tilt option is available.

Evolution single and dual monitor arms are standard with C-clamp bracket.

CF Series arms allow for monitor to rotate portrait to landscape orientation.

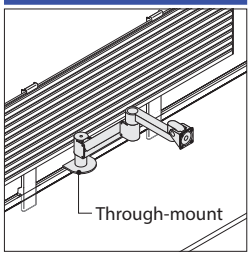
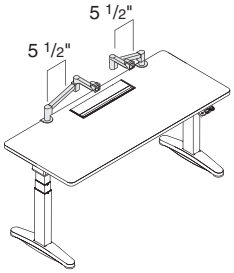
CF Series arm mounting brackets are ordered separately, with the exception of the desk-clamp/grommet/through-mount bracket (CF500CTM, for example, comes with the CF500 monitor arm and desk-clamp/grommet/through-mount bracket).
Tip: Dynamic arm systems come with clamp assembly option.

All Steelcase monitor arms utilize the VESA hole pattern to connect monitor to arm. Apple monitors do not connect without optional adapter plate. Plate must be acquired through Apple.

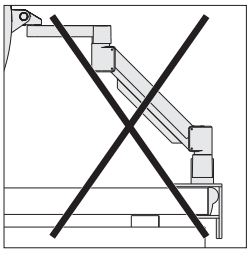
Application Topics



CF Series cannot be mounted in front of stanchion mounted Slatwall when using C-clamp bracket. For this application, a through-mount bracket is recommended.
Tip: Double-arm pole is not recommended for use with either Slatwall or SlatRail mounting brackets.



CF Series T-shape dual-base and CF2500 maximum-duty monitor arm are not available with c:scape brackets and must be C-clamped 5½" to the left or the right of the power access door on Ology.

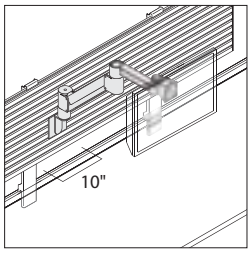


Monitor arms and supports with desk-clamp/grommet are not recommended on Universal Tables with P-edge as the user's edge wraps all the way around table. C-clamp brackets can be used with Universal Systems worksurfaces with a P-edge as it is applied to the front edge only.
Tip: CF Series arms should only be mounted to c:scape desks that are tethered to either the beam, another desk, or 1½-High low storage with a connect zone.
Tip: When planning with stand-alone, single-sided FrameOne base units, the worksurface must be 66"W or greater and utilize no more than one single CF Series flat panel monitor arm.
Tip: FrameOne and c:scape CF Series brackets have a maximum load limit of 30 lb.

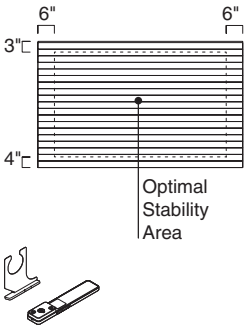
CFP28 is not recommended for use with single-sided FrameOne, c:scape, or any freestanding applications.

CF Series display supports are compatible with touch screen monitors.

Monitor arm assemblies with more than two monitors are not allowed on non-tethered desks.



When mounting CF Series arm brackets to Slatwall, bracket must be mounted no further than 10" away from Slatwall mounting bracket. If application does not allow bracket to be installed within the 10" range, an additional bracket or brackets should be installed within 10" of desired arm location.
Tip: Slatwall skin brace package is required when mounting a flat panel monitor arm on an Answer slatwall skin.
Tip: Single monitor arm can be mounted on 12"H slatwall skin that has an installed brace package.
Tip: Two single or one dual monitor arm can be mounted on 18"H or 24"H Answer slatwall skin that has an installed brace package. For optimal stability, the monitor arm should be mounted as shown below:



When optioning both integrated rail and power access door on Ology, CF series arms (excluding CF Series T-shaped dual-base and maximum-duty monitor arm) can be attached with c:scape brackets behind the power door.

LED with bracket is available for use with CF Series monitor arms.

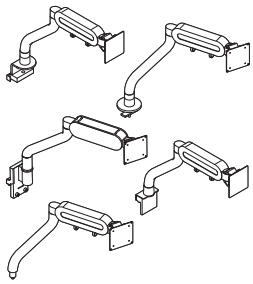
Product Details



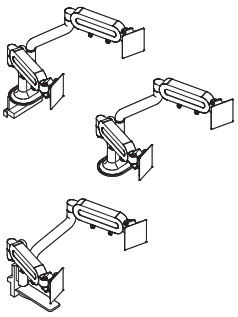
FYI single flat panel arms are available with or without brackets.

Mounting brackets must be ordered separately.

FYI Flat panel arms allow for monitor to rotate portrait to landscape orientation.

Single FYI flat panel arm has a focal adjustability range of 4½" to 24" and vertical adjustment range of 11½".

Single FYI flat panel arm supports monitor weighing 5 to 20 lb and up to 30" diagonal.



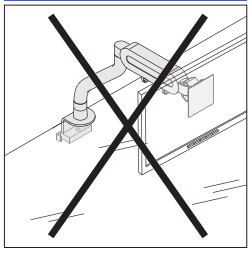
FYI dual flat panel monitor arms are standard with brackets – C-clamp, through-mount, wall-mount, Slatwall/SlatRail, and c:scape.

Dual FYI flat panel arm has a focal adjustability range of 4½" to 24" and vertical adjustment range of 11½".

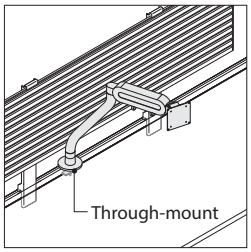
Dual FYI flat panel arm supports monitors weighing 2 to 20 lb and accommodates monitors 19" to 27". It is not recommended to use an FYI dual flat panel arm on a 24" deep worksurface due to lack of focal depth adjustment.
Tip: The larger the monitor, the less focal adjustment. 27" monitors are limited to approximately 19" of forward travel from the back of the worksurface.

All Steelcase monitor arms utilize the VESA hole pattern to connect monitor to arm. Apple monitors do not connect without optional adapter plate. Plate must be acquired through Apple.

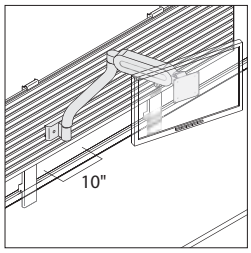
Application Topics



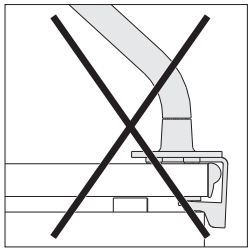
FYI single and dual flat panel arms cannot be mounted to glass surfaces and are not intended for use with touch screen monitors or monitors with built in CPUs.



FYI single cannot be mounted in front of stanchion mounted Slatwall when using C-clamp bracket. For this application a through-mount bracket is recommended.

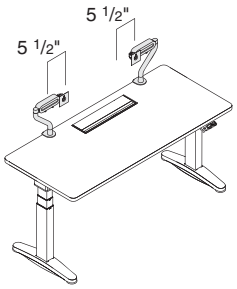


When mounting FYI single flat panel arms to Slatwall, bracket must be mounted no further than 10" away from Slatwall mounting bracket. If application does not allow bracket to be installed within the 10" range, an additional bracket or brackets should be installed within 10" of desired arm location.

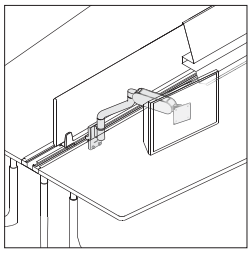


Monitor arms with C-clamp mounts are not recommended on Universal Tables with P-edge as the user's edge wraps all the way around table.

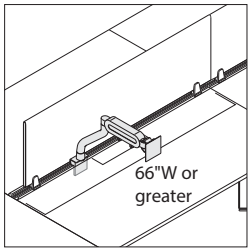
C-clamp brackets can be used with Universal Systems worksurfaces with a P-edge as it is applied to the front edge only.



When mounting FYI to Ology with integrated rail and/or power access door, c:scape brackets may not be attached behind the power access door, and must be mounted 5½" to either side.

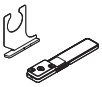


When mounting FYI single and dual flat panel monitor arm on c:scape, the desk must be tethered to the c:scape beam, back of another desk or 1½-High low storage file.

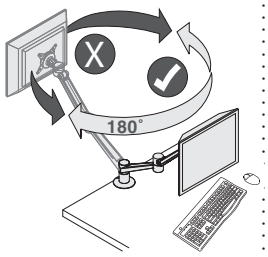


When mounting FYI single on stand-alone, single-sided FrameOne base units, the worksurface must be 66"W or greater and utilize one monitor arm only.

Slatwall/SlatRail or wall-mount brackets for FYI upper arm, FYI tilt/pan, and FYI single arm must be ordered separately.



LED with bracket is available for use with FYI flat panel monitor arms.
▶ See page 296



Monitor arms are not intended for use in applications where the monitor extends beyond the perimeter of the worksurface.

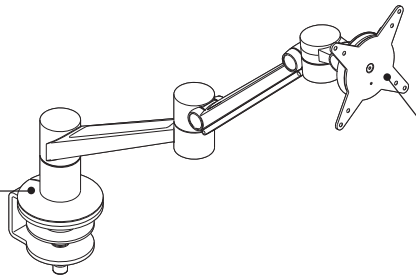
Volley Flat Panel Monitor Arms and Supports

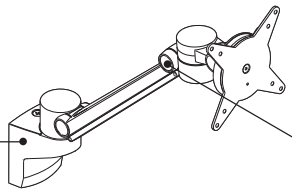
Volley flat panel monitor arms offer dynamic height-adjustment with a 9½" minimum vertical range.

Volley uses Single Direction Bearings (SDB) in height adjustment mechanism to allow for no minimum weight requirements.



Universal C-clamp/ through-mount mounting bracket

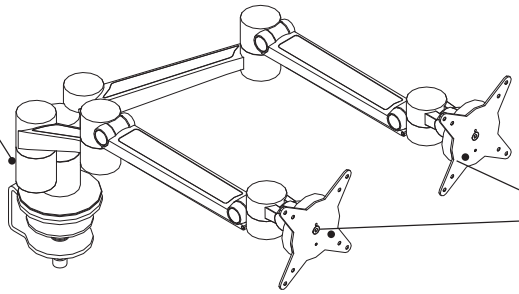
Volley flat panel monitor arm is standard with 75 mm/100 mm VESA plate quick connect.



Slatwall/SlatRail mounting bracket

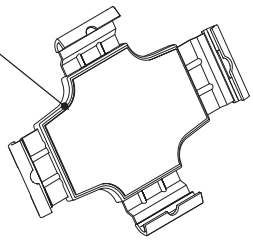
Swivel limiters prevent Volley flat panel monitor arms from colliding with screens or walls.

Integrated cable management is standard on Volley flat panel monitor arms.

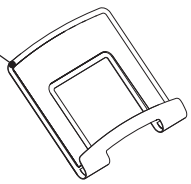


Dual Volley supports two monitors, a single monitor and laptop holder, single monitor and tablet holder, or tablet holder and laptop holder.

Tablet holder supports a tablet from 8¾" to 10⅜" in length by 6" to 7½" in width.

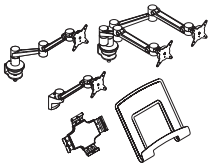


Laptop holder supports a laptop up to 15 lb and 11⅘" in length and width.



Tip: All Steelcase monitor arms utilize the VESA hole pattern to connect monitor to arm. Apple monitors do not connect without optional adapter plate. Plate must be acquired through Apple.

Product Details



Volley flat panels monitor arms are standard with a universal C-clamp/through-mount bracket or Slatwall/SlatRail bracket.

Dual volley is available with a universal C-clamp/through-mount bracket. Dual volley is not available with a Slatwall/Slatrail bracket.

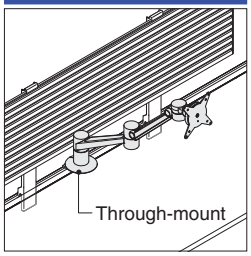
All Steelcase monitor arms utilize the VESA hole pattern to connect monitor to arm. Apple monitors do not connect without optional adapter plate. Plate must be acquired through Apple.

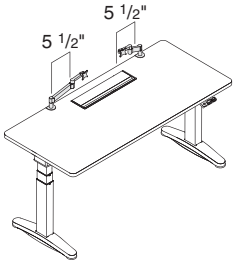
Application Topics



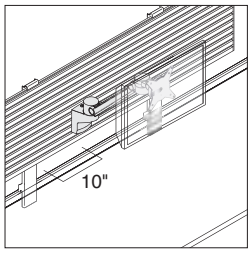
Volley flat panel monitor arms cannot be mounted in front of stanchion mounted Slatwall when using universal C-clamp bracket. For this application a through-mount bracket is recommended.

Volley display supports are compatible with touch screen monitors.

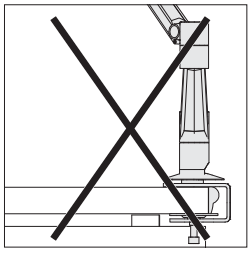
When mounting Volley to Ology with integrated rail, its one piece universal C-clamp design requires that Volley be mounted before integrated rail.



When mounting Volley to Ology with integrated rail and power access door, the universal C-clamp must be postioned 5½" either to the left or the right of the power access door.



When mounting Volley arm brackets to slatwall, bracket must be mounted no further than 10" away from Slatwall mounting bracket. If application does not allow bracket to be installed within the 10" range, an additional bracket or brackets should be installed within 10" of desired arm location.
Tip: Slatwall skin brace package is required when mounting a flat panel monitor arm on an Answer Slatwall skin.



Monitor arms and supports with universal C-clamp are not recommended on Universal Tables with P-edge as the user's edge wraps all the way around table.
