##### ASTM E1264 Classification

Composite – Fire Class A

##### Primary (Embodied) Energy

See all LCA information on our EPD's.

##### Application Considerations

Variation among panels may occur due to the natural characteristics of the wood and grain.

Use of large wood panels may result in deflection up to 1/8" and alignment inconsistency due to size and ambient conditions.

It is very important that WoodWorks panels are climatized prior to installation. Relative humidity between 25% and 55%, and temperatures between 50°F and 86°F must be maintained throughout the life of the product.

##### Design Considerations

For additional configuration ideas, refer to the WoodWorks Concealed Technical Guide, BPCS-4274, or visit armstrongceilings.com/woodworks

Do not mix different panel sizes with slotted perforations. Perforation borders will not align. The use of Armstrong Prelude suspension system is strongly recommended.

Cloud installations less than 6' wide are not recommended.

##### Specification Consideration

Attention: For FSC-certified wood products to maintain their CoC certification, products must be sold to a CoC-certified distributor or directly to the installing contractor. Failure to do so breaks the CoC.

##### Seismic Restraint

These systems have been engineered, tested, and approved for applications in all seismic areas when installed per Armstrong installation instructions.

##### Warranty
