the linea bench series

The Linea Bench Series, designed by Barcelona-based Mario Ruiz, provides an alternative approach to conventional seating areas. While initially designed to complement the Linea series in a conferencing environment, this enhanced bench offering is equally adaptable as seating in lounge, hospitality and commercial arenas. Benches are available in a variety of sizes, materials, and options that allow multiple configurations to maximize the footprint of these spaces.

01

Linea return units are easily reconfigurable as space requirements change. These returns are shown combined with the center unit that provides optional power/data access for powered accessories or digital connections. Benches are available in seven standard HBF veneers; featured is HBF's environmentally friendly Ligno- rain veneer in natural Caramel finish.

03

Linea bench seating areas may be specified in one-inch increments from 42" to 95" allowing customization of the unit to meet specific space requirements. This freestanding bench features an optional veneer insert in the center of the seating area. Upholstered cushions are permanently attached to the top surface.

02

This Linea freestanding unit with an extended back panel may also be specified with a lid that provides access to the internal storage area. The simple "L" shaped configuration consists of two return units combined with a corner unit to provide a useful integrated table surface.

04

A center unit with the veneer insert, two corner units and two returns assemble to create this "U" configuration. Constructed from walnut veneer in a natural Nutmeg finish with cushions upholstered in leather from HBF Textiles.

05

Linea supports the conference room with benches that provide additional seating capacities for large meetings and complements the beautiful Linea rectangular conference table accompanied by HBF's Cadre Series seating. Bench seating units may be specified in one-inch increments to provide maximum utilization of a space.

06

Two center units and two end units create an expansive horizontal form. Linea center unit seating areas are also available in one-inch increments from 42" to 95" and may be specified in any upholstery or leather.

07

End and corner units, as well as the center surface insert, are offered in optional surfaces of back painted glass and laminate materials in addition to all HBF standard veneers and finishes.

08

A compact power/data unit with removable grommet is optional on all Linea bench integrated table surfaces. End and corner units with the extended back panel have a small wiring egress opening between the back and top surface to facilitate wire management.

In addition to providing alternative seating solutions, benches are available with a hydraulically assisted lid that enables access to an internal storage area for equipment and supplies.

09

10

Linea dual depth freestanding benches are the perfect seating solution for spaces with minimal floor space; while providing a modern aesthetic when placed in expansive public spaces.
