Butterfly Beige is quarried in a bedrock quarry in Brazil. The color tone and structure of this granite will remain consistent from shipment to shipment. The quarry of Butterfly Beige is able to produce large amounts of blocks, therefore this product is perfect for projects and builder work. During the polishing process, an epoxy resin is applied to the surface of the stone to fill in any natural pits, cracks or fissures that may exist. This does not affect the durability, maintenance or beauty of the stone. It is possible for some of the more minute pits that are too small to effectively hold the resin, to reopen during other finishing stages. However, this will not detract from the overall quality or appearance of the stone. As a natural stone product, it is recommended that it be sealed to extend its longevity.
