

Donn® Air Diffuser

Features	The DONN® brand air diffuser provides air delivery and return for the ceiling system. Air is supplied through the lay-in diffuser, which is placed on the 2' x 2', narrow-suspension module. The plenum rests on the diffuser, which completes the installation. The diffuser can be used for return air as well as supply. However, air is more commonly returned through slots in light fixtures, a method which also helps cool lamps to more efficient operating temperatures.				
Components	<table><tr><td data-bbox="300 646 532 674">Diffuser</td><td data-bbox="532 646 1481 825"> – The DONN air diffuser interfaces with the ceiling surface to maintain visual appeal and provide a clean, discreet slot for air flow. – Designed to fit flush with FINELINE® suspensions and to provide a slight reveal edge for a bolder look with CENTRICITEE™ suspensions. – Four-way throw capability provides optimum directional control. – Available in one-, two-, three-, or four-slot versions for maximum flexibility in air delivery. </td></tr><tr><td data-bbox="300 846 532 873">Plenum</td><td data-bbox="532 846 1481 911"> The DONN air diffuser plenum is internally insulated and made of galvanized steel. The plenum nests into the diffuser frame and is available with standard collar sizes to suit air delivery requirements </td></tr></table>	Diffuser	– The DONN air diffuser interfaces with the ceiling surface to maintain visual appeal and provide a clean, discreet slot for air flow. – Designed to fit flush with FINELINE® suspensions and to provide a slight reveal edge for a bolder look with CENTRICITEE™ suspensions. – Four-way throw capability provides optimum directional control. – Available in one-, two-, three-, or four-slot versions for maximum flexibility in air delivery.
