emeco

FIRST LET'S MAKE THINGS THAT LAST.

The Emeco 1006 Navy Chair was first commissioned in the 1940s by the U.S. Navy for use on warships – the contract even specified that it had to be able to withstand torpedo blasts. Today our chairs are still made in the U.S.A., of 80% recycled aluminum, and are made by hand, by Emeco craftsmen using the original 77 step process. The world's best architects and designers collaborate with us to design chairs that are built and guaranteed to last a lifetime.

As we apply what we've practiced in the past, we are looking toward the future. We are on a mission to make a positive impact on the environment. Our goals are to use waste material in our products, use as little energy as possible in our manufacturing, generate a minimum of waste in the process, and build strong, durable, beautiful chairs that last through generations. We've been on the same mission since 1944 and we will continue to search for new ways to recover and utilize discarded materials and make products that last.

PLAIN

OR SU IN JAPANESE

SU seats in Cork, Eco-Concrete and Solid Reclaimed Oak.

SU by NENDO

With the invisible values of design, engineering and strength, the Emeco SU Collection follows the Japanese aesthetic of 'su' — meaning plain or unadorned — the idea that simplicity is not only modest, but could possibly be more appealing than luxury. SU Stools embody Emeco bones, both in form and choice of materials. SU has the iconic seat of Emeco chairs made since 1944, and is made of reclaimed and recycled materials discovered through our ongoing exploration of eco-conscious resources..

The SU collection features stools in three heights, with a choice of three frames and four different seat materials.

SU Cork seat. Cork is a natural, rapidly renewable material that is biodegradable and recyclable. It is light, sound absorbing, anti-bacterial and very resilient.

SU seats come in four material choices, all of which demonstrate an environmentally conscious way of doing things, using responsibly selected alternatives of some traditional materials.

The Recycled Polyethylene seat, made of 75% post-industrial and 25% post-consumer content, and shaped into the SU seat through rotation molding, comes in three timeless color options – red, flint gray and dark charcoal gray.

The Cork seat is molded from cork granules, ground from production off-cuts and scraps. Every single morsel of cork, such as the waste material created during wine stopper production, is collected and saved for recycling and turned into new products.

The Solid Reclaimed Oak seat is sourced from old architecture in the U.S.A., and carved into the Emeco seat by Amish craftsmen in Pennsylvania. Every piece is unique with signs of its past life.

The Eco-Concrete seat is made of Green-Concrete, a revolutionary concept that can replace the energy-consuming traditional concrete used in architecture. Emeco's Eco-Concrete SU seat consists of 50% recycled glass bottles and CSA (calcium sulfoaluminate cement) that takes much less energy to make.

SU Small stools with seats in Recycled Polyethylene, Cork, Solid Reclaimed Oak and Eco-Concrete.

SU stool with eco-concrete seat.

Original sketch by Oki Sato of Nendo illustrating the idea behind SU. SU has the iconic seat of Emeco chairs made since 1944, including the original 1006 Navy chair.
