Haworth Health Environments

Basic Operating Instructions For Sleeper Recliners and Trendelenburg Models

Lever Activated Foot Rest, Cup Lever Activated Infinite Locking Back Recline - Models 306-SR, 309-SR, 306-TSR

The recliner in the upright position with the transport foot tray extended. Pull to extend foot tray.

Using the long handle on the left side facing, lift the leg rest into its upright extended position.

The levers on the inside right side facing and exterior left side facing, allow the back of the recliner to recline into infinite positions, stopping exactly where the handle is released.

The back release can be used by healthcare professionals to assist the patient back into the seated position.

Trendelenburg Position (306-TSR Model Only)

Caregiver steps down on the Trendelenburg foot lever while also pushing down on the back to put recliner in the Trendelenburg position.

Caregiver steps down to release the Trendelenburg and return recliner to the lay flat position. Pull cup lever, lean forward and release to return the back to original position. Push side handle forward to return footrest to original closed position.

Haworth Health Environments

Basic Operating Instructions for Flex-Back Patient Chairs

Models 171PC1-FB, 171PC2-FB, 271PC1-FB, 271PC2-FB, 301PC1-FB,
301PC2-FB, 511PC1-FB, 511PC2-FB, 651PC1-FB, 651PC2-FB

Standard Position

Sit in chair, rest both hands on the unit's arms, and plant both feet squarely on the floor.

Fully Flexed

Lean backward to begin flex motion. Tension coiled spring pushes seat back into standard position.

Haworth Health Environments

Basic Operating Instructions for Glider Recliners

Models 307-G

Lock front casters to prevent chair from rolling.

Gliding

Lean backward to begin gliding motion.

Slightly pull on the arms to glide forward.

Reclining

Pull the cup lever on the handle to release the footrest and push back to the desired recline position.

Lean forward to return back to original position, pull cup lever and push down to return footrest to original position.

Haworth Health Environments

Basic Operating Instructions for Sleeper Chairs (Pull-Out Mechanisms)

Models 3001-PSLP, 3002-DPSLP, 3002-PSLP, 3011-PSLP, 5101-PSLP

Usage Information

Please read this entire tag to operate the Legacy sleeper chair safely and effectively. If you have any questions about the proper operation of the recliner, please ask your caregiver for assistance prior to use.

1. Lock front casters by stepping down on the locking tab to ensure the chair stays in place.
2. Pull outward using the front hand strap located under the top cushion until it comes out revealing the sub cushion.

3. With both hands, pull the sub cushion out and up and place it flat with the top cushion. This will offer leg support when fully expanded.

4. Once the sub cushion is set in place with the top cushion, pull outward once again using the hand strap until both cushion surfaces are extracted as far out as they can go.

5. The final step requires folding the back cushion down until it slides in place with the top cushion. This will offer head support when positioned properly.

6. The chair is now extended into its complete sleeping position. To put the chair into its original position simply lift the back cushion in it's upright position, place the sub cushion back below the top cushion and push back into sitting position.

Haworth Health Environments

Basic Operating Instructions for Pull Out Sleeper

Model 3012-PSLP-LAF/RAF
