

Repair and Replacement Instructions ■

Torsion on the Go! Seat
KI-62131RI 07/19//2012

1. Use a standard putty knife to pry off the small seat shroud.

2. Use a cordless drill and a #3 bit to remove the 7 screws holding the seat plate. Once the screws are removed, the seat will come off.

3. While holding the replacement seat, align the plastic spacers with the notch in the seat.

4. While holding the seat, place the seat plate over the spacers. Seats ordered after 06/15/12 \ require four 5/16-18 hex head bolts in each of the four corners. Seat plates have 7 slots.

5. Place the back of the seat shroud into the seat. Use the putty knife to lever the shroud into the front of the seat. The shroud will snap into place.
