

Assembly Instructions ■

Ruckus® Tote Storage

Casters & Glides

July 2019

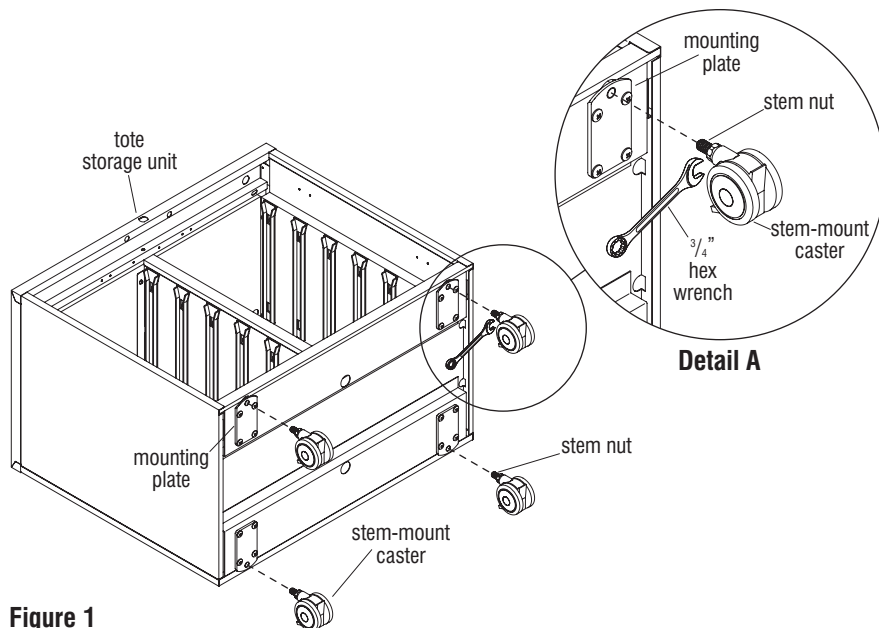

Figure 1

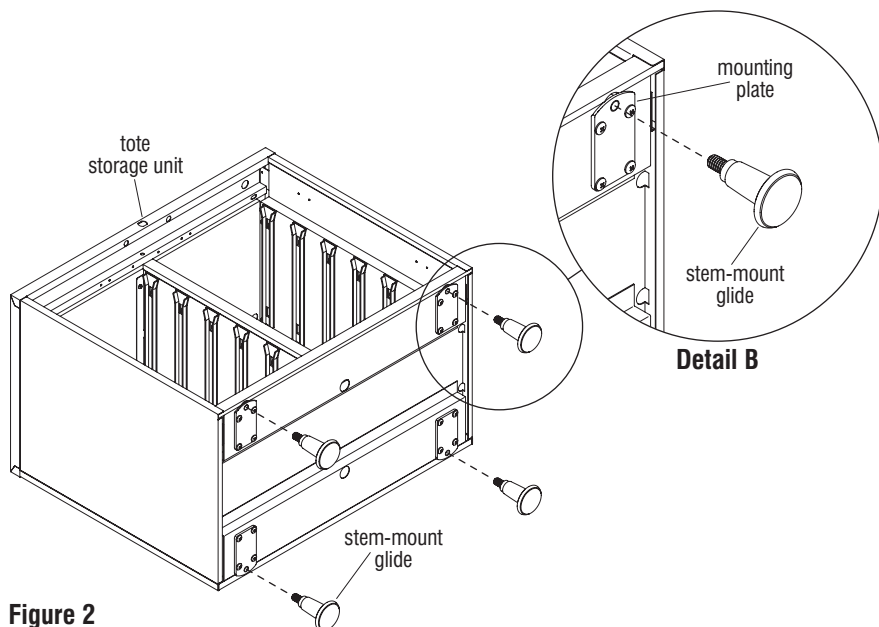

Figure 2

Assemble units as described herein only. To do otherwise may result in instability. All screws, nuts and bolts must be tightened securely and must be checked periodically after assembly. Failure to assemble properly, or to secure parts may result in assembly failure and personal injury.

Casters & Glides Installation

Note: Ruckus Tote Storage units arrive with caster/glide mounting plates pre-installed to the underside of the unit. Plates utilize either stem-mount casters or stem-mount glides.

1. Carefully lay the Ruckus Tote Storage unit onto a soft, protective surface, on its backside. **Caution:** The assistance of a second person is required to lay larger storage units onto their backs.
2. To attach stem-mount **casters**, thread the stem of each caster into the mounting plates at the bottom of the storage unit. Tighten the stem nut of each caster to the mounting plate using a $\frac{3}{4}$ " hex wrench (Figure 1).
3. To attach stem-mount **glides**, thread the stem of each glide into the mounting plates at the bottom of the storage unit and hand-tighten them. (Figure 2).
4. Once all casters or glides have been installed to the underside of the storage unit, carefully turn the unit to the upright position.
