FEATURES

Data / Power / VGA / Sound

Three standard strips are available with a variety of options.
 These units are used in conjunction with the Table Pad System or the Sliding Element
 Please specify Sliding Element for each power strip and End Power Cord
 Power Strips are connected together, see information on page 27
 Power plug feed runs down leg to outlet and may be covered with Vertical Cabling Cover

Leg Frames

Table tops are supported by elegantly curved frames which taper downward at an angle of 10°.
 They consist of a 3 1/2" wide steel band in chrome or powder coat finishes
 Two adjustable glides per leg allow for leveling on uneven floors
 Legs are connected to a traverse system that allows for stability and wire management

Modesty Panels

Modular Tables are offered with steel Modesty Panels
 Fixed beneath table top and angled with legs – 12 3/4" high, hangs at angle 12 5/8" below top.
 Offered in powder coat finishes only – no chrome on modesty panels

Table Series

- **Meeting Tables** – three shapes are available: round, square, and boat shape.
 Legs and required frame structure, including wire management, are included in price of table
- **Conference Tables** – two tops are available: a center and an end
 These may be combined together in straight lengths
 Legs and required frame structure, including wire management, are included in price of table
- **Modular Tables** – straights, ends, corners, and arcs
 These may be combined to form configurations of L-shapes, U-shapes, and circles
 Legs and required frame structure, including wire management, are included in price of table

Table Tops

Tops are made of high density particle board that is certified to meet emission standards as required by CARB Regulation 93120, Phase 1
 They are 1 1/4" thick with a beveled edge at 28°
 Standard veneers - Walnut, Oak, and Zebrano
TU-4134 small round table consists of 4-Quartered veneer pattern
 The grain direction is across the table depth, not length
 On corners or square tables the grain is mitered
 Special veneers and top sizes are available on request, contact Factory

Table Pad System

A system of leather pads offer a service mat for bottles or glasses – 7 1/2" depth
 It may also be used with a Sliding Element - 10 1/4" width x 7 1/2" depth - that opens to reveal power/data units, which are ordered separately

Traverse System

A natural anodized aluminum traverse system, 3 3/16" wide, connect the leg frames
 System supplies stability to the tops and allow for the attachment of a retractable anodized aluminum, hinged channel for power strips
 All power strips are fixed in the hinged channel and the connecting cables run in the hinged wired management tray

Vertical Cabling Cover

Two part vertical cabling that attaches magnetically to the inner side of the leg frame
 The cable-running channel is coated in black powder coat and is covered by a plate that is finished to match the leg frame
 It is recommended to specify covers to accommodate power and data separately
 Check number of runs of connected power units for number of covers needed

TUNE MEETING

How to Specify Power/Data for TUNE

Locate Power Source	The final power source location is where the cord must feed down the leg(s) to plug into, whether it is plugged or hard-wired according to code.
Determine # of Plugs	Determine the number of power plugs necessary for the number of seated participants at table and equipment to be used.
Determine Type of Data	Determine type of data need for equipment. RJ45 CAT. 5 or VGA (monitor/beamer) and minijack 3.5mm (audio) units are available as standard offerings. Cables come with units see specifications. Special units may be ordered contact Factory.

Power Network Each run of connecting power units will be a single 15-amp circuit.

You must calculate the amperage requirements of all your electrical components so you can provide sufficient electricity to power them.

The National Electrical Code (NEC) allows a maximum of 13 receptacles on each 20-amp circuit. Canadian Electrical Code allows a maximum of 10 receptacles on each 15-amp circuit. You will need to have your IT Department determine the office equipment amperage. Divide the wattage of a device by 120 to get the amps.

If the circuits are normally subject to a continuous load (three or more hours of continuous use, such as lights or computers), the NEC requires the circuit capacity be "de-rated" by 20 percent. Treat the circuits used for continuous loads as if they were rated at 16 amps instead of the regular 20 amps (12 amps in Canada instead of 15 amps).

Large equipment such as copiers or space heaters should be plugged into separate receptacles because they require the most of the current available on a 15- or 20-amp circuit.

Selected # of Power Plugs	After determining the number of power/data units connected, you need to specify the number of End Power Plugs needed for either plug in or hard-wire provisions.

Technical drawing of a mechanical assembly with dimensions in inches. The drawing shows a side view of a component with a central horizontal section and two vertical sections on either side. Dimensions are provided for various parts and overall measurements.

Vertical Dimensions (Left Side):

- Top section: $8\frac{7}{8}"$
- Middle section: $23\frac{7}{8}"$
- Bottom section: $8\frac{7}{8}"$
- Overall height: $37\frac{3}{8}"$
- Internal vertical offset: $7\frac{1}{2}"$

Horizontal Dimensions (Bottom):

- Left section: $16\frac{1}{8}"$
- First offset: $10\frac{1}{4}"$
- Second offset: $10\frac{1}{4}"$
- Third offset: $10\frac{1}{4}"$
- Right section: $16\frac{1}{8}"$
- Overall width: $59\frac{1}{2}"$
- Internal horizontal offset: $31\frac{1}{2}"$
- Right section: $39\frac{3}{4}"$
- Internal horizontal offset: $31\frac{1}{2}"$
- Far right section: $17\frac{7}{8}"$

Other Dimensions:

- Right vertical section height: $31\frac{1}{2}"$
