module with
USB

Figure 1

1. Position the Villa power/data/USB module under the worksurface beneath the cutout. Orient the notch in the module to face the user side (Figure 1).

2. Align the six mounting holes on the power module with the six pre-drilled holes in the work surface, then secure the bracket to the underside of the surface with the six screws provided (Figure 1).

3. Route the power cord as desired to an outlet and plug the module in (Figure 1).
