CELLPOD

Collaboration is seen as a key goal for the modern workplace and environments have become more open plan to facilitate this.

To work effectively people are looking for defined spaces to work individually with privacy or to come together as a team.

CellPod creates fully demountable

rooms, within an open plan space, that provide all the architectural qualities and services that you would normally associate with a traditionally built environment, from a furniture system.

CellPod defines space and provides the privacy and support for the immediate task at hand.

DESIGN

Senator

Our team of talented in house designers are responsible for creating elegant, innovative furniture designs which not only look beautiful, but minimise the impact on the world around us.

They come from all over the world, but are based in our Design Center located in a quiet Lancashire village just outside the Ribble Valley. Our dedicated facility is over three floors which include studios, a materials test center and prototyping lab.

STANDARD FEATURES (*Selected models only)

- · Structural framework
- · Toughened glass
- · Upholstered panels
- · Double power module
- · Double glazed hinged locking door
- · Ecophon acoustic ceiling
- · LED Lighting system activated by PIR
- · Air circulation system
- · Lighting control

OPTIONAL FEATURES

- Dry wipe panels
- · Magnetic dry wipe panels
- · "Soft Close" glass door
- · AV mounting bracket and power module
- · Air conditioning unit
- Horizontal power bar

SENATOR 3 R'S

Senator is committed to continually improving the sustainability of all environmental aspects within our business.

To meet both international standards and our own environmental targets we apply the three R's principle

-Reduce, Reuse and Recycle.

While recycling is the element which

receives the most exposure it is actually the last option available and should never be the prime target in anyone's battle to reduce waste.

It is our duty as individuals and as a company to initially attempt to **Reduce** usage. Then we should look to **Reuse** wherever possible and finally, only after these two processes have been exhausted, should we consider **Recycling**.

REDUCE REUSE RECYCLE
