

Tom Rossau

TR41 107 Floor

Cylinder in shape, the TR41 107 floor by Tom Rossau is made from vertical cascading slats carefully layered in place by local Danish artisans. The unique white material is a combination of paper and plastic, which provides a high level of quality, durability and opacity. A twist-like narrowing accent is located at the bottom half, creating an interesting asymmetrical effect between the upper and lower sections. The shade stands on a base of birch wood, to complete the look. The TR41 series is available in three different sizes, and as a pendant light, which can work both together and separately.
