Ordering Customer's Own Material (C.O.M.) Upholstery
Information

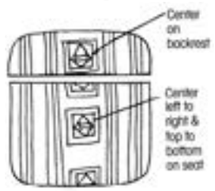
Ordering Customer's Own Material (C.O.M.) Upholstery
Information

How to Specify

As a standard procedure, KI applies seating upholstery as swatched by the textile distributor. Reference distributor's website. Upholstery that is required to be applied differently than is swatched, will need a Product Modification Request written specifying the direction the upholstery is to be applied.

Seating upholstery requiring specific positioning of intricate patterns or patterns repeats on seats and backrests, will need a Product Modification Request written including a sketch noting the specific requirements, as in Diagram A.

Diagram A



When directional or patterned fabrics are used, they often require more yardage than solid colors.

C.O.M. must be supplied in continuous yardage.

C.O.M. yardage requirements accompanying products in the pricing section are for 10 chairs/seats or less, 54" wide nondirectional material. On larger orders, less material is required.

Leather hides must be a minimum of 50 square feet of usable material. The outer edges cannot be calculated as square feet or yardage. To determine square footage, multiply unit yardage by 18 square feet to obtain the total square footage required per unit.

For exact production yardage requirements, call 1-800-424-2432, ext. 2707.

Production

Customer's upholstery must be approved prior to acceptance for production.

After approval, a memo swatch of the C.O.M. from the textile distributor must accompany the order. KI assumes no responsibility for wear, defects, or performance of C.O.M. upholstery.

C.O.M. not received into the appropriate facility 3 weeks prior to acknowledged delivery date may go on hold. See KI C.O.M. Shipping Location listing for the correct facility address by product.

Testing

When KI requires testing, actual yardage to upholster one chair may be required. The C.O.M. Specialist will confirm model and fabric testing requirements when applicable.

Approved test samples will be applied to the order or will be held for 6 months. After 6 months, the sample will no longer be applied to your order. For all product testing, send fabric samples to the manufacturing facility. See KI C.O.M. Shipping Location listing for the correct facility address by product.

All C.O.M. must be labeled with the KI product order number and customer purchase order number.

Treated Materials

If C.O.M. requires processing such as a stain resistance treatment or acrylic backing, it may shrink. To prevent delays in delivery or back ordering due to shrinkage, please have your processor verify measurement after processing and assure adequate yardage shipped.

Split Orders

If a portion of the shipment which does not require C.O.M. application is to be processed and shipped early, KI will enter the order immediately at your request. These split shipments are subject to minimum order changes.

Excess Upholstery Material

KI will dispose of excess upholstery material at the time of shipment unless expressly requested to return it with the product shipment.

Cancelled or Changed Orders

KI assumes no responsibility for extra C.O.M. due to a change of upholstery or cancellation of an order. If it the customer's responsibility to arrange for return of the material.

Contact the C.O.M. Specialist at 1-800-424-2432, ext. 2707, with questions or to request a split order.

INFORMATION

C.O.M. Testing and Production Requirements
Not all materials are suitable for upholstering this product. A 1 yd. x 54" sample must be submitted and approved prior to acceptance of an order. If the fabric is directional in pattern or weave, the direction must be indicated on the submitted sample, and additional yardage may be requested.

Test sample must be sent to:

KI
Attn: C.O.M. Storage
1687 Westminster Drive - Gate 3
Green Bay, WI 54302

Fabric Disclaimer
Fabric will be applied as swatched by the fabric manufacturer. Fabric that is required to be applied differently than is swatched will need a Product Modification Request written specifying the direction the fabric is to be applied.

Stacking Vinyl, Polyurethane, and Imitation Leather Upholstered Chairs
If stacking frequently and for long periods of time, it is recommended that upholstery other than vinyl, polyurethane or imitation leather be used to avoid impressions in the seat cushion. KI does not warrant the effects of stacking on stock or COM vinyl, polyurethane or imitation leather upholstery.

Katera™
General Information

KATERA STACK/GUEST CHAIR FEATURES

A. **Comfort**
Waterfall front seat edge eliminates pressure points for a long-term sit. Backrest and seat are designed to follow the curves of the human body, creating built-in contours that fit the user.

B. **Material Options**
Available in all poly, poly with upholstered seat, all wood, wood with upholstered seat or upholstered seat and back.

C. **Ganger Option**
Retractable ganger mounts to underside of chair frame. Gangs with arms or armless. Field installable.

D. **Optional Arms**
Available with integral polypropylene/glass-reinforced arms with a steel insert for maximum strength, designed for an open feel and additional room for users of all sizes.

E. **Glides**
Guest chair - optional black plastic, steel or felt snap-in glides are level with the floor to reduce wear. Glide caps are interchangeable and field-replaceable.

F. **Stacking**
Guest chair stacks 12-high on dolly and 6-high on floor (poly or wood). Transport dolly for ease of movement and storage.

KATERA CAFÉ STOOL FEATURES

A. **Contoured Comfort**
Backrest and seat are designed to follow the curves of the human body, creating built-in contours that fit the user. Waterfall front seat edge eliminates pressure points for a long-term sit.

B. **Material Options**
Available in all poly, poly with upholstered seat, all wood, wood with upholstered seat or upholstered seat and back.

C. **Height Options**
Available in 24" or 30" seat heights.

D. **Optional Arms**
Available with integral polypropylene/glass-reinforced arms with a steel insert for maximum strength, designed for an open feel and additional room for users of all sizes.

E. **Foot Ring**
Foot ring is ½" diameter steel wire.

F. **Glides**
Stool - Optional black poly, steel or felt snap-in glides are level with the floor to reduce wear. Glide caps are interchangeable and field-replaceable.

Katera™ 4-Leg Chair & Café Stools

Poly Seat & Backrest
The seat and backrest are injected in polypropylene copolymer with 15% foam. The seat and back each include four locations for attachment to the chair frame.

Wood Seat & Backrest
Wood seat and backrest are molded Beech plywood. The seat and back are stained to KI standard specification, then varnished with a UV polyurethane containing and color fading protectant. The seat and back each include four locations for attachment to the chair frame.

Optional Upholstered Seat & Back
Seat foam is molded to a nominal 15 mm thickness, attached to an injection-molded polypropylene liner board, then upholstered using a draw string process. Back foam is a nominal 5 mm thickness and is attached to an injection-molded polypropylene liner. The liner and foam are then inserted into an upholstered cover and secured with heat activated glue. The upholstered backs are finished on the lower edge with a black zipper. Attachment method for the upholstered seat and back is the same for poly seats and backs.

4-Leg Frames
Legs frames are made from 1.9 mm thick tubular D-shaped ($^{3}/_{4}$" x 1") steel. Steel wire and U-channels form the crossmembers. All joints are welded. Aluminum support brackets are inserted in the rear legs and allow the backrest of the chair to be secured. The support bracket hardware is concealed by a polypropylene cap, color matched to the frame paint. When chrome is selected, the caps will be chromed metal.

Café Stool Frames
Café Stool models are available in 4-leg frames, and in 24" and 30" seat heights. Frames are equipped with a reinforcing footring made of 17 mm diameter tube, which is welded to the tubular frame and open in the back. Stool models do not stack.

Frame Finishes
Frames are finished in either powder-coat paint, or bright nickel-chrome plating. The aluminum back supports are painted to match the frame color and will be polished when chrome plating is chosen.

Arms
Optional armrests are available. The armrests are injection-molded glass-reinforced polypropylene matching the frame finish (when frame finish is Chrome, arm color will need to be specified). The front of the arms include a steel insert for greater strength and method of attachment. The front part of the arms are inserted into the front legs of the chair and secured with screws. The rear part of the arms are inserted into the aluminum backrest support and secured with screws.

Glides
The leg tubes are capped with D-shaped ($^{7}/_{8}$" x 1 $^{1}/_{8}$") nylon leg end tube bodies that accommodate a snap-in steel glide which meets the floor. The four end tube glide bodies are different, depending on the leg in which they are inserted, due to the different shape of each leg. Each cap is numbered and includes notches to differentiate their placement. Polypropylene and felt glides are available on both 4-leg and café stool frames.

Gangers
Optional gangers are available. Gangers are retractable, made of chrome-plated steel wire and are mounted to the underside of the chair frame. Gangers are not available on stool frames.

Transport Dolly
Frame construction is welded tubular steel with black powder-coated finish and 5" wheels (two swivel and two fixed). All chair styles stack twelve high on a dolly and six high on the floor. Stool models do not stack.

XL Bariatric Chairs

Frame
Legs of 1" O.D. x 16-gauge high-strength tubular steel. The "kick back" rear legs increase structural integrity and add to stability. Side members and cross tube members are constructed of 1" O.D. x 14-gauge tubular steel. 11-gauge steel gussets are located on the front legs to increase strength and rigidity. All joints are manually welded. Formed 11-gauge steel brackets welded to the rear legs are used to support the backrest.

Tube End Caps (armless chair)
End caps are made of molded plastic. The end cap will match the frame color. With chrome, the end cap will be black.

Floor Glides
Available in chrome-plated steel or monochromatic plastic for standard four leg. (Black plastic on chrome frames).

Upholstered Seat
Seat is flat, 5-ply, $^{15}/_{32}$" thick, radiate Pine plywood (AraucoPly® or similar) fastened to the frame with four screws through T-nuts embedded in the wood seat. A 2 $^{1}/_{2}$" thick urethane foam cushion is glued to the seat.

Upholstered Backrest
Backrest is constructed from $^{1}/_{2}$" thick plywood with 1" thick urethane foam applied to the front, and $^{1}/_{2}$" thick urethane foam applied to the back. The backrest assembly attaches to the frame with eight steel screws that thread into T-nuts that are pressed into the wood backrest.

Armrests
Molded nylon pressed into the front and rear leg tubes. Armrests are monochromatic with frame. If the frame is chrome, colored armrests may be selected, otherwise if the frame is painted, the armrest color will match the frame.

Frame Finishes
30-sheen epoxy powder-coat paint is electrostatically applied. The dry coating is then fused and cured in a baking oven to form a smooth, continuous film. Finish is chemical resistant, hard, tough and mar resistant. Bright duplex nickel-chrome is applied to the frame in a twenty-two step process, making it impervious to staining, scuffing, scratching and corrosion.
