How to Specify

As a standard procedure, KI applies seating upholstery as swatched by the textile distributor. Reference distributor’s website. Upholstery that is required to be applied differently than is swatched, will need a Product Modification Request written specifying the direction the upholstery is to be applied.

Seating upholstery requiring specific positioning of intricate patterns or patterns repeats on seats and backrests, will need a Product Modification Request written including a sketch noting the specific requirements, as in Diagram A.

When directional or patterned fabrics are used, they often require more yardage than solid colors.

C.O.M. must be supplied in continuous yardage.

C.O.M. yardage requirements accompanying products in the pricing section are for 10 chairs/seats or less, 54" wide nondirectional material. On larger orders, less material is required.

Leather hides must be a minimum of 50 square feet of usable material. The outer edges cannot be calculated as square feet or yardage. To determine square footage, multiply unit yardage by 18 square feet to obtain the total square footage required per unit.

For exact production yardage requirements, call 1-800-424-2432, ext. 2707.

Production

Customer’s upholstery must be approved prior to acceptance for production.

After approval, a memo swatch of the C.O.M. from the textile distributor must accompany the order. KI assumes no responsibility for wear, defects, or performance of C.O.M. upholstery.

C.O.M. not received into the appropriate facility 3 weeks prior to acknowledged delivery date may go on hold. See KI C.O.M. Shipping Location listing for the correct facility address by product.

Testing

When KI requires testing, actual yardage to upholster one chair may be required. The C.O.M. Specialist will confirm model and fabric testing requirements when applicable.

Approved test samples will be applied to the order or will be held for 6 months. After 6 months, the sample will no longer be applied to your order. For all product testing, send fabric samples to the manufacturing facility. See KI C.O.M. Shipping Location listing for the correct facility address by product.

All C.O.M. must be labeled with the KI product order number and customer purchase order number.

Treated Materials

If C.O.M. requires processing such as a stain resistance treatment or acrylic backing, it may shrink. To prevent delays in delivery or back ordering due to shrinkage, please have your processor verify measurement after processing and assure adequate yardage shipped.

Split Orders

If a portion of the shipment which does not require C.O.M. application is to be processed and shipped early, KI will enter the order immediately at your request. These split shipments are subject to minimum order changes.

Excess Upholstery Material

KI will dispose of excess upholstery material at the time of shipment unless expressly requested to return it with the product shipment.

Cancelled or Changed Orders

KI assumes no responsibility for extra C.O.M. due to a change of upholstery or cancellation of an order. If it the customer’s responsibility to arrange for return of the material.

Contact the C.O.M. Specialist at 1-800-424-2432, ext. 2707, with questions or to request a split order.

INFORMATION

C.O.M. Testing and Production Requirements

Not all materials are suitable for upholstering this product. A 1 yd. x 54" sample must be submitted and approved prior to acceptance of an order. If the fabric is directional in pattern or weave, the direction must be indicated on the submitted sample, and additional yardage may be requested.

Test samples must be sent to:

KI
Attn: C.O.M. Specialist
1687 Westminster Drive - Gate 3
Green Bay, WI 54302

Design

Designed by Giancarlo Piretti and manufac-tured in the USA by Krueger International, Inc. under license from Pro-Cord S.p.A

KI Color Match Program

KI offers the additional option of color matching paint, polypropylene, or wood stain through Product Modification Requests. Contact Customer Service for details.

Whatever you imagine, whatever you require, KI's Color Match program lets you pick your color!

Color Match Process - Poly Seating Information can be found here.

Stacking Vinyl, Polyurethane, and Imitation Leather Upholstered Chairs

If stacking frequently and for long periods of time, it is recommended that upholstery other than vinyl, polyurethane or imitation leather be used to avoid impressions in the seat cushion. KI does not warrant the effects of stacking on stock or COM vinyl, polyurethane or imitation leather upholstery.

INFORMATION

Warranty

Refer to KI Terms & Conditions document or visit ki.com

Seat Shell and Backrest Articulation Mechanism

The backrest and seat are injection-molded polypropylene. The seat and backrest are joined by a pair of hidden articulation mechanisms, each consisting of a 14-gauge steel housing, twin 7-gauge levers and steel coil springs. While maintaining a one-piece shell appearance, this mechanism allows the backrest to recline up to 17 degrees of motion.

Optional Upholstered Seat and Back

Urethane foam is attached to an injection-molded polypropylene liner board, then upholstered using a draw-string process. Seat foam is molded nominal 1" thickness, and back foam is nominal 1/2" thickness. The flush-head fasteners that attach the back pad are color-matched to the polypropylene.

Wire Tower Base

A seat ring is made of 1/2" diameter steel wire and attached to the seat with 14-gauge steel brackets. Legs are 7/16" diameter steel wire, fully gusseted with 5/16" diameter wire. All joints are welded and frames are finished in bright nickel-chrome plating.

Wood Leg Base

The seat plate is die-cast aluminum, finished with baked-on electrostatically-applied epoxy powder-coat paint. Legs are turned from Beech, stained, and clear-coat finished. A steel insert with tapped end is inserted and pinned in each leg, then each leg assembly is attached to the seat plate with one 1/4-20 screw. X-brace is made of two zinc plated steel cable assemblies that attach to the legs with #10-24 screws.

Tapered Steel Leg Base

A seat ring is made of 1/2" diameter steel wire and attached to the seat with 14-gauge steel brackets. Inner leg wires are made of 1/2" diameter steel wire and are plug welded to tapered tubular legs. All joints are welded and the frames are finished in either baked-on electrostatically-applied epoxy powder-coat paint or bright nickel-chrome plating.

Fourstar Swivel Base

The under-seat support structure is a die-drawn 12-gauge steel plate. A 3/4" diameter steel pin is welded to the seat plate, allowing the seat to swivel on a nylon bushing housed in the base. Seat structure is finished with baked-on electrostatically-applied epoxy powder-coat paint. The fixed-height base is constructed of a polished die-cast aluminum fourstar base and a chrome-plated steel tube column.

Glides

The tapered steel legs and wood legs are equipped with swivel glides in a bright steel finish. The floor contact surface on the tapered steel leg is steel, and on the wood legs is natural nylon. The wire tower base can be equipped with black nylon or felt glides. Fourstar swivel base is equipped with black nylon glides only.

DIMENSIONS

STATEMENT OF LINE

All models are available in polypropylene seat/backrest, upholstered seat/ polypropylene backrest, or upholstered seat/backrest.

KI Color Match Program
KI offers the additional option of color matching paint, polypropylene, or wood stain through Product Modification Requests. Contact Customer Service for details.

Whatever you imagine, whatever you require, KI's Color Match program lets you pick your color!

Color Match Process - Poly Seating Information can be found here.

Stacking Vinyl, Polyurethane, and Imitation Leather Upholstered Chairs
If stacking frequently and for long periods of time, it is recommended that upholstery other than vinyl, polyurethane or imitation leather be used to avoid impressions in the seat cushion. KI does not warrant the effects of stacking on stock or COM vinyl, polyurethane or imitation leather upholstery.

TECHNICAL SPECIFICATIONS

Seat Shell and Backrest Articulation Mechanism

The backrest, seat, and shroud are injection-molded polypropylene. The seat and backrest are joined by a pair of hidden articulation mechanisms, each consisting of a 14-gauge steel housing, twin 7-gauge levers and steel coil springs. While maintaining a one-piece shell appearance, this mechanism allows the backrest to recline up to 17-degrees of motion.

Optional Upholstered Seat and Back

Urethane foam is attached to an injection-molded polypropylene liner board, then upholstered using a draw-string process. Seat foam is molded nominal 1" thickness, and back foam is nominal 1/2" thickness. The flush-head fasteners that attach the back pad are color-matched to the polypropylene.

4-leg and Caster Frames

Legs are made from 7/8" O.D. by 13-gauge tubular steel. A single ring of 1/2" diameter steel wire forms the crossmember. All joints are welded. An optional wallsaver configuration is available. The wallsaver configuration maintains 1/2" gap between backrest and wall by locking the backrest mechanisms in the upright position.

Sled Frames

Sled side frames are made from 3/4" O.D. by 13-gauge tubular steel. A single ring of 1/2" diameter steel wire forms the crossmember. All joints are welded.

Frame Finishes

Frames are finished in either baked-on electrostatically-applied 30-degree gloss epoxy powder-coat paint, or bright nickel-chrome plating.

Arms

Optional armrests are available. When equipped with arms, the support structure is a continuation of the rear leg, finished to match the frame color. The armrests are injection-molded glass-reinforced polypropylene. Arm color matches the frame finish, (except Chrome, hammertone, and metallic finishes; which match the outer shell poly color). The steel frame tube is inserted into a socket molded into the armrest, and secured with a screw.

C.O.M. Testing and Production Requirements

Not all materials are suitable for upholstering this product. A 1 yd. x 54" sample must be submitted and approved prior to acceptance of an order. If the fabric is directional in pattern or weave, the direction must be indicated on the submitted sample, and additional yardage may be requested.

Test samples must be sent to:

Stacking Vinyl, Polyurethane, and Imitation Leather Upholstered Chairs

If stacking frequently and for long periods of time, it is recommended that upholstery other than vinyl, polyurethane or imitation leather be used to avoid impressions in the seat cushion. KI does not warrant the effects of stacking on stock or COM vinyl, polyurethane or imitation leather upholstery.

INFORMATION

Warranty

Refer to KI Terms & Conditions document or visit ki.com

Glides

4-Leg Chairs

The bottom ends of the tubes are formed to be vertical where they meet the floor and the glides are pressed into them. Three glide options are available; felt, plastic, and steel. Felt and plastic glides have a swivel base and have easy-on/easy-off replaceable caps, which makes field replacement simple and efficient (plastic & felt caps are interchangeable). Steel glides have a non-swivel base and do not have interchangeable caps. No color options are available for glides.

Sled Base Chairs

Four glide options are available; non-skid, plastic, steel, and felt. Glides are attached to the chair frame with one screw each. All glides have easy-on/easy-off replaceable caps, which makes field replacement simple and efficient. All caps are interchangeable. No color options are available for the glides. Sled base chairs may also be ordered without glides.

Casters

4-leg chairs may be ordered with casters instead of glides. Casters are 50 mm O.D., double-wheel high-impact thermoplastic, available with hard or soft wheel surface, in black only.

Gangers

Optional gangers are available on armless 4-leg and sled base chairs only. Gangers are made of chrome-plated 3/16" diameter steel wire, mounted to the chair with an injection-molded nylon hub.

Transport Dolly

Frame construction is welded tubular steel with black powder-coated finish and 5" wheels (two swivel and two fixed). The dolly fits 4-leg or sled base chairs and has a capacity of twelve poly chairs or six upholstered.

ChangeUp™ Tablet Arm

ChangeUp tablet support is integral to the chair frame and consists of a 7/8" diameter solid steel rod welded to the front and rear support tubes. A three-piece molded plastic armrest is included and attached to the chair frame using a #10 x 2 1/2" Phillips pan head tapping screw.

The tablet mechanism consists a die-cast aluminum housing, upper and lower plastic bearings, and 11-gauge steel clamp and tablet board support plates. The tablet mechanism is clamped onto the chair frame over two plastic bushing halves and a 5/16" diameter by 1 3/4" hardened steel pin with a die-cast aluminum cap secured with two 1/4"-20 x 3/4" button socket head cap screws. The pin creates a solid 90° up/down pivot stop and the bushings provide a smooth, quiet operation. In the use position, the tablet mechanism rotates outward from the chair back an additional 20° and permits approximately 3 1/2" of adjustment for ingress/egress without stowing the tablet.

The tablet worksurface is 21" wide by 13 1/2" deep (235 square inches) is secured to the tablet board support plate with twelve #12 x 5/8" Phillips flat head tapping screws. The tablet board is made of 18 mm Baltic Birch plywood with .040" high-pressure laminate top surface and .02" thick phenolic backer surface for an overall board thickness of approximately 3/4". Edges are lacquered with a clear finish and sealed. The factory installed tablet assembly is not field installable and may not be removed.

Weight Rating

ChangeUp tablet arm can support a 250 lb static load.

Compliance

Doni seating is designed and manufactured to meet or exceed required ANSI/BIFMA X5.1-2011 Seating. Seat functional weight rating for Doni stack chair is 400 lb, as conducted by and within KI's Accredited Test Lab.

STATEMENT OF LINE

All models are available in polypropylene seat/backrest, upholstered seat/ polypropylene backrest, or upholstered seat/backrest.

INFORMATION

C.O.M. Testing and Production Requirements
Not all materials are suitable for upholstering this product. A 1 yd. x 54" sample must be submitted and approved prior to acceptance of an order. If the fabric is directional in pattern or weave, the direction must be indicated on the submitted sample, and additional yardage may be requested.

Test samples must be sent to:

KI
Attn: C.O.M. Specialist
1687 Westminster Drive - Gate 3
Green Bay, WI 54302

Design
Designed by Giancarlo Piretti and manufac-tured in the USA by Krueger International, Inc. under license from Pro-Cord S.p.A

KI Color Match Program
KI offers the additional option of color matching paint, polypropylene, or wood stain through Product Modification Requests. Contact Customer Service for details.

Whatever you imagine, whatever you require, KI's Color Match program lets you pick your color!

Color Match Process - Poly Seating Information can be found here.

INFORMATION

Warranty
Refer to KI Terms & Conditions document or visit ki.com

Seat Shell and Backrest Articulation Mechanism

The backrest and seat are injection-molded polypropylene. The seat and backrest are joined by a pair of hidden articulation mechanisms, each consisting of a 14-gauge steel housing, twin 7-gauge levers and steel coil springs. While maintaining a one-piece shell appearance, this mechanism allows the backrest to recline up to 17-degrees of motion.

Optional Upholstered Seat and Back

Urethane foam is attached to an injection-molded polypropylene liner board, then upholstered using a draw-string process. Seat foam is molded nominal 1” thickness, and back foam is nominal 1/2” thickness. The flush-head fasteners that attach the back pad are color-matched to the polypropylene.

Under-Seat Structure

Support structure is a die-drawn 12-gauge steel plate. Structure is finished with baked-on electrostatically-applied 30-degree gloss epoxy powder-coat paint coordinated with base selection.

Arms

Optional armrests are available. When equipped with arms, a support structure is 7/8” O.D. by 13-gauge tubular steel welded directly to the seat structure plate. The steel support tube is inserted into a socket molded into the armrest, and secured with a screw. Armrests are molded from glass-reinforced polypropylene. Structure and armrests are Warm Grey when Warm Grey base is selected, or Black when Black or aluminum is selected.

Base

The base is a 26” injection-molded glass-reinforced nylon 5-blade base. A single paddle under the seat operates the height-adjusting pneumatic cylinder. Standard chair base and cylinder available in Black or Warm Grey. Standard stool base available in Black or Warm Grey. Standard stool cylinder available in Black only. An optional polished die-cast aluminum 5-blade base is also available on both chairs and stools.

Casters

Casters are 60 mm O.D., double-wheel, high-impact thermoplastic and are available with hard (warm grey or black) or soft (black only) wheel surface.

Foot Ring

Task stools are equipped with a twist-to-lock, adjustable-height, 20” diameter chrome-plated steel foot ring with black, die-cast aluminum hub and spokes.

ChangeUp™ Tablet Arm

ChangeUp tablet support is integral to the chair frame and consists of a 7/8” diameter solid steel rod welded to the front and rear support tubes. A three-piece molded plastic armrest is included and attached to the chair frame using a #10 x 2 1/2” Phillips pan head tapping screw.

The tablet mechanism consists a die-cast aluminum housing, upper and lower plastic bearings, and 11-gauge steel clamp and tablet board support plates. The tablet mechanism is clamped onto the chair frame over two plastic bushing halves and a 5/16” diameter by 1 3/4” hardened steel pin with a die-cast aluminum cap secured with two 1/4-20 x 3/4” button socket head cap screws. The pin creates a solid 90° up/down pivot stop and the bushings provide a smooth, quiet operation. In the use position, the tablet mechanism rotates outward from the chair back an additional 20° and permits approximately 3 1/2” of adjustment for ingress/egress without stowing the tablet.

The tablet worksurface is 21” wide by 13 1/2” deep (235 square inches) is secured to the tablet board support plate with twelve #12 x 5/8” Phillips flat head tapping screws. The tablet board is made of 18 mm Baltic Birch plywood with .040” high-pressure laminate top surface and .02” thick phenolic backer surface for an overall board thickness of approximately 3/4”. Edges are lacquered with a clear finish and sealed. The factory installed tablet assembly is not field installable and may not be removed.

Weight Rating

ChangeUp tablet arm can support a 250 lb static load

Compliance

Doni seating is designed and manufactured to meet or exceed required ANSI/BIFMA X5.1-2011 Seating. Seat functional weight rating for Doni task chair is 400 lb, and seat functional weight rating for Doni task stool is 350 lb, as conducted by and within KI's Accredited Test Lab.

Seat Shell and Backrest Articulation Mechanism

The backrest and seat are injection-molded polypropylene. The seat and backrest are joined by a pair of hidden articulation mechanisms, each consisting of a 14-gauge steel housing, twin 7-gauge levers and steel coil springs. While maintaining a one-piece shell appearance, this mechanism allows the backrest to recline up to 17 degrees of motion.

Optional Upholstered Seat and Back

Urethane foam is attached to an injection-molded polypropylene liner board, then upholstered using a draw-string process. Seat foam is molded nominal 1" thickness, and back foam is nominal 1/2" thickness. The flush-head fasteners that attach the back pad are color-matched to the polypropylene.

Under-seat Structure

Support structure is a die-drawn 12-gauge steel plate. Structure is finished with baked-on electrostatically-applied 30-degree gloss epoxy powder-coat paint.

Tandem Base

Cast aluminum alloy leg section. 14-gauge 1" x 2" seamless steel column. Upright and base are painted monochromatic with beam and yoke. Columns are welded to a plate which clamps onto beam.

In-Line Table

Solid core top is 20" x 20" x 7/8" with a vinyl bullnose edge.

Corner Table

Solid core top is 30" x 30" x 7/8" with a vinyl bullnose edge.

INFORMATION

C.O.M. Testing and Production Requirements

Not all materials are suitable for upholstering this product. A 1 yd. x 54" sample must be submitted and approved prior to acceptance of an order. If the fabric is directional in pattern or weave, the direction must be indicated on the submitted sample, and additional yardage may be requested.

Test samples must be sent to:

KI
Attn: C.O.M. Specialist
1687 Westminster Drive - Gate 3
Green Bay, WI 54302
