Kore® Work Carts

Designed by Daniel Korb

# FOR ENVIRONMENTS ON THE MOVE

Swiss architect Daniel Korb designed Kore Work Carts to support the different ways we work and interact. Creating a sense of community is important, but just as important is recognizing the needs of the individual. Today’s generation of workers expect the workplace to be informal, flexible and healthy, with a balance of privacy and collaboration within the environment to support their changing needs. That is why the starting point of the design of Kore Work Carts is human needs, simplicity and added value.

With a largely mobile workforce, there is a change from individual “ownership” of workspace to a shared “usership” of the workspace.

Today we need simple products that can quickly adapt and adjust to the needs of the individual and the needs of the organization.

Kore Work Carts address a variety of needs and offers choices. The quick customization and mobility allow for a fluid workspace that can rapidly expand, contract, reconfigure, or even relocate at a moment’s notice.

Kore Work Carts provide the right tools to support today’s evolving environments.

## FLEXIBLE WORKSPACE

Today, the need for mobility translates into versatility and flexibility. The Kore Work Cart is a mobile workstation that provides privacy plus efficiency while maximizing space. A rechargeable battery enables technology integration without being constrained to a single location, while pneumatic height adjust transfers the work area from sitting to standing simply, and without any power requirement.
