Worksurface grommet

If a grommet is not specified, wires can be managed over the back edge of the desk, under the desk, and into the height adjustable shroud cutout

If a grommet is specified, wires can be managed through that grommet hole, under the desk, and over to the height adjustable shroud cutout

Optional wire management and power

A PS-77 power module and wire management tray can be added to the underside of the worksurface. Surface items would plug into the PS-77, and the PS-77 cord would route through the interior of the height adjustable column base

Cord routing

The front panel base is removable for user interior access. Cords will route down the interior of the base column, on the inside of height adjustable metal shroud. Cords would exit under the base, through the cutout on either side of the height adjustable mechanism

Standard base power

A standard black power module with three outlets is mounted in the back left corner of the base cabinet. One outlet is occupied by the plug for the height-adjustable base

The remaining two outlets are available for the PS-77 power module, and any additional power cords

The three outlet power module features a 9' cord. This cord would exit out of right cutout the base plate from the user side
