Key Test: ASTM E84/ACT 785

Client's Identification:

Style: Tweedy Twill 3064. Finish: None. Composition: 100% Polyester. Weight: 15 oz/yard.

Test Category: Tunnel Test Specifier: ACT LE 2023c; V 12/23 BG PC: ME

TEST PERFORMED: ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials [LE 2018a; V 9/18] --

As cited by the Association of Contract Textiles (ACT) Voluntary Performance Guidelines (December 2021)

APPROXIMATE THICKNESS OF SPECIMEN (as measured by SGS North America): 0.028"

SPECIMEN WEIGHT (to include substrate when applicable):

Prior to Conditioning: 2.7 lbs.

Stabilized Weight (taken twice within 24 hours): 2.7 lbs.

PRODUCT CATEGORY:

⊠ l extile	I ype	Product
------------	-------	---------

☐ Vinyl Type Product

☐ Other than Textile Type or Vinyl Type Product:

BRIEF DESCRIPTION OF TEST: This test method is used to determine the relative burning behavior of a material under defined test conditions. The test is performed in a 25 ft. long tunnel/duct-like apparatus and is often referred to as the "tunnel test". The test contemplates a calibration where Red Oak burns to the 24 ft. mark in 5.5 minutes \pm 15 seconds. During the actual test, a 24 ft. long x 23" wide specimen rests horizontally in a ceiling configuration inside the test chamber facing downward and toward two upward oriented burners. A furnace lid that rests in a water trough seals the chamber tight. A cement board placed on the backside of each specimen assembly protects the furnace lid during the test. The near face of the specimen is subjected to a 4.5 ft. flame insult of approximately 88 kW for ten minutes. The time and distance of the spread of flame along the length of the specimen and the smoke developed as read by the photometric system are all recorded. The Flame Spread and Smoke Developed are reported as an Index.

USA **Email:** aphadnis@designtex.com

Key Test: ASTM E84/ACT 785

CONCLUSION: Based on the reported Results and cited Acceptance Criteria, the item tested:

oximes Complies oximes Does not comply

DATA SUMMARY:

Time to Ignition (minutes:seconds): 00:12

Maximum Flame Spread "Distance" (feet): 0.2

Maximum Flame Spread "Time" (seconds): 25

CODE CLASSIFICATION: Based on the reported Results and cited Code Classification System, the item tested is assigned a:

- ☐ Class II or B rating
- ☐ Class III or C rating
- ☐ Fails to achieve a minimum classification thereby rendering the product unsuitable in terms of code requirement.
- ☐ Based on product performance*, ASTM E84 is not a suitable test method for the material.

CODE CLASSIFICATION SYSTEM:

	Flame Spread Index	Smoke Developed
Class I or A:	0 - 25	450 or less
Class II or B:	26 - 75	450 or less
Class III or C:	76 - 200	450 or less

CG Ver. 2021-03-09 10:35 Page 4 of 5

The results contained in this report relate only to the item(s) tested. The test report shall not be reproduced except in full, without written approval from SGS North America.

^{*} Severe melt, drip, delamination or other behavior that destroys the continuity of the flame front such that a valid flame spread is unobtainable (See "Remarks" on Page 2 of 4.)

USA **Email:** aphadnis@designtex.com

Key Test: ASTM E84/ACT 785

LIMITATIONS OF THE ASTM E84 CLASSIFICATION SCHEME: Most building codes will accept the ASTM E84 classifications when the interior finish product is used in a sprinklered area. Certain local authorities such as NYC have more stringent requirements, i.e. Smoke Developed ranges from a maximum 25 to 100.

If the interior finish product is a textile or vinyl wall covering used in a non-sprinklered area, the NFPA 265 room corner fire test applies.

Certain products which give off excessive heat such as but not limited to cellular plastics, cellular foam (either with or without coverings as applicable), polypropylene, and high density polyethylene should be tested by NFPA 286 - Standard Methods of Fire Tests for Evaluating Contribution of Wall and Ceiling Interior Finish to Room Fire Growth. In SGS North America's opinion, the codes require NFPA 286 for such products, even in sprinklered areas.

CERTIFICATION: I certify that the reported results were obtained after testing specimens in accordance with the procedures and equipment specified above.

Program: Steiner Tunnel (Version 1.0.3.0)

Test Method : ASTM E84
Report # : 3-55622-0-F
Test Date : 4/23/2024
Client : Ultrafabrics
Operator : Chris Gangi

Details of Preparation : The specimen was not adhered to any substrate. Instead, it was

laid over a 2" hexagonal wire mesh screen and 1/4" rods. The 24 ft. specimen was comprised of three 8 ft. sections butted end to

end.

Observations : No unusual observations

Results

Area Under Flame Curve (ft min) : 2.08
Raw Flame Spread Index : 1.07
Ignition Time (mm:ss) : 00:12
Area Under Smoke Curve (%A min) : 49.59
Raw Smoke Developed Index : 68.60
Total Gas Flow (ft³) : 56.3
Maximum Flame Front Achieved (ft) : 0.2 @ 25s

Flame Spread Index : 0
Smoke Developed Index : 70
Material Classification : A

CERTIFICATION: I certify that the above results were obtained after testing the specimens in accordance with the procedures and equipment specified by ASTM E84
