

BIFMA HCF 8.1. 2019 Healthcare Furniture Design - Guidelines for Cleanability Summary

The purpose of BIFMA HCF 8.1-2019 aims to guide manufacturers and specifiers, working within healthcare related projects, to better understand how products perform when exposed to specific cleaning and disinfectant methods. This testing method evaluates the resistance and compatibility of materials when exposed to these methods: including chemical solutions, UV light, and/or steam.

Note: This guideline does not address disinfection effectiveness; only the impact of the disinfection process on the product surfaces.

*This document is for woven products only. Please refer to the Coated Fabrics Cleaning Guideline for information regarding coated fabric cleanability.
